3

OSU Master Gardener™ Mission

Cultivating resilient and healthy communities throughout Oregon through sustainable horticulture education and gardening projects that are rooted in science and that are supported by OSU Extension volunteers.

4

OSU Master Gardener™ Program

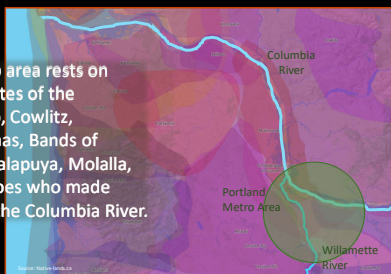

Helps Oregonians grow healthy gardens
Provides gardening information rooted in science
More than 3,000 trained volunteers provide 200,000 volunteer hours and 250,000 contacts annually
Requires annual volunteer recertification

5

Land Acknowledgement

The Portland Metro area rests on traditional village sites of the Multnomah, Wasco, Cowlitz, Kathlamet, Clackamas, Bands of Chinook, Tualatin Kalapuya, Molalla, and many other tribes who made their homes along the Columbia River.

6

Fall and Winter Gardening

Now's the time to plan and plant!

Benefits

- Grow and eat your own vegetables year round
- Maximize production in a small space
- Use less water
- Manage fewer pests

7

Fall and Winter Gardening

- Select the Right Location
- Test and Amend the Soil
- What to Plant
- When to Plant
- Growing Tips
- Hands-on Activity
 - Make-Your-Own Pots and Plant Seeds

8

Location... Location... Location

- Level Site or Lay Out Rows Perpendicular to Slope
- Raised Beds
- Sunlight
- Warmth
- Good Drainage
- Water
- Accessibility
- Wind Protection

9

Fall is a Great Time to Test Your Soil

A soil sample will tell you what your soil needs to help your crop grow.

It provides information on the capacity of your soil to supply adequate nutrients and helps you select the correct mix of fertilizer and liming materials.

<https://extension.oregonstate.edu/video/how-do-i-collect-soil-sample-testing>

10

Collect and Analyze a Soil Sample

Sample Collection

- Multiple location composite
- Root zone: top 6 to 8 inches

Sample Analysis and Interpretation

- Macronutrients (N, P, K, Ca, Mg, S)
- pH
- Organic Matter
- Micronutrients
- Wait to add nutrients until next year

11

Fall is a Really Great Time to Amend Soil pH

Pacific Northwest soils west of the Cascades are mildly acidic: pH 5.5-5.8

Good for blueberries and lingonberries that grow best at pH 4.5-5.5.

Most vegetable crops grow best at a pH 6.0-7.5

12

Add Lime to Neutralize Acidity

Neutralize soil acidity; raise the soil pH

Supply calcium and magnesium

Promote root growth

Create an excellent environment for soil organisms that break down organic matter

Improve soil structure

Reduce damage from some soil-borne pathogens

Soil pH Testing

Lab Testing

- pH only: \$12 plus sample shipping
- pH, N-P-K, and organic matter: \$15.
- pH, N-P-K, organic matter and micronutrients: \$35.

Home Testing

- pH kit (10 tests): \$7
- pH (4 tests) and N-P-K (2 tests each) kit: \$8

16

What to Plant

Choose cool season crops
 Select fastest maturing varieties for late plantings
 Crops should be well established but not yet mature if you want to leave in ground for winter harvest (e.g., carrots, beets, turnips)

17

Cool Season Crops for Fall and Winter

<p>Root Vegetables</p> <ul style="list-style-type: none"> • Beet* • Carrot • Leek • Radish* • Rutabaga • Turnip* • Garlic  	<p>Leafy Vegetables</p> <ul style="list-style-type: none"> • Asian Greens • Cabbage • Chard • Kale • Lettuce • Mustard / Arugula • Spinach  	<p>Edible Flowers and Seeds</p> <ul style="list-style-type: none"> • Broccoli • Cauliflower • Fava Bean • Peas  
---	--	---

* Tops are edible as greens

18

When to Plant

Plants need time to mature before cold weather and short days

Number of days from seeding or transplant to harvest

- Days from seed or days from transplant
- Average harvest period
- Two week Fall factor - plants grow more slowly during the cool temperatures and short days of fall and winter

