(This page intentionally left blank)

# **Project Summary**

## **Purpose**

The purpose of this analysis is to

1. Describe existing and proposed site conditions.
2. Provide detention calculations for the 2-yr, 5-yr, 10-yr, and 25-yr storm events.
3. Provide water quality calculations.

## **Project Location and Description**

The Bornstedt Views Subdivision will be constructed in 1 phase. The site is Tax Lot 100, Map 2S 4E 24C, and is 12.736 acres and is located on the east side of SE Bornstedt Road and just south of Jerger Street. Averill Parkway is currently stubbed to the north line of the subject site near the northeast corner.

The site is bisected by a steep ravine running northwest through the site. There are steep slopes on the property (greater than 35%) that will not be developed. The site is currently wooded on the easterly side and a pasture on the west side. This entire site drains to this ravine and then flows north to Tickle Creek. See the Existing Conditions Map in Appendix A.

## **Proposed Improvements**

The proposed 43-lot subdivision will consist of lots 7,500 sf and greater. A new detention pond will be constructed in the ravine on the south side of Maple Street. The pond will discharge into the existing drainage way on the north side of Maple Street.

The site improvements will include streets, curbs, sidewalks, and utilities. New storm sewer pipes, manholes, and catch basins will be installed to convey storm water to the new public detention systems. See the Developed Conditions Map in Appendix B

The following calculations will demonstrate that the total post-developed release rates from all of the design storm events will not exceed the pre-developed rates as required by the code.

## **Hydrograph Parameters**

### **Rainfall**

The rainfall distribution numbers were taken from the City of Sandy Stormwater Website (<http://www.ci.sandy.or.us/Stormwater/>)

Storm Recurrence Interval	Rainfall (inches)
2 year	3.50
5 year	4.50
10 year	4.80
25 year	5.50

### **Soils**

The soil data for this site is from *Soil Survey of Clackamas County, Oregon* published by the United States Department of Agriculture (USDA). The post-development soil is assumed to be the same as pre-development. Soil Type: 15B,C, and D, Cazadero silty clay loam. Hydrologic Group "C"

## Areas

Pre-developed area calculations are based on Existing Conditions Map in Appendix A. Post-developed area calculations are based on proposed designs of streets, curbs, and walkways and the proposed homes as shown on Developed Conditions Map in Appendix B.

Basin	
Pre-Developed	
Total Area	<b>12.739 ac</b>
Impervious Area	0.130 ac
Pervious Area	12.609 ac
Post-Developed	
Total Area	<b>12.739 ac *</b>
Impervious Area	5.529 ac
Pervious Area	7.210 ac

\* The developed impervious area is calculated by taking 100% of the proposed right-of-way to be dedicated and assuming that it is all impervious. There will be some pervious areas with the landscape strips so this is a conservative assumption. The total area also includes 3,500 sf per lot for on-site improvements. The total right-of-way area is 2.659 ac. The total lot impervious area is 2.732 acres (3,500 sf x 32 lots). There will be an extra 6,000 sf of impervious shared driveways and fire-turnarounds on site. The total developed impervious area is 5.529 ac.

## Curve Numbers

Curve Numbers are taken from the City of Portland Stormwater Management Manual, and the City of Portland Sewer and Drainage Facilities Design Manual.

Description	CN	Land Use Description
Pre-Developed	79	Soil Type "C" Portland SWMM Table A-8
Post-Developed Pervious Areas	70	Grass Lawn, Soil Group C Portland SDFDM Table 6-5
Impervious Areas	98	Buildings, AC, Sidewalks, etc.

## Time of Concentration

The times of concentrations ( $T_c$ ), were assumed for these preliminary calculations.

Basin	
Pre-Developed	35 minutes (assumed)
Post-Developed	5 minutes (assumed)

## Detention Sizing Results

Hydrographs for the drainage basins were determined using a spreadsheet based on the King County, Washington Hydrograph Program, version 4.21B, which uses the Santa Barbara Urban Hydrograph (SBUH) method. The Post-Development flows were routed through the detention facilities and flow control structures were designed to release the water at the Pre-Developed rates for the 2-year, 5-year, 10-year, and 25-year storm events per the City of Sandy Development Code 13.18 and the 2016 City of Portland Stormwater Management Manual standards that were adopted by reference into the Sandy Development Code.

