SUPPLEMENTAL APPLICATION
DESIGN REVIEW / CONDITIONAL USE PERMIT

(Please print or type the information below)

Planning Department
39250 Pioneer Blvd.
Sandy OR 97055
503-668-4886

Name of Project Sandy Health Clinic

Location or Address 39831 Hwy 26, Sandy, OR 97055

Type of Business Health clinic with primary care, behavioral health, and dental services

Products Manufactured none

Hours of Operation Monday through Friday, 8am-6pm

No. of Employees per Shift staff of 10-12 individuals

Total Site Size 0.47 acre Total Bldg. Square Footage 9,459 SF

Project Summary

Demolition of existing 6,700 sf, one-story building, construction of a health clinic building and associated site work. Health clinic will provide primary care, behavioral health, and dental services. The clinic will be 9,381 GSF and one-story.

USES WITHIN BUILDING (SQUARE FOOTAGE)

Offices: 3,777 SF Shop: _____ Storage: 431 SF

Kitchen: _____ Laundry: _____ Rest Rooms: 283 SF

Other: 4,890 SF

OCCUPANCY & CONSTRUCTION TYPE

(List all occupancies by square footage)

UBC Occupancy Rating: B

UBC Type of Construction: V-B

Will fire sprinklers be installed in the building? ☑ Yes ☐ No

SITE ANALYSIS DATA		
Type	**Lot Coverage (Square Feet)**	**Lot Coverage (Percent of Site)**
Buildings	9,381	46%
Parking Lots and Driveways	5,393	27%
Private Walks & Pedestrian Ways	2,210	11%
Landscaping – Improved Area	2,999	15%
Landscaping – Natural areas	0	0%
Storm Water Detention, Retention & Bioswale Areas	288	1%
Other (describe)		
Other (describe)		

CONSTRUCTION MATERIAL DETAILS

Color & Type of Siding Materials: horizontal redwood fiberboard; vertical weathered copper fiberboard

Color & Type of Trim Materials: Sturgis gray painted wood trim; Ebony split face CMU base material

Color & Type of Roof Materials: Gray standing seam metal roof

Color & Type of Exterior Doors: Sturgis gray painted hollow metal doors

Color & Type of Exterior Stairs, Balconies & Railings: Strugis gray painted exterior railings

Trash & Recycling Enclosure (describe type, colors, height):

Ebony color split face CMU enclosure; 10 feet wide x 8 feet deep x 11 feet 5 inches tall

Type of Lighting Fixtures (describe):

Pole: D-Series LED, 25 feet tall, charcoal color (S1 fixture) (match pole fixtures at police station)

Wall-Mounted: SY302 Series LED wall up/down light (S3 fixture)

Fencing (height and type): 8 feet tall, vertical stained wood fencing

Mailboxes (location and type): Mail is received internally at the reception area

Private Pedestrian Walkways (type of surfacing): Concrete

Recreational Amenities (describe type and location):

No recreational amenities provided other than outdoor seating.

Other Site Elements (describe):

Boulders, Powder-coated aluminum planters, Heavy timber benches, Monument sign, Steel bike rack

TYPE OF IRRIGATION SYSTEM

Describe type and brand of irrigation system to be installed. Formal irrigation plans must be submitted with construction plans.

Basis of design is Rain Bird Sales, Inc. electric solenoid controlled underground irrigation system, with low point self drain

PROPOSED SOIL AMENDMENTS

Describe soil conditions and proposed plans for soil treatment & amendments:

Geotechnical engineer will test the native soils once site clearing has been completed, to review the construction parameters.

ADDITIONAL LANDSCAPING INFORMATION

The shrubs used for parking screen are evergreen and will grow into a hedge (17.92.50.G). Parking lot/new street trees were selected for hardiness and fall color. Per section 17.92.50.A, the plans exceed 75% of planted required landscaping areas. Sizes indicated on following page meet or exceed caliper, gallon, or height requirements. Vines indicated are 1 gallon size but are not used as a physical barrier requirement. Groundcovers selected are either flowering or evergreen and will fill in in under the 3 yrs required (17.92.50.I). Other plant selections were made based on regional-appropriateness, owner maintenance, visual interest, and bloom/scent for staff/visitors.

LANDSCAPE MATERIALS				
Quantity	Type – Include botanical and common names. Plants must be keyed to landscape plan.	Size	Height	Spacing
9	Nyssa Sylvatica 'Hayman's Red' / Red Rage Tupelo	2" cal		
18	Ilex Crenata 'Steeds' / Upright Holly	7 gal	6 ft	
10	Osmanthus Xfortunei 'San Jose' / Sweet Tea Olive	3 gal		
66	Ophiopogon Planiscapus 'Nigrescens' / Mondo Grass	3 gal		
28	Delphinium Elatum / Magic Fountain Mix	3 gal		
55	Carex Morrowii 'Aurea-Variegata' / Varigated Japanese Sedge	3 gal		
2	Clematis Armandii 'Apple Blossom' / White Evergreen Clematis	1 gal		
110 SF	Carex Obnupta / Slough Sedge	1 gal		12"
110 SF	Juncus Effusus / Soft Rush	1 gal		12"
2600 SF	Potentilla N. 'Nana' / Cinquefoil	1 gal		18"
1500 SF	Euonymus 'Coloratus' / Purple Winter Creeper	1 gal		18"

Land Use / Design Reviews

Application Requested	Type II Design Review (2) Type II Adjustments, please see Sections B.3 and E.2 in the Building Design Standards, below. Sections are highlighted in red for clarity.
Pre-Application Conference	Conference held December 18th, 2019
Design Review Application	Submittal: Feb 12, 2020

Site Description

Site Address:	Sandy Health Clinic 39831 HWY 26 Sandy, OR 97055
Jurisdiction:	Sandy, OR / Clackamas County
Map & Tax Lot Numbers:	T2S, R4E, Section 13; Tax Lot 24E13AD01001
Parcel Number:	01830433
Total Site Area:	0.47 acres (20,473sf)
Zoning:	C-1 (Central Business District)
Current title Owner:	Clackamas County Health Centers 2051 Kaen Road, 3rd Floor Oregon City, OR 97045

Street classification

Hwy 26 / Mt. Hood Highway	Major Arterial roadway
SE Ten Eyck Road	Minor Arterial roadway
Pleasant Street	Local Street

Project Description

Overview

The project site is located between Hwy 26 / Mt. Hood Highway and Pleasant Street, at the corner of SE Ten Eyck Road. The site is generally flat, with an approximate 2 ½-foot slope rising from the north to south at the sidewalk along Hwy 26, and an approximate 2 ¾-foot slope rising from the north to the south at the sidewalk along Pleasant Street. The parcel currently has a vacant building that was previously a distribution center, and an auto dealership. Zoning is C-1. The building height limit is 45 feet.

The proposed construction is for a one story Type VB, sprinklered health clinic, with primary care, behavioral health, and dental services. The reception / waiting area will be accessed from the parking lot, between the Sandy police station and the new building, at the northeast corner of the building. There will be other access points facing Hwy 26 and Pleasant Street. The Sandy clinic will operate Monday through Friday with hours of 8am-6pm. For the proposed development, 6 of the required spaces of the off-street parking will be shared on site with the Sandy Police Station. A parking agreement with Immanuel Lutheran Church, northeast of the property, will accommodate all staff parking and overflow visitor parking.

Total gross floor area: 9,381 gsf

Parking stalls: 22 stalls including 1 accessible van space and 6 compact spaces.

Bike storage: 5% or 2 whichever is greater
2 total (2 ½ feet x 6 feet x 7 feet vertical) for commercial use

Project Code Summary

Occupancy: B - Business

Construction type summary: One-story
Type VB
NFPA 13 Sprinkler System throughout.

Max code height: 60 ft maximum
Building is approximately 28 ft high

Zoning Requirements Narrative

Zoning: C-1 (Central Business District)

Land Use Review process: Preapplication Conference (December 18th, 2019)
Type II Design Review procedure

17.42.00: This district is intended to provide the community with a mix of retail, personal services, offices, and residential needs of the community and its trade area in the city's traditional commercial core. This district is not intended for intensive automobile or industrial uses. This district is intended to provide the principal focus for civil and social functions within the community.

This commercial district is intended for civic uses and to provide all basic services and amenities required to keep the downtown the vital center of our community. While the district does not permit new low density building types, it is not intended to preclude dwelling units in buildings containing commercial activities. All development and uses shall be consistent with the intent of the district, as well as compatible with the space, access and exposure constraints and opportunities of the central city.

Zoning Requirements Narrative

Please see attached drawings for additional clarification regarding compliance.

Topic	Requirement	Chapter	Compliance
Permitted Uses	Commercial in buildings with up to 30,000 sf of gross floor area and without drive-through facilities	17.42.10.B.2.g	Medical facilities permitted outright.
Development Standards	Lot Area: No minimum Lot Dimensions: No minimum Setbacks: No minimum; maximum 10 ft Lot Coverage: No maximum Landscaping: 10% minimum Structure Height: 45 ft maximum	17.42.30.A	Lot Area: Comply Lot Dimensions: Comply Setbacks: Comply Lot Coverage: Comply Landscaping: 14% provided Structure Height: 28 ft
Special Setbacks	Property abutting a more restrictive zoning district shall have the same yard setback as required by the abutting district. Pleasant Street: Across street from more restrictive R-2., requiring 10 ft minimum setback and additional 10 ft added for each 10 ft increment in building height over 35 ft.	17.42.30.B	10 ft minimum setback provided from north property line.
Landscaping Preservation	Significant plant and tree specimens should be preserved to the greatest extent practicable.	17.92.10.C	Significant trees are currently at the sidewalks along Hwy 26 and Pleasant Street and will be preserved in the design. Trees will be preserved during construction by construction fences.
Planter Sizing	Planter and boundary areas used for required plantings shall have a minimum diameter of 5 feet.	17.92.10.D	Planted areas are 5 feet wide, minimum.
Planting Vision Clearance	Plantings or other screening is not permitted within vision clearance areas.	17.92.10.E	Tall plantings and screens are kept back from the street intersections.
Pedestrian Amenities	Up to 35% of the total required landscaped area may be developed into pedestrian amenities.	17.92.10.F	Area developed for pedestrian amenities are the civic space near the main entry and the internal courtyard / break area. Spaces are less than 35% total landscaped area.
Landscaping Extent	All areas not occupied by paved roadways, walkways, patios, or buildings shall be landscaped.	17.92.10.K	Complies.