19

Turnip

Varieties: Purple Top White Globe (photo), Golden Ball, Tokinashi

Planting and Spacing: Direct seed and thin, 12-16" row spacing; 4-6" plant spacing

Cultural Information: 3-10 days to germinate; 50 days to harvest; store in garden; min. temp. 10°

20

Beet

Varieties: Lutz Green Leaf, Albina Verduna, Boldor, White Albino, Red Ace

Planting and Spacing: Direct seed and thin, 12-16" row spacing; 4-6" plant spacing

Cultural Information: 7-10 days to germinate; 60 days to harvest; harvest when roots reach desired size or store in garden under straw mulch; older roots can be woody; harvest before temperatures reach 15-20; min. temp. 15°

21

Carrot

Varieties: Bolero, Merida, Royal Chantenay

Planting and Spacing: Direct seed (seed tape); 12-16" row spacing; 2-3" plant spacing

Cultural Information: 10-17 days to germinate (slow to germinate – don't give up); 70 days to harvest; store in garden; min. temp. 15°

May Jun Jul Aug Sept Oct Nov Dec Jan Feb Mar

University of Maryland Extension
Home Gardener
METRO AREA

22

Asian Greens

Varieties: Pac Choi, Bopak, Joi Choi (photo), Violetta (purple), Ching Chiang (dwarf)

Planting and Spacing: Direct seed and thin or use transplants; seed for transplants July 1 - Aug 15; transplant 4-6 weeks later; 18-36" row spacing; 12-18" plant spacing

Cultural Information: 2-14 days to germinate; 40 days to harvest; direct seed or transplant at 4-5 true leaves; min. temp. 10° (possibly lower)

May Jun Jul Aug Sept Oct Nov Dec Jan Feb Mar

University of Maryland Extension
Home Gardener
METRO AREA

23

Lettuce

Varieties: Photo starting in lower left and going clockwise: Continuity, Artic King, Drunken Woman Frizzy, Rhodos (endive); Winter Density (romaine), Oak Leaf

Planting and Spacing: Direct seed and thin or use transplants; seed for transplants Aug 1-31; transplant ~4 weeks later; 16-18" row spacing; 6-8" plant spacing

Cultural Information: 2-15 days to germinate; 60 days to harvest

May Jun Jul Aug Sept Oct Nov Dec Jan Feb Mar

University of Maryland Extension
Home Gardener
METRO AREA

24

Mustards / Arugula

Varieties: Mizuna, Dragon Tongue, Arugula

Planting and Spacing: Direct seed and thin (broadcast or in rows); 16-18" row spacing; 2-3" plant spacing

Cultural Information: 2-15 days to germinate; 45 days to harvest for baby greens; min. temp. 20° (possibly lower)

May Jun Jul Aug Sept Oct Nov Dec Jan Feb Mar

University of Idaho
Invasive Species
Extension Center
Master Gardener
METRO AREA

25

Pea

Varieties: Green Arrow (photo, shelling), Alaska Early (shelling), Oregon Sugar Pod II

Planting and Spacing: Direct seed; 18-24" row spacing; 1-2" plant spacing

Cultural Information: 8-25 days to germinate; 65 days to harvest; min. temp. 20° (possibly lower); harvest frequently to keep plants producing; climbing cultivars require support

26

Fall and Winter Growing Tip

Use Row Covers...

Row covers offer protection from rain, wind and cold weather
Adds warmth
Year-round protection from insects but...
Monitor closely for pests that might get under the cover and find the perfect microclimate in which to proliferate (e.g., aphids)

27

Mulch and Cover Crops: Benefits

Both...

- Inhibit weed growth
- Reduce erosion
- Improve water infiltration
- Increase organic matter
- Reduce soil compaction

Mulch*

- Protect crops from cold weather

Cover Crops*

- Retain or add back nutrients

28

Mulch

Each material offers a different set of benefits

- Forestry bi-products (shredded bark, wood chips, sawdust, etc.)
- Coffee bags
- Straw
- Shredded leaves
- Lawn clippings
- Newspapers or cardboard

29

Cover Crops

Cover crops are plants grown to both cover and improve the soil. They may be used as a mulch on the soil surface, or they can be tilled into the soil as a "green manure."