### Detention System (Sizing Results)

The detention facility for this project will be a 3-deep detention pond. **The required storage volume is 15,366-cubic feet. The proposed pond shown on the planning maps can hold over 40,000-cubic feet.** At time of final engineering the pond will be graded as needed to match the minimum required storage. The orifices in the flow control manhole were designed to release the Post-Development Peak-Q's at or below the Pre-Developed Peak-Q's.

See Appendix C for more information and the detailed analysis.

<b>Basin, Detention Pond</b>				
Recurrence Interval (years)	Pre-Developed Outflow (cfs)	Developed Outflow (cfs)	Proposed Release Rates (cfs)	Reduction in outflow from Pre-Developed to Proposed
25	6.84	12.13	6.84	0%
10	5.40	9.99	5.39	0%
5	4.79	9.10	4.65	2%
2	2.90	6.27	2.79	4%

<b>Orifice Table</b>		
Detention Pond (Basin)		
Orifice	Dia. (inches)	Height (feet)
Bottom	8.18	0
Top	168 deg. Weir	2.1

## **Water Quality Design**

### **CDS Storm Water Treatment Device**

Two CDS manholes by Contech Stormwater Solutions will be designed for water quality for this site, one for each drainage basin, see details in Appendix D. The developed impervious area includes AC pavement, sidewalks, and roofs.

The flow (Q) from this runoff was calculated using the rational method ( $Q=CIA$ ) where:

Q = flow (cfs)

C = runoff coefficient = 0.90 for Pavement and Roofs

I = Intensity = 0.2 inches per hour (City of Sandy Water Quality Storm for an "on-line facility")

A = Impervious Area

#### **Basin**

$Q = (0.90) \times (0.2) \times (5.529) = 0.995$  cfs (total site).

The Contech Stormwater Solutions Treatment Device Model CDS2015-5-C has a treatment capacity of 1.1 cfs and will be used for water quality for this site.

## **Conclusion**

In accordance with the City of Sandy requirements, on-site detention has been designed to maintain existing downstream storm water runoff characteristics and a water quality system has been designed to provide adequate treatment. These calculations demonstrate that the detention and water quality systems are more than adequately sized for the proposed development. Detailed calculations will be completed with the final engineering plans as needed. The final calculations will include an upstream basin analysis to make sure the storm pipes are adequately sized to convey the upstream water through the site.

PER JASON SMITH, MS CASTLE-ROSE ENVIRONMENTAL: DEBRIS ACCUMULATION AT FENCE IS WHAT HAS CREATED A "DAM EFFECT" - ANALOGOUS TO A BEAVER DAM ON A STREAM. WITHOUT THAT DEBRIS AT THE FENCE - THE STREAM WOULD NOT SPREAD OUT AND SLOW DOWN. HOWEVER, WATER STILL VISIBLY FLOWS, INCLUDING UNDERNEATH THE DAM AS STORM FLOWS ABATE. PROPER WAY TO MAP THIS IS AS A TEMPORARY WIDE AREA OF THE STREAM, RATHER THAN A SEPARATE WETLAND, SINCE THE IMPEDIMENT IS NOT A NATURAL FEATURE.

OFF-SITE WETLAND DOES NOT INTRUDE SOUTH

NOTE ALL "YELLOW" AND "GRAY" TREES TO BE REMOVED WITH DEVELOPMENT.

NOTE "GREEN" AND "YELLOW" TREES MEET THE TREE RETENTION REQUIREMENTS, SEE ARBORIST REPORT. ALL GREEN TREES WILL BE SAVED. SEE TREE PROTECTION PLAN.

NOTE THE SUBJECT SITE IS PARCEL 3 PARTITION PLAT 2018-045. MONUMENTS WERE FOUND AND HELD AND THE MEASURED DISTANCE MATCH CLOSELY TO THE PLAT. SEE PP 20018-045. THIS PLAT HELD THE CENTERLINE OF THE A3 TRAVELED WAY OF SE BORNSTEDT ROAD TO DETERMINE THE RIGHT-OF-WAY. SEE RECORD OF SURVEY 9N 2022-026 RECORDED 1-20-22, TO BE USED AS THE BOUNDARY FOR THIS PLAT

**Project Name: The Bornstedt Views - Pond**  
**Detention System Summary**

Job # 19-268  
 Date: 4/25/2022

Note: The detention system design is based on the King County Model "Facility Design Routine".