Topic	Requirement	Chapter	Compliance
Minimum Landscaping and Screening Improvements	10% required for C-1 zone (2,047 SF)	17.92.20	15% (2,999 SF) provided.
Required Tree Plantings	1 medium canopy street tree at 30 feet on center. 1 medium parking lot tree per 8 cars (8 / 21 total cars = 2.6 trees)	17.92.30	Compliant street trees and parking lot trees provided. See Landscape Plan L1.01.
Irrigation	Landscaping to be irrigated to sustain viable plant life	17.92.40	Electric solenoid controlled underground irrigation system, with low point self drain will be used.
Types and Sizes of Plant Materials	A. 75% landscape area to be combination of trees, shrubs, or evergreen ground cover. B. Use native plant materials acclimatized to the Pacific Northwest. C. Trees with a mature spread of crown greater than 15 feet should have trunks with maintained clear condition of over 5 feet of clear wood. D. Deciduous trees to be balled and burlapped, minimum of 7 feet in overall height or 1 ½" in caliper 6" above the ground. E. Coniferous trees to be minimum of 5 feet above the ground at time of planting. F. Shrubs to be a minimum of 1 gal in size or 2 feet in height. G. Hedges to form a continuous, solid visual screen within 2 years after planting. H. Vines for screening to be minimum of 1 gal. or 30" in height. I. Groundcover to be fully rooted and well branched or leafed and provide complete coverage in one year. J. Turf areas to be species normally grown as permanent lawns in western Oregon. K. Landscaped areas may include architectural features or artificial ground cover not to exceed 25% of the required landscaped area.	17.92.50	A. Complies B. Complies C. Complies D. Complies E. Complies F. Complies G. No hedges in design. H. Vines not used for site screening. I. Complies J. No turf in design. K. Design includes benches, boulders, aluminum planters, wood fences, dark brown mulch, stone pavers, and a monument sign that do not exceed 25% of the landscaped area.
Landscaping Between Public Right-of-Way and Property Lines	Except for portions allowed for parking, loading, or traffic maneuvering, a required setback area abutting a public street and open area between property and roadway in the public street to be landscaped.	17.92.70	Area between property line and public streets are landscaped except where there is a sidewalk or driveway.

Topic	Requirement	Chapter	Compliance
Screening	A. Height and Opacity B. Chain Link Fencing C. Height Measurement D. Berms	17.92.90	A. Wood fencing is 8'-0" tall and at least 80% opaque. B. Not in project. C. Screen height is measured from the finished grade of screened improvements. D. Not in project.
Screening of Service Facilities	Equipment and trash and recycling areas to be screened.	17.92.100	The site transformer and condensing unit are screened, and the trash enclosure is CMU to match the building base material.
Off Street Parking Requirements	For medical office / clinic use: **<u>Number of car parking spaces</u>**: 1 per 300 sf, plus 1 per 2 employees **<u>Number of bike parking spaces</u>**: 5% or 2 whichever is greater	17.98.20	**<u>Car parking spaces</u>**: 8,345 GSF / 300 = 27.81 stalls 25% reduction for C-1 zone = *20.86 (21) required stalls.* 6 of these required stalls are shared with the police station. 12 staff, *6 staff parking stalls* at Immanuel Lutheran Church parking lot via agreement with church. **<u>Bike parking spaces:</u>** 27 stalls x 5% = 1.4 *2 required bike spaces area provided near the main entry.*
Accessible (ADA) Parking Stalls	1 accessible parking space required for parking facility with 1 to 25 stalls.	2010 ADA Standards Table 208.2	1 van accessible parking stall provided

Topic	Requirement	Chapter	Compliance
Parking Lot Design and Size	No more than 35% of parking stalls shall be compact spaces. 90 degree parking aisle width: 20 feet single sided one-way, 25 feet double sided two-way	17.98.60	6 compact spaces / 22 total spaces = 27%, therefore ok All parking it 90 degree. 25 foot aisle provided off of Pleasant Street. 17'-3" aisle provided at south end of site, near compact parking stalls. This is larger than the approximately 14 foot aisle that currently exists at the south end of the 6 shared stalls. If a stall needs to be removed to provide a 20 foot space, there will be one parking stall fewer than required. Because these stalls are compact, 17'-3" will be adequate for cars to back up into the aisle.
On-Site Circulation	Groups of more than 3 parking spaces shall be provided with adequate aisles or turnaround areas so that all vehicles enter the right-of-way in a forward manner.	17.98.70	Complies
Driveway	Driveway to an off-street parking area shall be a minimum of 20 feet for a two-way drive for the first 20 feet of the driveway. Shall not traverse a slope in excess of 15% at any point along the driveway length.	17.98.100	Complies
Landscaping and Screening	Between, and at the end of each parking bay, there shall be planters that have a minimum width of 5 feet and a minimum length of 17 feet for a single depth bay and 34 feet for a double bay. Each planter shall contain one major structural tree and ground cover.	17.98.120.D	Complies. Please see Site Plan and Landscape Plan
Paving	Parking areas, driveways, aisles, and turnarounds shall be paved with concrete, asphalt, or comparable surfacing, constructed to city standards for off-street vehicle areas.	17.98.130.A	Permeable asphalt will be used for the parking lot surface.

Topic	Requirement	Chapter	Compliance
Drainage	Provide adequate provisions for collection of drainage waters to eliminate sheet flow of water onto sidewalks, public rights-of-way, and abutting private property.	17.98.140	Permeable asphalt will be used for the parking lot surface.
Lighting	Artificial lighting to be provided at parking.	17.98.150	See sheet E1.02 – Electrical Site Lighting Plan.
Bicycle Parking Facilities	A. Location B. Bicycle Parking Space Dimensions C. Security D. Signing	17.98.160	A. Bike parking is located next to the primary building entrance, visible from the reception/waiting room, separated from the vehicular parking area, with direct access to the public right-of-way. B. Each of the (2) bike parking spaces are 2 ½ feet by 6 feet, covered with a vertical clearance of 12 feet. C. Bikes can be locked to a provided bike rack with both cable and U-shaped locks, permitting the frame and one wheel to be secured. Bike rack is anchored to the ground and sheltered under a roof overhang. D. Bike parking is visible from the entry and public right-of-way, so no signage is needed.
Off-Street Loading Facilities	A. minimum area of loading zone to be 250 sf. B. Loading berth to be 10 feet by 35 feet minimum with a height clearance of 14 feet. C. Loading areas to be screened from public view with the same screening as parking lots. F. Off-street loading facilities not required when buildings abut a public alley in a way that loading can be conducted from the alley in accordance with applicable traffic and parking ordinances.	17.98.190	F. Loading will be conducted from clinic side of parking lot. Loading will be conducted off clinic hours. Deliveries anticipated at this clinic will be smaller in quantity due to requirements of the building program.

Building Design Standards Narrative

SANDY DESIGN STANDARDS (17.90.110)	PROPOSAL RESPONSE
A Site Layout and Vehicle Access	
A.1. Lot shall abut or have cross access to a dedicated public street	• The lot has access to Hwy 26/Mt Hood Hwy and Pleasant Street
A.3. Off street parking located to the rear or side of buildings, with no portion of the lot within required setbacks or within 10-feet of the public right-of-way. Driveways for ingress or egress shall be limited to one per 150 ft.	• Parking lot is an extension of the police station parking lot and sited between the two buildings. All portions of the lot are within required setbacks.
A.4. Adjacent parking lots shall be connected to one another when the City determines it is practicable to do so.	• Parking lot is an extension of the police station parking lot and sited between the two buildings.
A.5. Urban design details shall be used to calm traffic and protect pedestrians in parking areas.	• Sidewalk crossing the driveway will be a different paving material than the parking lot.
A.8. Raised walkways or painted crossings from public street sidewalk to building entrance(s).	• There is a different paving material used from the sidewalk to the main building entrance.
A.12. Free-standing buildings shall be connected to one another with a seamless pedestrian network that provides access to building entrances and civic spaces.	• The sidewalks along Pleasant Street and Hwy 26 connect to the health clinic and police station entrances.
B Building Facades, Materials, and Colors	
B.1. Articulation	• 1) All elevations facing public streets are broken into 30 feet or shorter. Each plane projects or recedes 24 inches from the adjacent plane. • 2) Wall planes incorporate visually contrasting and complimentary trim.
B.2. Pedestrian Shelters	• a) Shelter over building's main entry is provided by roof projecting over entry. Metal canopies are provided over the other entries. • b) Canopies, roof overhangs, and alcoves are provided. • c) Overhang over entry projects 5 feet to protect pedestrians. • d) Shelter over main entry is extension of roof with same roof slope.
B.3. Building Materials	• a) Building is architecturally unified by palette of earth tone material colors, continuous gabled roof form, and repeated dormer/pop-out language.