30

Cover Crops: Grasses and Legumes

Use grasses to compete with weeds, establish quickly (reducing erosion), and capture available nitrogen left over at the end of the growing season.
Use legumes to add nitrogen to your soil.

31

Cover Crops: Grasses and Legumes

Use grasses to compete with weeds, establish quickly (reducing erosion), and capture available nitrogen left over at the end of the growing season.
Use legumes to add nitrogen to your soil.

32

Cover Crops: Planning and End Game

In the Fall:

- If you intend to plant crops in March: plant a grass
- If you intend to plant crops in April or May: plant a legume

In the Spring:

- Terminate cover crop by cutting, mowing or tilling into soil
- Terminate before cover crop goes to seed and at least 2 to 4 weeks before planting spring crops; allow more time if growth is very dense

33

Cover Crops: Helpful Hints

Common vetch

Purchase seed early
Plant a small area of your garden to compare performance
Use a succession of cover crops as areas come out of summer production

34

Cover Crops: Legumes

Crop	Benefits and Notes*	Planting Rate in Cups per 100 ft ²	Planting Dates								
			Aug		Sept		Oct				
			Begin	End	Begin	End	Begin	End			
Hairy vetch	Reliable legume	0.5									
Common vetch		0.5									
Crimson clover	Erosion fighter, easy to incorporate	0.25									
Red clover	Competes with weeds, good for poor soils	0.125									
Austrian winter pea	Quick growth, not for wet soils	1									
Fava bean	Leave some in place for spring harvest	1									

*These legumes are recommended for planting during the cool season west of the Cascades. Other crops are better suited to planting during the summer months. All are nitrogen sources and soil builders.

35

Cover Crops: Grasses

Crop	Benefits and Notes*	Planting Rate in Cups per 100 ft ²	Planting Dates								
			Aug		Sept		Oct				
			Begin	End	Begin	End	Begin	End			
Cereal rye	Competes with weeds, hardy, reliable	1									
Winter wheat	Soil builder	1									
Winter oats	Competes with weeds	1.5									
Annual ryegrass	Soil builder, tolerates wet soils	0.5									
Spring barley	Erosion fighter, competes with weeds, may winterkill	1									
Spring oats	Competes with weeds, winterkill likely	1.5									

*All are nitrogen scavengers, grow quickly to provide cover in the fall, and recommence growth rapidly in the spring.

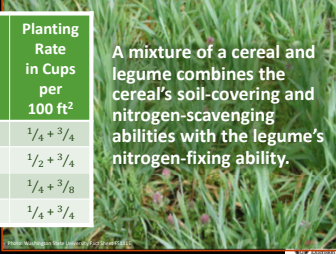

36

Cover Crops: Try a Mixture

Crop Mixture	Planting Rate in Cups per 100 ft ²
Annual ryegrass + Austrian winter pea	1/4 + 3/4
Winter oats + common vetch	1/2 + 3/4
Annual ryegrass + crimson clover	1/4 + 3/8
Cereal rye + Austrian winter pea	1/4 + 3/4

A mixture of a cereal and legume combines the cereal's soil-covering and nitrogen-scavenging abilities with the legume's nitrogen-fixing ability.

37

Favas

Varieties: Aquadulce; Sweet Lorane, Windsor (photo)

Planting and Spacing: Direct seed in rows or broadcast (as cover crop); 12-30" row spacing; 3-6" plant spacing

Cultural Information: 8-15 days to germinate; 240 days to harvest; overwinter as cover crop and mulch in early spring or harvest in May; if using as cover crop, cut back one month before spring planting to allow time for some decomposition; min. temp. 15°

University of Maryland System
Integrated Crop Management Center

38

Starts

Materials

- Seeds
- Six packs or other small containers (e.g., yogurt cups)
- Potting soil
- Labels

Benefits

- Start fall crops while summer crops are still in the ground
- Better weed control

University of Maryland System