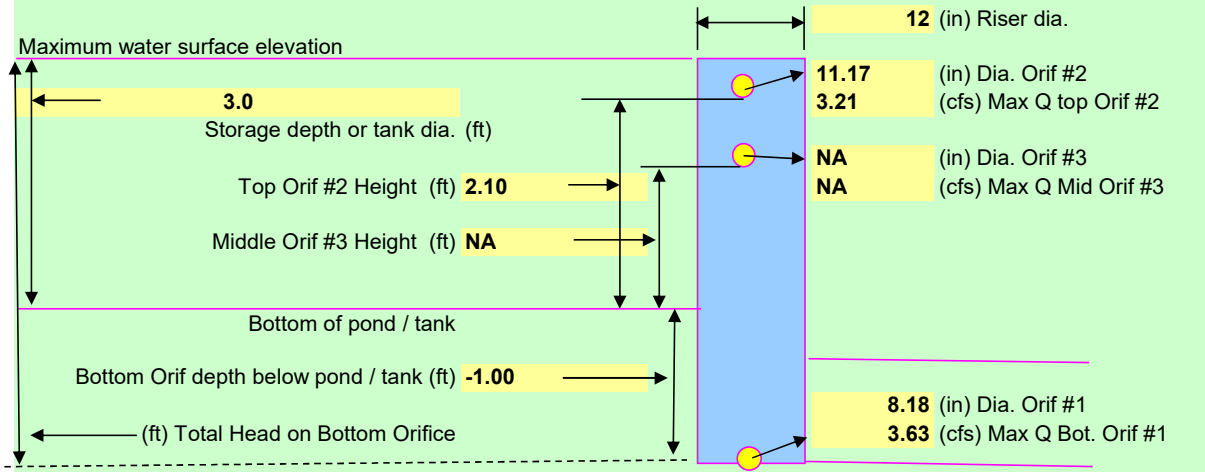

<b>1) Detention Facility Design Input:</b>		
2) Type of facility:	DETENTION POND	
3) Pond side slopes:	3 to 1	
<b>4) Pond storage depth:</b>	<b>3 ft (from bottom of pond to overflow)</b>	
5) Vertical permeability	0 min/in	
6) Number of orifices:	2	
7) Riser dia. =>	12 in	
8) Orifice coefficient	0.62 (typically 0.62)	
9) IE - bottom orifice:	-1 ft (distance below bottom of pond - Negative #)	
10) Max Q Bottom Orif. #1	3.63 cfs	
11) Top Orif #2 Height =	2.1 ft	
12) Max Q Mid Orif. #3	0.00 cfs	Orifice not being used
13) Mid Orif #3 Height =	0.00 ft	Orifice not being used

**Detention Facility Design Results:**

Performance year	Developed Inflow cfs	Pre-Developed Outflow cfs	Actual Outflow cfs	Peak Stage ft	Storage cf
100	0	0	0	0	-
25	12.13	6.84	<b>6.84</b>	3.00	15,366

# Project Name: The Bornstedt Views - Pond Rectangular, Sharp Crested Weir Calculations

Job # 19-268  
Date: 4/25/2022

Weir Equation:  $Q = C(L-0.2H)H^{3/2}$

- Q = Flow over weir (cfs)
- C =  $3.27 + 0.40 H/P$  (ft)
- L = Adjusted length of weir ( $L_a - 0.1H \times 2$ ) this is to account for side constraints
- $L_a$  = Actual length of weir along pipes interior circumference (ft)
- H = Distance from bottom of weir to maximum head (ft)
- P = Distance from bottom of weir to outfall invert elevation (ft)
- D = Inside riser pipe diameter (in)
- < = Angle of opening for weir (maximum 180 degrees)

**Given:**

Q	3.21	cfs
H	0.90	ft
P	3.10	ft
D	12	in

**Find:**

C	3.39	ft
L	1.29	ft
<b><math>L_a</math></b>	<b>1.47</b>	<b>ft</b>
<	<b>169</b>	<b>degrees</b>

## Appendix D

### Water Quality Manhole Detail

I:\AD\_CONTECH\CPI\COMMON\CAD\TREATMENT\22\_CDS\40\_STANDARD\_DRAWINGS\ONLINE (CDS-C)\DWG\CDS2020-5-C-DTL.DWG 9/25/2015 8:17 AM

**PLAN VIEW B-B**  
N.T.S.

**ELEVATION A-A**  
N.T.S.

THIS PRODUCT MAY BE PROTECTED BY ONE OR MORE OF THE FOLLOWING U.S. PATENTS: 5,788,846; 6,841,725; 6,911,566; 6,981,776. RELATED FOREIGN PATENTS, OR OTHER PATENTS PENDING.