	• b) Building has a 36-inch base of Ebony colored, split-faced concrete block veneer with running bond pattern. Type II adjustment, based on notes from pre-application meeting: Percentage of gaps in base material is 18%. Please see Base Material Diagram on Sheet G1.30. • c) Foundation is sheathed with the split-faced concrete block veneer. • d) Siding above veneer base consists of horizontal wood textured fiberboard sizing (redwood color), vertical ribbed fiberboard panels (1 5/8" ribs and weathered copper color) • e) Building elevations facing a public right-of-way or civic space incorporate the following features: - Wood door and window trim and fascia - Metal canopies - Metal brackets – these are cosmetic metal applied to the ends of the extruded framed walls, labeled "break metal trim" on the exterior elevations • f) Materials required on elevations visible from abutting public streets turn the corner and are consistent around the full perimeter of the building.
B.4. Colors	• a) Color palette is warm earth tones and wood look. Material colors are noted in B.3. section above. Exterior paint for trim and fascia is Miller Historic color H119 Sturgis Gray • b) Black color is only used for metal canopies • c) No day-glow or reflective colors are used.
C Roof Pitch, Materials, and Parapets	
C.1. Gabled Roof Pitch	• Primary roof forms are 6:12, except at the east roof. East roof is 4 feet wider than the rest of the roofs, so the pitch is 5 5/8:12 to allow the ridges to be at the same level. 6:12 pitch is only required for new buildings with a span of 50 feet or less. Portion of roofing at 5 5/8:12 is 62'-8" wide due to building program needs. Secondary roof forms are 4 1/2:12.
C.2. Secondary Roof Forms	• Secondary roof forms comprise of 13% of roof area. (1,514 secondary roof area, 11,624 total roof area)
C.3. Gable	• Gable ends of the roof face Hwy 26, the intersection of Hwy 26 and SE Ten Eyck Road, and the parking lot. The gable facing the parking lot, and part of the main entrance, is visible from Pleasant Street.
C.4. Secondary Roof Form Quantities	• (2) secondary roof forms on the 76'-7" length of roof facing Ten Eyck. (2) secondary roof forms on the 114'-11" length of roof facing Pleasant Street.
C.5. Roof Materials	• Roofing is a standing seam metal roof, color is gray.
C.6. Roof and Wall Mounted Equipment	• There is no rooftop equipment other than an approximately 12" tubular skylight centered on the roof. Mechanical and electrical equipment is internal in dedicated rooms and in the attic space.

D Building Orientation and Entrances	
D.1. Orientation	• More than 50% of the building's street frontage is within 10 feet or a sidewalk or civic space. The edges of the building are as close to the property line as allowed. No off-street parking is placed between the building and adjacent streets.
D.2. Parking Placement	• Not applicable
D.3. Ground Floor Connection	• Ground floor spaces are connected to the sidewalks along Pleasant Street and Hwy 26.
D.4. Corner Entrance	• There is a door into the building within 40 feet of the corner at the intersection of Ten Eyck and Hwy 26, and an door into the building within 40 feet of the corner at the intersection of Ten Eyck and Pleasant Street. A direct corner entrance is not practical due to the nature of the building's use as a health clinic and its relation to the parking lot. The corners have detailing consistent with the Sandy Style.
D.6. Activated Pedestrian Environment on two Elevations	• There is an entrance with a pedestrian shelter facing Hwy 26 and facing Pleasant Street, however, due to the nature of the clinic, these are staff entrances, not customer entrances. The patient entrance faces the parking lot. Patients may leave the other (2) doors, but these are primarily intended for clinic staff.
D.7. Primary Entry Spacing	• Due to the nature of the medical clinic, entrances are spaced further than 30' apart. There is no public retail as a part of this building.
D.8. Primary Entrance Architecture	• The roof overhangs the main entrance by 5' and there is a bench and landscaped elements to emphasize it. There is a metal canopy over the other entrances, with landscaping near these entries.
E Windows	
E.1. Unified Design	• There are only 4 different sizes of windows in this design, and their headers, sills, and mullions are in consistent planes in relation to each other.
E.2. Ground Floor Windows	• Type II adjustment: Percentage of window area on Hwy 26 elevation is 27%. Percentage of window area on SE Ten Eyck Road elevation is 28%. Percentage of window area facing Pleasant street is 23%. Due to the use of the building as a clinic, it is not practical to have 40% windows on (2) of these frontages. The building GSF is just shy of 10,000 SF, which only requires 25% window area, which we are meeting on (2) frontages. • a) Typical windows have a sill 3 feet above grade. • b) Windows are square and vertically oriented. • c) Windows are divided into panes that are smaller than 6 feet. • d) Windows have 4 inch wood trim around them.
E.4. Prohibited Windows	• a) None of the windows are darkly tinted or mirrored.

	• b) Storefront windows are located at the entrance. The rest of the windows are vinyl.
F Landscaping and Streetscape Design	
F.1. Landscape and Screening General Standards (Chapter 17.92)	• Please see Chapter 17.92 sections in the Zoning Requirements Narrative above.
F.2. Streetscape Design Conflicts	• There are no conflicts with the Streetscape design and Landscaping and Screening General Standards.
G Civic Space	
G.1. Percent of Ground Floor Area	• The civic space near the main entry to the clinic is 3% of the ground floor area. (320 SF / 9,381 SF).
G.2. Dimensions and Area	• The civic space is 19'-8" across and 320 SF.
G.3. Type	• The civic space is an extension of the sidewalk in front of the clinic entrance, with benches for seating, and doubles as a zone for patients to await pick-up.
G.4. Location	• The civic space is located roughly mid-block, near the entrance, which will be a zone with higher pedestrian activity.
G.5. Adjacency to Right-of-Way	• The civic space is directly adjacent to the sidewalk on Pleasant Street, with rectangular stone pavers to identify it. This space is not gated or otherwise closed to public access.
H Lighting	
H.1. Chapter 15.30, Dark Sky Ordinance	• Streetscape lighting conforms to the Downtown Sandy Streetscape Design and Dark Sky Ordinance. See sheet E1.02 – Electrical Site Lighting Plan. The area 10 feet beyond the property line receives no more than 0.25 of a foot-candle of light and the new lighting does not exceed 4,125 Kelvins.
H.2. Integration	• Site lighting is situated to highlight the architectural design of the clinic and to compliment the site lighting at the nearby police station.
H.3. Safety	• Exterior can lights are integrated into the metal canopies over the entries. Walkways, parking lot, and entries are illuminated at 1.5-2.0 foot candles: see sheet E1.02 – Electrical Site Lighting Plan.
I Safety and Security	
I.1. Windows	• Windows are located around the full perimeter of the building, facing pedestrian, parking, and loading areas.
I.2. Interior Surveillance	• Windows are located so interior activity by be seen from all public right-of-ways, however, due to the nature of the building as a medical clinic, internal shades will be used to provide patients and staff with privacy as needed. The police station is also right

	next to the clinic, which will aid in surveillance of the site.
I.3. Street Address	• 8" tall street address numbers are near south entry, near the intersection of Hwy 26 and Pleasant Street, shown on sheet A3.11, elevation 6.
I.4. On-Site Lighting Orientation	• Site lighting is placed to provide adequate surveillance of on-site activities. See sheet E1.02 – Electrical Site Lighting Plan.
J External Storage and Screening	
J.1. Exterior Storage	• There will be no exterior storage of merchandise or materials.
J.3. Equipment Screening	• Mechanical condensing unit and transformer are screened from view with wood landscape fencing. Garbage storage is screened within trash enclosure.
J.4. Trash Screening	• Trash and recycling storage is in a split face CMU enclosure in the southeast corner of the site. Enclosure CMU matches the color of the concrete block veneer base of the building. And the metal roof of the trash enclosure matches the metal roofing color.

SHEET NOTES

1. SEE SHEET C0.1 FOR GENERAL SHEET NOTES.
2. CONTRACTOR MAY STAGE WITHIN LIMITS OF DEMOLITION.
3. REMOVE ALL SITE COMPONENTS AND RECYCLE COMPONENTS AS REQUIRED IN THE SPECIFICATIONS.
4. ALL TRADE LICENSES AND PERMITS NECESSARY FOR THE PROCUREMENT AND COMPLETION OF THE WORK SHALL BE SECURED BY THE CONTRACTOR PRIOR TO COMMENCING DEMOLITION.
5. THE CONTRACTOR SHALL PRESERVE AND PROTECT FROM DAMAGE ALL EXISTING RIGHT-OF-WAY SURVEY MONUMENTATION DURING DEMOLITION. THE CONTRACTOR IS RESPONSIBLE FOR COORDINATING AND PAYING FOR THE REPLACEMENT BY A LICENSED SURVEYOR OF ANY DAMAGED OR REMOVED MONUMENTS.
6. PROTECT ALL ITEMS ON ADJACENT PROPERTIES AND IN THE RIGHT OF WAY INCLUDING BUT NOT LIMITED TO SIGNAL EQUIPMENT, PARKING METERS, SIDEWALKS, STREET TREES, STREET LIGHTS, CURBS, PAVEMENT AND SIGNS. CONTRACTOR SHALL BE RESPONSIBLE FOR RESTORING ANY DAMAGED ITEMS TO ORIGINAL CONDITION.
7. PROTECT STRUCTURES, UTILITIES, SIDEWALKS, AND OTHER FACILITIES IMMEDIATELY ADJACENT TO EXCAVATIONS FROM DAMAGES CAUSED BY SETTLEMENT, LATERAL MOVEMENT, UNDERMINING, WASHOUT AND OTHER HAZARDS.
8. SAWCUT STRAIGHT LINES IN SIDEWALK, AS NECESSARY.
9. CONTRACTOR IS RESPONSIBLE TO CONTROL DUST AND MUD DURING THE DEMOLITION PERIOD, AND DURING TRANSPORTATION OF DEMOLITION DEBRIS. ALL STREET SURFACES OUTSIDE THE CONSTRUCTION ZONE MUST BE KEPT CLEAN.
10. PROTECT ALL EXISTING UTILITY STRUCTURES AND UNDERGROUND MAINS TO REMAIN.
11. PROTECT ALL EXISTING VEGETATION TO REMAIN.

PROVIDED: 15% (2,999 SF TOTAL)

GENERAL NOTES - SITE PLAN

1. REFER TO SHEET A0.01 FOR 'PROJECT NOTES' APPLICABLE TO ALL PORTIONS OF THE WORK.
2. GENERAL CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND CONDITIONS PRIOR TO CONSTRUCTION, CONFLICTS ARE TO BE BROUGHT TO THE ATTENTION OF THE ARCHITECT PRIOR TO THE START OF CONSTRUCTION RELATED TO SUCH.
3. REFER TO CIVIL DRAWINGS FOR GRADING AND UTILITY INFORMATION.
4. CONTRACTORS SHALL VERIFY ALL LOCATIONS OF EXISTING UTILITIES, CARE SHOULD BE TAKE TO AVOID DAMAGE TO OR DISTURBANCE OF EXISTING UTILITIES.
5. REFER TO CIVIL AND LANDSCAPE DRAWINGS FOR ALL PUBLIC RIGHT-OF-WAY IMPROVEMENTS.
6. REFER TO LANDSCAPE DRAWINGS FOR QUANTITY AND LOCATION OF LANDSCAPED AREAS.
7. THE CONSTRUCTION SHALL NOT RESTRICT A FIVE-FOOT CLEAR UNOBSTRUCTED ACCESS TO ANY WATER OR POWER DISTRIBUTION FACILITIES (POWER POLES, PULL BOXES, TRANSFORMERS, VAULTS, PUMPS, VALVES, METERS, APPURTENANCES, ETC.) OR THE LOCATION OF THE HOOK-UP.
8. THE CONSTRUCTION SHALL NOT BE WITHIN 10' OF ANY POWER LINES - WHETHER OR NOT THE POWER LINES ARE LOCATED ON THE PROPERTY. FAILURE TO COMPLY MAY CAUSE CONSTRUCTION DELAYS OR ADDITIONAL EXPENSES.

GENERAL NOTES - ROOF PLANS

1. REFER TO SHEET A0.01 FOR 'PROJECT NOTES' APPLICABLE TO ALL PORTIONS OF THE WORK.
2. SEE SHEET A0.31 FOR HORIZONTAL ASSEMBLIES.
3. PROVIDE POSITIVE ROOF SLOPE TO DRAIN AT MINIMUM SLOPE OF 1/4" PER FOOT MEASURED ALONG VALLEYS, UNLESS NOTED OTHERWISE.
4. ROOF PENETRATIONS SHOWN ARE SCHEMATIC IN NATURE; COORDINATE ACTUAL SIZE, TYPE AND LOCATION OF EQUIPMENT, CURBS, AND ANY OTHER ROOF PENETRATIONS THAT MAY BE REQUIRED TO SUPPORT, SECURE OR FLASH ROOFTOP EQUIPMENT.
5. COMPLY WITH THE MOST STRINGENT OF SMACNA, NRCA OR MANUFACTURERS' REQUIREMENTS FOR FLASHINGS, COPINGS AND OTHER SHEET METAL CONSTRUCTION.
6. VERIFY ROOFING MANUFACTURERS MINIMUM REQUIREMENTS FOR LAPPING OF ALL MATERIALS. BRING CONFLICTS WITH ARCHITECTURAL DETAILS TO THE ATTENTION OF THE ARCHITECT PRIOR TO INSTALLATION.
7. SEE MEP DRAWINGS FOR ROOFTOP EQUIPMENT AND PENETRATIONS.

DESIGN REVIEW

DATE	PROJECT NUMBER
4.3.2020	192530

SHEET NUMBER
G1.30

F. Exterior Lighting Plan

CODE NOTES - ELECTRICAL

A. THE ELECTRICAL INSTALLATION SHALL BE IN ACCORDANCE WITH ALL LOCAL, STATE, AND NATIONAL CODES.
B. THE CURRENT ADOPTED EDITION OF THE ELECTRICAL CODE SHALL BE THE STANDARD FOR THE ELECTRICAL INSTALLATION. VERIFY WITH LOCAL OFFICIALS WHEN PERMITS ARE OBTAINED. NOTIFY DESIGN TEAM OF ANY DESCREPANCIES BETWEEN THE PROJECT MANUAL OR DRAWINGS AND THE GOVERNING CODE.
C. INSTALLATION SHALL FOLLOW ALL REQUIREMENTS OF THE ADAAG – AMERICANS WITH DISABILITIES ACT.
D. REFER TO PROJECT MANUAL AND PROJECT CODE REVIEW SHEET FOR LIST OF ALL APPLICABLE CODES.

GENERAL NOTES - ELECTRICAL

A. COORDINATE LOCATION/INSTALLATION OF MECHANICAL AND ELECTRICAL WORK WITH ALL OTHER TRADES. NO ASPECT OF A SYSTEM INSTALLATION OR ITS ROUGH-IN SHALL COMMENCE UNTIL PROPER AND TIMELY COORDINATION WITH ALL TRADES ASSOCIATED WITH THE INSTALLATION HAS OCCURRED. ITEMS TO BE COORDINATED SHALL INCLUDE BUT NOT BE LIMITED TO: BUILDING STRUCTURE, SHEET METAL, ALL PIPING SYSTEMS, LIGHT FIXTURES, CONDUITS, CABLE TRAYS, ETC. REFER TO ALL GENERAL, MECHANICAL, AND ELECTRICAL DRAWINGS AND SPECIFICATIONS FOR THIS PROJECT. ANY REWORK OF INSTALLED EQUIPMENT OR SYSTEMS WILL BE AT THE CONTRACTORS EXPENSE.
B. NOTE THAT THE ELECTRICAL DRAWINGS ARE ONLY A PORTION OF THE COMPLETE SET OF PLANS CONTRACT DOCUMENTS. THE COMPLETE SET CONTRACT OF DOCUMENTS SHALL BE USED TO DEFINE THE ELECTRICAL SCOPE OF WORK. THIS SHALL INCLUDE, BUT NOT BE LIMITED TO, USING THE ARCHITECTURAL PLANS FOR DIMENSIONS AND DETAILS; EQUIPMENT PLANS FOR ROUGH-IN REQUIREMENTS, AND THE MECHANICAL PLANS FOR EQUIPMENT SIZES AND LOCATIONS.

INSTALLATION NOTES - ELECTRICAL

A. CONTRACTOR SHALL FAMILIARIZE THEMSELVES WITH EXISTING CONDITIONS PRIOR TO BID.
B. ALL 120V-1 PHASE CIRCUITS EXCEEDING 100 FEET TO CENTER OF LOAD SHALL HAVE CONDUCTORS INCREASED TO ACCOUNT FOR VOLTAGE DROP.
C. RACEWAYS AND BOXES ARE SHOWN DIAGRAMMATICALLY ONLY AND INDICATE THE GENERAL AND APPROXIMATE LOCATION. THE LAYOUT DOES NOT NECESSARILY SHOW THE TOTAL NUMBER OF RACEWAYS OR BOXES FOR THE CIRCUITS REQUIRED, NOR ARE THE LOCATIONS OF INDICATED RUNS INTENDED TO SHOW THE ACTUAL ROUTING OF THE RACEWAYS.
D. ALL LIGHT FIXTURES, SWITCHES, DEVICES, ETC. ARE SHOWN IN PREFERRED LOCATION. E.C. RESPONSIBLE FOR MODIFYING CONDUIT, HANGERS, CIRCUITING, ETC. TO PROVIDE A COMPLETE AND OPERATIONAL SYSTEM.
E. ALL RECEPTACLE CIRCUITS SHALL HAVE DEDICATED NEUTRALS PER CODE.
F. PROVIDE A DEDICATED GREEN INSULATED GROUND CONDUCTORS TO ALL DEVICES. THE CONDUIT SYSTEM SHALL NOT BE USED AS THE ONLY EQUIPMENT GROUNDING METHOD.
G. DO NOT INSTALL DEVICES BACK TO BACK ON OPPOSITE SIDES OF WALL. MAINTAIN MINIMUM OF 8" DISTANCE BETWEEN WHEREVER APPLICABLE.
H. BALANCE THE LOAD ON PANELS AS EVENLY AS POSSIBLE DURING INSTALLATION. CIRCUIT NUMBERING SHOWN ON PLANS MAY BE ADJUSTED.
I. PROVIDE FINAL TYPED PERMANENT PANEL DIRECTORY AT PROJECT COMPLETION.
J. CONTRACTOR SHALL BE RESPONSIBLE FOR OPENINGS IN ALL WALLS CREATED BY THEIR WORK. PENETRATIONS SHALL BE SEALED IN ACCORDANCE WITH THE RATINGS OF THE AFFECTED WALL. REFER TO ARCHITECTURAL CODE PLAN FOR RATED WALLS.

LIGHTING FIXTURE SCHEDULE

NOTES:

1. ALL FIXTURES SHALL BE U.L. OR SIMILARLY LISTED.
2. REFER TO ARCHITECTURAL DOCUMENTS FOR EXACT MOUNTING LOCATIONS, DETAILS, AND CONFIGURATIONS OF ALL LUMINAIRES. IF ARCHITECTURAL DRAWINGS DO NOT CLARIFY EXACT MOUNTING LOCATION OR DETAIL, CONTRACTOR SHALL ISSUE AN RFI FOR ARCHITECT TO SPECIFICALLY CLARIFY PRIOR TO FIXTURE ROUGH-IN.
3. VERIFY COMPATIBILITY OF LIGHT FIXTURES WITH CEILING MATERIAL, ADJACENT CONSTRUCTION, AND ADJACENT FINISHES PRIOR TO SHOP DRAWINGS SUBMITTAL AND NOTIFY THE ARCHITECT OF ANY CONFLICTS WITH THE PROPOSED...
4. CONTRACTOR IS RESPONSIBLE FOR ALL MISCELLANEOUS HARDWARE NECESSARY TO INSTALL AND SUPPORT THE LUMINAIRES.
5. ADJUSTABLE INTERIOR AND EXTERIOR LIGHT FIXTURES SHALL BE TARGETED AND ADJUSTED BY THE CONTRACTOR UNDER THE OBSERVATION AND IN COMPLIANCE WITH RECOMMENDATIONS OF THE ARCHITECT. ALL LABOR AND MATERIAL COSTS MADE NECESSARY BY THIS REQUIREMENT SHALL BE INCLUDED.
6. CONTRACTOR IS RESPONSIBLE FOR OBTAINING AND FILLING OUT ALL UTILITY REBATE FORMS FOR OWNER.