**CDS2020-5-C DESIGN NOTES**

CDS2020-5-C RATED TREATMENT CAPACITY IS 1.1 CFS [31.2 L/s], OR PER LOCAL REGULATIONS. MAXIMUM HYDRAULIC INTERNAL BYPASS CAPACITY IS 14.0 CFS [396 L/s]. IF THE SITE CONDITIONS EXCEED 14.0 CFS [396 L/s], AN UPSTREAM BYPASS STRUCTURE IS REQUIRED.

THE STANDARD CDS2020-5-C CONFIGURATION IS SHOWN. ALTERNATE CONFIGURATIONS ARE AVAILABLE AND ARE LISTED BELOW. SOME CONFIGURATIONS MAY BE COMBINED TO SUIT SITE REQUIREMENTS.

**CONFIGURATION DESCRIPTION**

- GRATED INLET ONLY (NO INLET PIPE)
- GRATED INLET WITH INLET PIPE OR PIPES
- CURB INLET ONLY (NO INLET PIPE)
- CURB INLET WITH INLET PIPE OR PIPES
- SEPARATE OIL BAFFLE (SINGLE INLET PIPE REQUIRED FOR THIS CONFIGURATION)
- SEDIMENT WEIR FOR NJDEP / NJCAT CONFORMING UNITS

**FRAME AND COVER**  
(DIAMETER VARIES)  
N.T.S.

**SITE SPECIFIC DATA REQUIREMENTS**

STRUCTURE ID			
WATER QUALITY FLOW RATE (CFS OR L/s)		*	
PEAK FLOW RATE (CFS OR L/s)		*	
RETURN PERIOD OF PEAK FLOW (YRS)		*	
SCREEN APERTURE (2400 OR 4700)		*	
PIPE DATA:	I.E.	MATERIAL	DIAMETER
INLET PIPE 1	*	*	*
INLET PIPE 2	*	*	*
OUTLET PIPE	*	*	*
RIM ELEVATION			
*			
ANTI-FLOTATION BALLAST	WIDTH	HEIGHT	
	*	*	
NOTES/SPECIAL REQUIREMENTS:			
* PER ENGINEER OF RECORD			

**GENERAL NOTES**

1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. FOR SITE SPECIFIC DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHT, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. [www.contechES.com](http://www.contechES.com)
3. CDS WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING. CONTRACTOR TO CONFIRM STRUCTURE MEETS REQUIREMENTS OF PROJECT.
4. STRUCTURE SHALL MEET AASHTO HS20 LOAD RATING, ASSUMING EARTH COVER OF 0' - 2', AND GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION. CASTINGS SHALL MEET AASHTO M306 AND BE CAST WITH THE CONTECH LOGO..
5. IF REQUIRED, PVC HYDRAULIC SHEAR PLATE IS PLACED ON SHELF AT BOTTOM OF SCREEN CYLINDER. REMOVE AND REPLACE AS NECESSARY DURING MAINTENANCE CLEANING.
6. CDS STRUCTURE SHALL BE PRECAST CONCRETE CONFORMING TO ASTM C-478 AND AASHTO LOAD FACTOR DESIGN METHOD.

**INSTALLATION NOTES**

- A. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
- B. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE CDS MANHOLE STRUCTURE.
- C. CONTRACTOR TO INSTALL JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS AND ASSEMBLE STRUCTURE.
- D. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT INLET AND OUTLET PIPE(S). MATCH PIPE INVERTS WITH ELEVATIONS SHOWN. ALL PIPE CENTERLINES TO MATCH PIPE OPENING CENTERLINES.
- E. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO ASSURE UNIT IS WATER TIGHT, HOLDING WATER TO FLOWLINE INVERT MINIMUM. IT IS SUGGESTED THAT ALL JOINTS BELOW PIPE INVERTS ARE GROUTED.