TYPE	MANUFACTURER	MODEL	DESCRIPTION	VOLTAGE	LOAD-VA	LAMP TYPE	APPROVED EQUALS
D1			6IN LED RECESSED DOWNLIGHT, OPEN, 3500K	120 V	25 VA		AS APPROVED BY ENGINEER

G. LANDSCAPE PLAN

GENERAL NOTES - SITE PLAN

1. REFER TO SHEET A0.01 FOR 'PROJECT NOTES' APPLICABLE TO ALL PORTIONS OF THE WORK.
2. GENERAL CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND CONDITIONS PRIOR TO CONSTRUCTION, CONFLICTS ARE TO BE BROUGHT TO THE ATTENTION OF THE ARCHITECT PRIOR TO THE START OF CONSTRUCTION RELATED TO SUCH.
3. REFER TO CIVIL DRAWINGS FOR GRADING AND UTILITY INFORMATION.
4. CONTRACTORS SHALL VERIFY ALL LOCATIONS OF EXISTING UTILITIES, CARE SHOULD BE TAKE TO AVOID DAMAGE TO OR DISTURBANCE OF EXISTING UTILITIES.
5. REFER TO CIVIL AND LANDSCAPE DRAWINGS FOR ALL PUBLIC RIGHT-OF-WAY IMPROVEMENTS.
6. REFER TO LANDSCAPE DRAWINGS FOR QUANTITY AND LOCATION OF LANDSCAPED AREAS.
7. THE CONSTRUCTION SHALL NOT RESTRICT A FIVE-FOOT CLEAR UNOBSTRUCTED ACCESS TO ANY WATER OR POWER DISTRIBUTION FACILITIES (POWER POLES, PULL BOXES, TRANSFORMERS, VAULTS, PUMPS, VALVES, METERS, APPURTENANCES, ETC.) OR THE LOCATION OF THE HOOK-UP.
8. THE CONSTRUCTION SHALL NOT BE WITHIN 10' OF ANY POWER LINES - WHETHER OR NOT THE POWER LINES ARE LOCATED ON THE PROPERTY. FAILURE TO COMPLY MAY CAUSE CONSTRUCTION DELAYS OR ADDITIONAL EXPENSES.

LANDSCAPING:
REQUIRED: 10% MINIMUM (INCLUDING REQUIRED CIVIC SPACE) x 20,473 SF = 2,047 SF
PROVIDED: 15% (3,250 SF TOTAL)

G. Landscape Plan: Supplemental Information

GENERAL PLANTING NOTES:

A. DO NOT WILLFULLY PROCEED WITH PLANTING OPERATIONS WHEN IT IS OBVIOUS THAT UNKNOWN OBSTRUCTIONS AND GRADE DIFFERENCES EXIST THAT MAY NOT HAVE BEEN KNOWN DURING THE DESIGN PROCESS. BRING SUCH CONDITIONS IMMEDIATELY TO ATTENTION OF OWNER'S AUTHORIZED REPRESENTATIVE FOR RESOLUTION. ASSUME FULL RESPONSIBILITY FOR COSTS INCURRED AND REQUIRED MODIFICATIONS DUE TO LACK OF PROVIDING SUCH NOTIFI CATION.

B. ENSURE THAT FINISH GRADE ELEVATIONS OF PLANTING AREAS ARE SET AT THE PROPER ELEVATIONS RELATIVE TO PAVING FINISH SURFACE ELEVATIONS, UTILITY COVERS AND CURBS. SHRUB PLANTING AREAS AT 2" BELOW AND LAWN 1" BELOW ADJACENT GRADE. NOTIFY OWNER OF ANY DISCREPANCIES.

C. ASSURE POSITIVE DRAINAGE IN ALL PLANTING AREAS TO DRAIN AWAY FROM BUILDING, 2% MINIMUM.

D. PLANT MATERIAL, I.E. TREES, SHRUBS VINES, ESPALIERS AND GROUNDCOVERS, MUST BE APPROVED BY OWNER'S AUTHORIZED REPRESENTATIVE PRIOR TO INSTALLATION. PLANT MATERIAL INSTALLED WITHOUT OWNER'S AUTHORIZED REPRESENTATIVE'S APPROVAL MAY BE SUBJECT TO REMOVAL AND REPLACEMENT WITH RELATED COSTS BORNE BY CONTRACTOR.

E. FINAL LOCATIONS OF PLANT MATERIALS ARE SUBJECT TO APPROVAL OF THE OWNER'S AUTHORIZED REPRESENTATIVE PRIOR TO INSTALLATION. PERFORM THE FOLLOWING BEFORE BEGINNING PLANTING PIT EXCAVATION:
E.A. SHRUBS - PLACE ACTUAL PLANT CONTAINERS ON-SITE IN "FINAL" LOCATIONS.
E.B. TREES - PAINT OR STAKE CENTER OF TREE.

F. PLANTING SHALL NOT BE PERFORMED UNTIL PRE-PLANTING SOIL AMENDMENTS ARE COMPLETE AND APPROVED BY THE OWNER'S REPRESENTATIVE.

G. TOPSOIL SHALL BE UTILIZED IN ALL PLANTING AREAS TO THE MAXIMUM EXTENT FEASIBLE. TOPSOIL REMOVED DURING CONSTRUCTION ACTIVITY SHALL BE CONSERVED FOR LATER USE ON AREAS REQUIRING REVEGETATION AND LANDSCAPING.

H. SOIL AMENDMENTS SHALL BE PROVIDED IN ACCORDANCE WITH THE RECOMMENDATIONS OF THE FERTILITY ANALYSIS PROVIDED BY AND APPROVED SOIL TESTING LAB. SOILS SHALL BE THOROUGHLY LOOSENED TO A DEPTH OF NOT LESS THAN 8 INCHES AND SOIL AMENDMENT SHALL BE THOROUGHLY INCORPORATED INTO THE SOIL OF ALL LANDSCAPE AREAS TO A DEPTH OF AT LEAST 6 INCHES BY TILLING, DISKING OR OTHER SUITABLE PROCESSES.

I. IF CONFLICTS ARISE BETWEEN ACTUAL SIZE OF PLANTING AREAS ON-SITE AND THOSE AREAS INDICATED ON DRAWINGS, CONTACT OWNER'S AUTHORIZED REPRESENTATIVE FOR RESOLUTION. FAILURE TO MAKE SUCH CONFLICTS KNOWN TO OWNER'S AUTHORIZED REPRESENTATIVE IN A TIMELY FASHION MAY RESULT IN CONTRACTOR'S LIABILITY TO RELOCATE PLANT MATERIALS OR AT WORST CASE, BECOME UNABLE TO CHARGE OWNER FOR PLANT MATERIAL ALREADY PLANTED.

J. SHRUB AND GROUNDCOVER AREAS TO RECEIVE A 3-INCH DEEP LAYER MULCH TO BE SUBMITTED FOR APPROVAL FROM LANDSCAPE ARCHITECT.

K. IRRIGATION: ALL LANDSCAPE AREAS WITHIN THE SITE INCLUDING TURF, SHRUB BEDS AND TREE AREAS SHALL BE IRRIGATED WITH AN AUTOMATIC IRRIGATION SYSTEM. THE IRRIGATION SYSTEM SHALL BE ADJUSTED TO EMIT THE WATER REQUIREMENTS OF THE INDIVIDUAL PLANT MATERIAL.

L. PROVIDE ROOT CONTROL BARRIERS FOR ALL TREES PLANTED WITHIN 5' OF A HARDSCAPE EDGE SUCH AS PAVING, WALLS, STEPS, ETC. REFER TO PLANTING DETAILS FOR ADDITIONAL INFORMATION.

M. INSTALL PLANT MATERIAL WITH ITS BEST SIDE FACING PREDOMINATE VIEW OF PUBLIC.

N. PROVIDE THE PROPER SETBACK BETWEEN UTILITIES AND TREES - CONTACT CITY INSPECTOR FOR REQUIRED SETBACKS IN THE CASE THAT THE DRAWINGS ARE NOT CLEAR.

O. ALL WORK WITHIN THE PUBLIC RIGHT OF WAY UNDER SEPARATE PERMIT. SHOWN FOR REFERENCE ONLY. REFER TO APPROVED RIGHT OF WAY DRAWINGS PRIOR TO CONSTRUCTION.

P. REFERENCE CIVIL AND ARCHITECTURAL DRAWINGS FOR ADDITIONAL SITEWORK INFORMATION. .

Q. ALL WORK IN AREAS OF TREE PRESERVATION TO BE DONE USING HAND TOOLS WITH CARE TAKEN TO AVOID DAMAGE TO EXISTING TREE ROOTS, OR UNDER DIRECT SUPERVISION OF A PROJECT ARBORIST.

R. DO NOT MULCH AGAINST TREE TRUNK.

S. PLANT PER PLAN BUT NO CLOSER THAN 5 FEET TO TRUNK. ADJUST LOCATION OF NEW PLANTS AS NEEDED TO AVOID TREE ROOTS IF ENCOUNTERED DURING HAND DIGGING.

T. USE TEMPORARY DRIP IRRIGATION TO WATER PLANTS UNTIL ESTABLISHED, SEE IRRIGATION PLAN FOR MORE INFORMATION.

U. UNUSED.

V. PER VMC 20.925.115, PRIOR TO OCCUPANCY, A LICENSED LANDSCAPE ARCHITECT SHALL CERTIFY THAT ALL REQUIRED LANDSCAPING HAS BEEN PLANTED PER THE APPROVED PLANS.

PREPARATION, INSTALLATION AND MAINTENANCE OF NEW TREES

1. ALL TREES SHALL BE SECURELY STAKED OR GUYED.
2. ALL PLANT MATERIAL SHALL BE FREE OF ANY DEFECTS, OF NORMAL HEALTH, HEIGHT, LEAF DENSITY AND SPREAD APPROPRIATE TO THE SPECIES AS DEFINED BY THE AMERICAN ASSOCIATION OF NURSERYMEN (AAN) STANDARDS. ALL TREES SHALL BE BALL AND BURLAP OR EQUIVALENT.
3. ALL LANDSCAPING SHALL BE MAINTAINED FREE FROM DISEASE, PESTS, WEEDS AND LITTER.

MAINTENANCE NOTES FOR EXISTING TREES

1. WASH OFF FOLIAGE WHICH BECOMES SOILED DURING CONSTRUCTION.
2. WATER TREES AND OTHER VEGETATION WHICH ARE TO REMAIN AS NECESSARY TO MAINTAIN THEIR HEATH DURING THE COURSE OF THE WORK. RATE AND FREQUENCY OF APPLICATION TO BE DETERMINED BY PROJECT ARBORIST.
3. ALL PRUNING SHALL BE PERFORMED BY A CURRENT ARBORIST LICENSED WITHIN THE STATE/COUNTY/CITY WHERE THE WORK IS TO BE COMPLETED.

STORMWATER PLANTING NOTES

1. STORMWATER FACILITIES TO BE PLANTED & CONSTRUCTED PER CITY OF SANDY.
2. PLANT QUANTITIES MEET REQUIREMENTS OF CITY OF SANDY.
3. CONTRACTOR IS RESPONSIBLE FOR VERIFYING THAT THE REQUIRED CITY/COUNTY STORMWATER FACILITY INSPECTIONS HAVE BEEN PERFORMED AND APPROVED PRIOR TO PLACEMENT OF THE ENGINEERED SOIL.
4. REFER TO CIVIL ENGINEERS PLANS FOR SOIL (FG) FINISHED GRADE ELEVATION AND DEPTH PRIOR TO INSTALLING THE APPROVED TOPSOIL, IRRIGATION AND PLANTING ABOVE DRAIN ROCK AND PIPING.

LANDSCAPE CALCULATION NOTES

LANDSCAPE CALCULATIONS
DESCRIPTION

SIGHT DISTANCE TRIANGLE: ALL SHRUBS WITHIN THE SIGHT DISTANCE TRAINGLES SHALL BE MAINTAINED SO THAT FOLIAGE HEIGHT ABOVE PAVEMENT DOES NOT EXCEED 2.5 FT. STREET TREES WITHIN SIGHT DISTANCE TRIANGLE SHALL BE LIMBED UP TO A HEIGHT OF 10 FT. CONSISTENT WITH ALL A300 STANDARDS TO PROVIDE SIGHT DISTANCE VISIBILITY.

EXHIBIT D

S1 Fixture

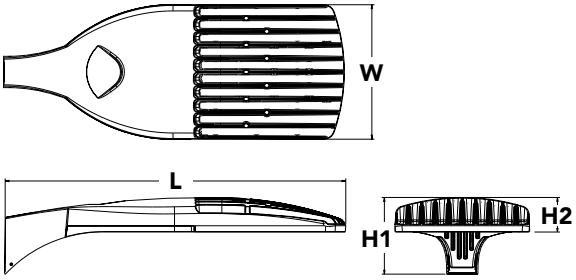
H. Sandy Health Clinic - Exterior Light Fixture Cut-Sheets

D-Series Size 1

LED Area Luminaire

Specifications

EPA:	1.01 ft² (0.09 m²)
Length:	33″ (83.8 cm)
Width:	13″ (33.0 cm)
Height H1:	7-1/2″ (19.0 cm)
Height H2:	3-1/2″
Weight (max):	27 lbs (12.2 kg)



Introduction

The modern styling of the D-Series is striking yet unobtrusive - making a bold, progressive statement even as it blends seamlessly with its environment. The D-Series distills the benefits of the latest in LED technology into a high performance, high efficacy, long-life luminaire.

The outstanding photometric performance results in sites with excellent uniformity, greater pole spacing and lower power density. It is ideal for replacing up to 750W metal halide in pedestrian and area lighting applications with typical energy savings of 65% and expected service life of over 100,000 hours.

A+ Capable options indicated by this color background.

Control options

Shipped installed

NLTAIR2	nLight AIR generation 2 enabled[7]
PIRHN	Network, high/low motion/ambient sensor[8]
PER	NEMA twist-lock receptacle only (controls ordered separate)[9]
PER5	Five-pin receptacle only (controls ordered separate)[9,10]
PER7	Seven-pin receptacle only (controls ordered separate)[9,10]
DMG	0-10v dimming wires pulled outside fixture (for use with an external control, ordered separately)[11]
DS	Dual switching[12,13,14]
PIR	High/low, motion/ambient sensor, 8-15′ mounting height, ambient sensor enabled at 5fc[15,16]
PIRH	High/low, motion/ambient sensor, 15-30′ mounting height, ambient sensor enabled at 5fc[15,16]
PIR1FC3V	High/low, motion/ambient sensor, 8-15′ mounting height, ambient sensor enabled at 1fc[15,16]
PIRH1FC3V	Bi-level, motion/ambient sensor, 15-30′ mounting height, ambient sensor enabled at 1fc[15,16]
FAO	Field adjustable output[14]

Other options

Shipped installed

HS	House-side shield[17]
SF	Single fuse (120, 277, 347V)[4]
DF	Double fuse (208, 240, 480V)[4]
L90	Left rotated optics[1]
R90	Right rotated optics[1]

Shipped separately

BS	Bird spikes[18]
EGS	External glare shield

Finish *(required)*

DDBXD	Dark bronze
DBLXD	Black
DNAXD	Natural aluminum
DWHXD	White
DDBTXD	Textured dark bronze
DBLBXD	Textured black
DNATXD	Textured natural aluminum
DWHGXD	Textured white

Ordering Information

Accessories

Ordered and shipped separately.

DLL127F 1.5 JU	Photocell - SSL twist-lock (120-277V) [19]

DLL480F 1.5 CUL JU	Photocell - SSL twist-lock (480V) [19]
DSHORT SBK U	Shorting cap [19]
DSX1HS 30C U	House-side shield for P1, P2, P3, P4 and P5[17]
DSX1HS 40C U	House-side shield for P6 and P7[17]
DSX1HS 60C U	House-side shield for P8, P9, P10, P11 and P12[17]
PUMBA DDBXD U*	Square and round pole universal mounting bracket (specify finish)[20]
KMA8 DDBXD U	Mast arm mounting bracket adaptor (specify finish) [6]
DSX1EGS (FINISH) U	External glare shield

For more control options, visit DTL and ROAM online.

NOTES

1 P10, P11, P12 or P13 and rotated optics (L90, R90) only available together.
2 Not available with HS.
3 MVOLT driver operates on any line voltage from 120-277V (50/60 Hz).
4 Single fuse (SF) requires 120V, 277V or 347V. Double fuse (DF) requires 208V, 240V or 480V.
5 Universal mounting brackets intended for retrofit on existing, pre-drilled poles only. 1.5 G vibration load rating per ANCI C136.31.
6 Must order fixture with SPA option. Must be ordered as a separate accessory; see Accessories information. For use with 2-3/8" mast arm (not included).
7 Must be ordered with PIRHN. Sensor cover available only in dark bronze, black, white and natural aluminum colors.
8 Must be ordered with NLTAIR2. For more information on nLight Air 2 visit this link.
9 Photocell ordered and shipped as a separate line item from Acuity Brands Controls. See accessories. Not available with DS option. Shorting cap included.
10 If ROAM® node required, it must be ordered and shipped as a separate line item from Acuity Brands Controls. Node with integral dimming.
11 DMG not available with PIRHN, PER5, PER7, PIR, PIRH, PIR1FC3V or PIRH1FC3V.
12 Provides 50/50fixture operation via (2) independent drivers. Not available with PER, PER5, PER7, PIR or PIRH. Not available P1, P2, P3, P4 or P5.
13 Requires (2) separately switched circuits with isolated neutral. See Outdoor Control Technical Guide for details.
14 Reference Motion Sensor table on page 4.
15 Reference controls options table on page 4 to see functionality.
16 Not available with other dimming controls options
17 Not available with BLC, LCCO and RCCO distribution. Also available as a separate accessory; see Accessories information.
18 Must be ordered with fixture for factory pre-drilling.
19 Requires luminaire to be specified with PER, PER5 or PER7 option. See PER Table on page 3.
20 For retrofit use only.

Performance Data

Lumen Ambient Temperature (LAT) Multipliers

Use these factors to determine relative lumen output for average ambient temperatures from 0-40°C (32-104°F).

Ambient		Lumen Multiplier
0°C	32°F	1.04
5°C	41°F	1.04
10°C	50°F	1.03
15°C	50°F	1.02
20°C	68°F	1.01
25°C	**77°F**	**1.00**
30°C	86°F	0.99
35°C	95°F	0.98
40°C	104°F	0.97

Projected LED Lumen Maintenance

Data references the extrapolated performance projections for the platforms noted in a **25°C ambient**, based on 10,000 hours of LED testing (tested per IESNA LM-80-08 and projected per IESNA TM-21-11).

To calculate LLF, use the lumen maintenance factor that corresponds to the desired number of operating hours below. For other lumen maintenance values, contact factory.

Operating Hours	Lumen Maintenance Factor
0	1.00
25,000	0.96
50,000	0.92
100,000	0.85

Motion Sensor Default Settings						
Option	Dimmed State	High Level (when triggered)	Phototcell Operation	Dwell Time	Ramp-up Time	Ramp-down Time
PIR or PIRH	3V (37%) Output	10V (100%) Output	Enabled @ 5FC	5 min	3 sec	5 min
*PIR1FC3V or PIRH1FC3V	3V (37%) Output	10V (100%) Output	Enabled @ 1FC	5 min	3 sec	5 min
*for use when motion sensor is used as dusk to dawn control.

Controls Options				
Nomenclature	**Descripton**	**Functionality**	**Primary control device**	**Notes**
FAO	Field adjustable output device installed inside the lumiaire; wired to the driver dimming leads.	Allows the lumiaire to be manually dimmed, effectively trimming the light output.	FAO device	Cannot be used with other controls options that need the 0-10V leads
DS	Drivers wired independantly for 50/50 luminaire operation	The luminaire is wired to two separate circuits, allowing for 50/50 operation.	Independently wired drivers	Requires two seperately switched circuits. Consider nLight AIR as a more cost effective alternative.
PER5 or PER7	Twist-lock photocell recepticle	Compatible with standard twist-lock photocells for dusk to dawn operation, or advanced control nodes that provide 0-10V dimming signals.	Twist-lock photocells such as DLL Elite or advanced control nodes such as ROAM.	Pins 4 & 5 to dimming leads on driver, Pins 6 & 7 are capped inside luminaire
PIR or PIRH	Motion sensors with integral photocell. PIR for 8-15' mounting; PIRH for 15-30' mounting	Luminaires dim when no occupancy is detected.	Acuity Controls SBGR	Also available with PIRH1FC3V when the sensor photocell is used for dusk-to-dawn operation.
NLTAIR2 PIRHN	nLight AIR enabled luminaire for motion sensing, photocell and wireless communication.	Motion and ambient light sensing with group response. Scheduled dimming with motion sensor over-ride when wirelessly connected to the nLight Eclypse.	nLight Air rSDGR	nLight AIR sensors can be programmed and commissioned from the ground using the CIAIRity Pro app.

Performance Data

Lumen Output

Lumen values are from photometric tests performed in accordance with IESNA LM-79-08. Data is considered to be representative of the configurations shown, within the tolerances allowed by Lighting Facts Contact factory for performance data on any configurations not shown here.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and system-level interoperability.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is A+ Certified when ordered with DTL® controls marked by a shaded background. DTL DLL equipped luminaires meet the A+ specification for luminaire to photocontrol interoperability1
- This luminaire is part of an A+ Certified solution for ROAM® or XPoint™ Wireless control networks, providing out-of-the-box control compatibility with simple commissioning, when ordered with drivers and control options marked by a shaded background[1]

To learn more about A+, visit www.acuitybrands.com/aplus.

1. See ordering tree for details.
2. A+ Certified Solutions for ROAM require the order of one ROAM node per luminaire. Sold Separately: Link to Roam; Link to DTL DLL

FEATURES & SPECIFICATIONS

INTENDED USE
The sleek design of the D-Series Size 1 reflects the embedded high performance LED technology. It is ideal for many commercial and municipal applications, such as parking lots, plazas, campuses, and streetscapes.

CONSTRUCTION
Single-piece die-cast aluminum housing has integral heat sink fins to optimize thermal management through conductive and convective cooling. Modular design allows for ease of maintenance and future light engine upgrades. The LED drivers are mounted in direct contact with the casting to promote low operating temperature and long life. Housing is completely sealed against moisture and environmental contaminants (IP65). Low EPA (1.01 ft^2) for optimized pole wind loading.

FINISH
Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a minimum 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling. Available in both textured and non-textured finishes.

OPTICS
Precision-molded proprietary acrylic lenses are engineered for superior area lighting distribution, uniformity, and pole spacing. Light engines are available in standard 3000 K, 4000 K and 5000 K (70 CRI) configurations. The D-Series Size 1 has zero uplight and qualifies as a Nighttime Friendly™ product, meaning it is consistent with the LEED® and Green Globes™ criteria for eliminating wasteful uplight.

ELECTRICAL
Light engine configurations consist of high-efficacy LEDs mounted to metal-core circuit boards to maximize heat dissipation and promote long life (up to L85/100,000 hours at 25°C). Class 1 electronic drivers are designed to have a power factor >90%, THD <20%, and an expected life of 100,000 hours with <1% failure rate. Easily serviceable 10kV surge protection device meets a minimum Category C Low operation (per ANSI/IEEE C62.41.2).

STANDARD CONTROLS
The DSX1 LED area luminaire has a number of control options. Dusk to dawn controls can be utilized via optional NEMA twist-lock photocell receptacles. Integrated motion sensors with on-board photocells feature field-adjustable programing and are suitable for mounting heights up to 30 feet.

nLIGHT AIR CONTROLS
The DSX1 LED area luminaire is also available with nLight® AIR for the ultimate in wireless control. This powerful controls platform provides out-of-the-box basic motion sensing and photocontrol functionality and is suitable for mounting heights up to 40 feet. Once commissioned using a smartphone and the easy-to-use CLAIRITY app, nLight AIR equipped luminaries can be grouped, resulting in motion sensor and photocell group response without the need for additional equipment. Scheduled dimming with motion sensor over-ride can be achieved when used with the nLight Eclypse. Additional information about nLight Air can be found here.

INSTALLATION
Included mounting block and integral arm facilitate quick and easy installation. Stainless steel bolts fasten the mounting block securely to poles and walls, enabling the D-Series Size 1 to withstand up to a 3.0 G vibration load rating per ANSI C136.31. The D-Series Size 1 utilizes the AERIS™ series pole drilling pattern (template #8). NEMA photocontrol receptacle are also available.

LISTINGS
UL Listed for wet locations. Light engines are IP66 rated; luminaire is IP65 rated. Rated for -40ºC minimum ambient. U.S. Patent No. D672,492 S. International patent pending.

DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product.
Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

International Dark-Sky Association (IDA) Fixture Seal of Approval (FSA) is available for all products on this page utilizing 3000K color temperature only.

WARRANTY
5-year limited warranty. Complete warranty terms located at:
www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx

Note: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

S2 Fixture

H. Sandy Health Clinic - Exterior Light Fixture Cut-Sheets

BEGA

Type:

Project:

Modified:

Application
LED bollard with shielded 180° light distribution. This luminaire is designed to provide one sided illumination of ground surfaces. Provided with mounting system that allows the luminaire to be adjusted independent of anchor bolt orientation.

Materials
Luminaire housing and base constructed of die-cast and extruded marine grade, copper free (≤ 0.3% copper content) A360.0 aluminum alloy
Borosilicate glass lens
Reflector made of pure anodized aluminum
High temperature silicone gasket
Mechanically captive stainless steel fastener

NRTL listed to North American Standards, suitable for wet locations
Protection class IP 65
Weight: 9.7 lbs

Electrical

Operating voltage	120-277V AC
Minimum start temperature	-20° C
LED module wattage	7.2 W
System wattage	10.0 W
Controllability	0-10V dimmable
Color rendering index	Ra > 80
Luminaire lumens	411 lumens (3000K)
Lifetime at Ta = 15° C	77,000 h (L70)
Lifetime at Ta = 55° C	53,000 h (L70)

LED color temperature

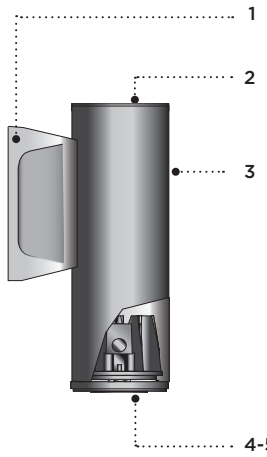
LUMINIS®

SY300 SERIES
SYRIOS - LED
3" WALL UP OR DOWN LIGHT

TYPE: _____ QUANTITY: _____ PROJECT: _____

CATALOG NUMBER:								
	FIXTURE	SUFFIX	REFLECTOR	VOLTAGE	FINISH	OPTION	OPTION	OPTION

ADA Compliant



1- Cast aluminum driver housing, includes galvanized steel wall mount pressure plate.
2- Cast aluminum top cover.
3- Extruded aluminum cylindrical housing.
4- Fully sealed cast aluminum light assembly.
5- Sealed cast aluminum lens frame.
6- Clear tempered glass lens.
7- Faceted specular aluminum reflector.

All stainless steel hardware.

MATERIALS
Syrios LED is made of corrosion resistant 356 aluminum alloy with a copper (CU) content of less than 0.1%.
The main housing is made of seamless extruded aluminum, with an integrally sealed LED light module designed for optimal heat dissipation, and lighting performance.
Syrios LED SY300 series is standard with 29º optic. See options section for alternate selection.

ELECTRICAL
DRIVER Standard driver is 0-10V dimming-ready (dims to 10%) with: 120-277 multi-volt compatibility (50-60Hz), operating temperature range of -30ºC/-22ºF to 55ºC/131ºF, output over voltage protection, output over current protection and output short circuit protection with auto-recovery.

LED Standard 4000K /80CRI. Optional 2700K, 3000K & 3500K. Optional Amber LED for turtle sensitive areas. Wavelengths: 584.5nm to 597nm.

LIFE
60,000hrs $L_{70}B_{50}$ (based on IESNA TM-21 Test Method and LM-80 data).
Up to 95,000hrs $L_{70}B_{50}$ (calculated projection from LM-80 data).

FINISH
Five-stage preparation process including preheating of cast aluminum parts for air extraction, and an environmentally friendly alloy sealant. Polyester powder coating is applied through an electrostatic process and oven cured for long term finish.

MOUNTING
Maximum weight: 2.5lbs (1.1kg)
The mounting plate is designed to fit on a 2X4" (51x102) rectangular electrical box using 3.156" (80) C/C mounting holes.
Optional trimming plate for octagonal jbox (option MT4).

CERTIFICATION
Tested to UL1598 and CSA 22.2 #250. ETL listed wet location.
Rated IP66. CE Certification on request.

- ☐ NBKT Black

OPTIONS

ELECTRICAL

- ☐ **FS** Fuse
- ☐ **REML2-50** 7W remote emergency battery backup for LED, 90 min. Remote mount 50ft - 12" (305) square enclosure with access cover[1]

MOUNTING

- ☐ **SWK** Adaptor box for surface 3/4" conduit feed
- ☐ **MT4** Trimming plate for octagonal box

ACCESSORIES

- ☐ **SL** Solite lens
- ☐ **LSL** Linear spread lens
- ☐ **SNT** 1.5" (38) snoot[2]
- ☐ **HL** Hexcell louver

LIGHT & OPTICS

Alternate CCT ºK LED (LCF: Lumen conversion factor)

- ☐ **K27** 2700K CCT 80 CRI (LCF: 0.91)[3] IDA - Dark Sky Approved
- ☐ **K3** 3000K CCT 80 CRI (LCF: 0.94) IDA - Dark Sky Approved
- ☐ **K35** 3500K CCT 80 CRI (LCF: 0.983)[3]

NOTE: Other CCT & higher CRI available, please consult factory.

NOTES

1- The remote enclosure must be interior.
2- To prevent reflections, interior painted black when a light color finish is selected (ex. WHT, MST, GRT and CHT).
3- Please consult factory when selecting K27 or K35 in conjuction with R9 (very narrow optics).

A+ CAPABLE

FEATURES

OPTICAL SYSTEM
- Self-flanged semi-specular, matte-diffuse or finishing trim
- Patented Bounding Ray™ optical design (U.S. Patent No. 5,800,050)
- 45° cutoff to source and source image
- Top-down flash characteristic
- Polycarbonate lens integral to light engine

MECHANICAL SYSTEM
- Heavy-gauge aluminum construction
- Ceiling mount and wall mount for direct installation to 4" octagonal or square junction box
- Pendant mount entry for 3/8" National Pipe Thread stem; wires supplied by others
- Unique mounting mechanism at top of cylinders for easy one-person installation
- EDXB driver includes 3-foot DMX signal cable when ordered with FCM or WM mounting option. Fixture includes 10-foot DMX signal cable when ordered with PM or ACC mounting option.
- ACC180 provided with 15' 5-wire cord for power and 0-10V dimming

ELECTRICAL SYSTEM
- Fully serviceable and upgradeable LED light engine
- 70% lumen maintenance at 60,000 hours
- Tested according LM-79 and LM-80 standards
- 2.5 SDCM; 85 CRI typical, 90+ CRI optional
- Overload and short circuit protected
- Dimming wires supplied by others

LISTINGS
- Fixtures are CSA certified to meet US and Canadian standards; wet location, covered ceiling. ENERGY STAR® certified product.

WARRANTY
- 5-year limited warranty. Complete warranty terms located at: www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx

Note: Actual performance may differ as a result of end user environment and application. All values are design or typical values, measured under laboratory conditions at 25° C.

CRS[12]	3/8" stem and canopy with 45° swivel	**SDT 347/120 75VA**[13]	347V Step-down transformer
CYSX[12]	3/8" stem and canopy with 5° "hang straight" swivel. Use this nomenclature when ordering EDXB driver		

NOTES

ORDERING NOTES

1. Not available with finishes.
2. Not available with wallwash trim type.
3. Refer to TECH-240 for compatible dimmers.
4. Not available with nLight® and XPoint options.
5. XPoint® CMRB ships separately.
6. Specify voltage 120V.
7. Access panel (supplied by others) recommended for use with nLight® and XPoint®.
8. White cord with white housings. All others black cord.
9. Specify voltage. For use with generator supply EM power. Will require an emergency hot feed and normal hot feed.
10. Interface remote mounted.
11. Additional architectural colors available; see www.lithonia.com/archcolors.
12. Color and length of stem must be specified (from 6" to 240" in even increments in maximum sections of 48"). Ex.: CYS06 DWHG. Ceiling attachment for interior use. Consult factory for exterior use. Wire not included.
13. Transformer must be field-installed to an accessible remote-mounted junction box.

nPS 80 EZ Dimming/Control Pack (qty 2 required)
nPODM 2P DX Dual On/Off/Dim Push-Button WallPod
nCM ADCX Daylight Sensor with Automatic Dimming Control
nCM PDT 9 Dual Technology Occupancy Sensor

Description: This design provides a dual on/off/dim wall station that enables manual control of the fixtures in Row A and Row B separately. Additionally, a daylight harvesting sensor is provided so the lights in row B can be configured to dim automatically when daylight is available. An occupancy sensor turns off all lights when the space is vacant.

nLight® Control Accessories:
Order as separate catalog number. Visit www.sensorswitch.com/nLight for complete listing of nLight controls.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® control networks when ordered with drivers marked by a shaded background*
- This luminaire is part of an A+ Certified solution for nLight control networks, providing advanced control functionality at the luminaire level, when selection includes driver and control options marked by a shaded background*

To learn more about A+, visit www.acuitybrands.com/aplus.

TARGETTI

BULLETTO

Compact Adjustable Flood Light Projector

Concept: Compact projector flood light for high intensity applications.
Materials: Aluminum body and joints for maximum heat dissapation powder coated in Ferrite Grey or Bronze finish. Modular body for toolless maintenance. Lens cover assymbly for simple toolless field interchangability of accessories.
Optics: NSP, SP, FL, MW, and WF use high efficiency LED Chip on Board. Equipped with collimating optic with angle specific holigraphic spread lens filters.
Mounting: Adjustable up to 180° on the vertical plane with aim locking set screw. Brass strain release gland with ½" NPT thread nipple that can be screwed directly to recieving mounting.
Installation: Pre-cabled with 10' Belden direct burial 18ga 3 Conductor Cable for Connection to remote power supply.
Finish: Ferrite Grey / Bronze
Power Supply: Remote Class 2, 120V-277VAC power supply required, see page 2 for options.
Wattage: 10W (NSP) / 12W (SP/FL/MF/WF)
Color Temperature: 2700°K / 3000°K / 3500°K / 4000°K

Tree Mounting Accessories

TREE STRAP (REQUIRED) - CHOOSE 1	
Durable 1.5 inch wide Nylon webbing Strap is flexible with High Strength Aircraft Aluminum V-ring Buckle in Gunmetal finish and lock in loop to prevent slipping. The strap is made to coordinate with up to 6 fixtures and 1 wiring connection box.	
TTS0101	Tree strap for trees 39" in circumference or smaller. Olive Green nylon strap with Gunmetal cinch buckle.
TTS0102	Tree strap for trees 39" in circumference or smaller. Coyote Brown nylon strap with Gunmetal cinch buckle.
TTS0103	Tree strap for trees 39" in circumference or smaller. Graphite Grey nylon strap with Gunmetal cinch buckle.

Shown with Tree Strap and Fixture Bracket

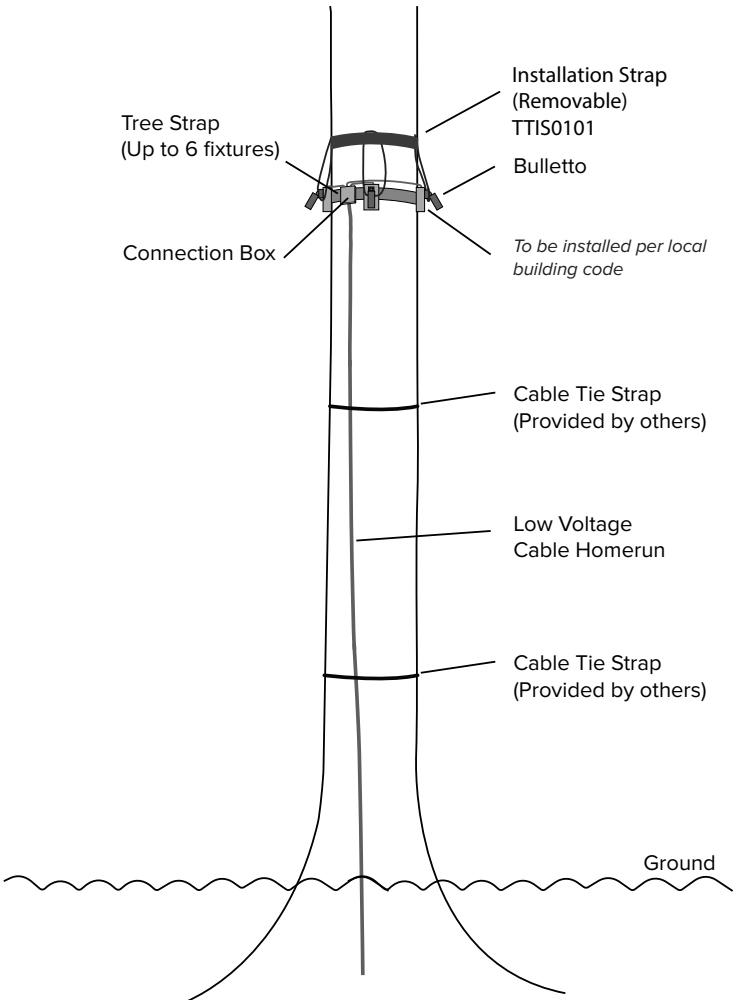
INSTALLATION STRAP (OPTIONAL)	
Durable 1.5 inch wide Nylon webbing Strap is flexible with Metal Cinch Buckle and lock in loop to prevent slipping. The installation strap comes with 4 each 12 inch Rubber Loops used to hold up to 6 fixtures in place while positioning and tightening the Tree Strap in position during Installation or Maintenance and then removed for operation. ***For use with 2 or more fixtures.***	
TTIS0101	Installation strap flexible nylon webbing strap with metal cinch buckle and lock in loop. Includes 4 each 150mm rubber loops to hold up to 6 fixtures in place while positioning.

FIXTURE BRACKETS (REQUIRED) - CHOOSE 1		
Buckle style Brackets for securing onto Tree Straps.		
●	●	*Description*
TTBLT0101	**TTBLT0102**	Bracket with stainless steel mounting screws.

TREE STRAP CONNECTION BOX (OPTIONAL)	
Tree strap connection boxes are used to connect all multiple low voltage cables for one continuous cable connection down the tree, additional cable provided by others.	
TTCB0103	Tree Strap Connection Box. Grey ABS plastic with internal terminal block for wire connections and 3 each ½" knockouts for connections to 1 or 4 fixtures. Dimensions: 3¼" x 2½" x 1¾".
TTCB0104	Tree Strap Connection Box. Grey ABS plastic with internal terminal block for wire connections and 4 each ½" knockouts for connections to 5 or 6 fixtures. Dimensions: 4½" x 2½" x 1¾".

MESH WIRE PROTECTION COVER (OPTIONAL)	
A braided polyethylene terepthalate (PET) monofilament yarn resistant to chemical degradation, UV radiation, and abrasion.	
TTSJS01	Carbon Grey 3/8" SJO Cord Sleeve (Sold per foot)
TTSJS02	Brown 3/8" SJO Cord Sleeve (Sold per foot)
TTSJS03	Forest Green 3/8" SJO Cord Sleeve (Sold per foot)

Wiring Configuration



Adjust the strap every 6 months in order to prevent tree damage.

ARCHITECTURAL WALL PANELS | AWP3030 | JULY 2019

Vertical Installation Guide

AWP-3030
VERTICAL INSTALLATION GUIDE

TABLE OF CONTENTS

GENERAL

This guide is intended to provide the key information needed to successfully install Nichiha's 3030mm Architectural Wall Panels (AWP3030) in a vertical application. Further installation information and technical resources such as animated instructional videos, Technical Bulletins, three-part specifications, product testing and certifications, architectural details in AutoCAD, Revit, and PDF versions, and other technical documents are available on our website: nichiha.com/resource-center.

Install products in accordance with the latest installation guidelines and all applicable building codes and other laws, rules, regulations, and ordinances. Review all installation instructions and other applicable product documents before installation. **This install guide's effective date is July 2019.**

PRODUCT INSPECTION

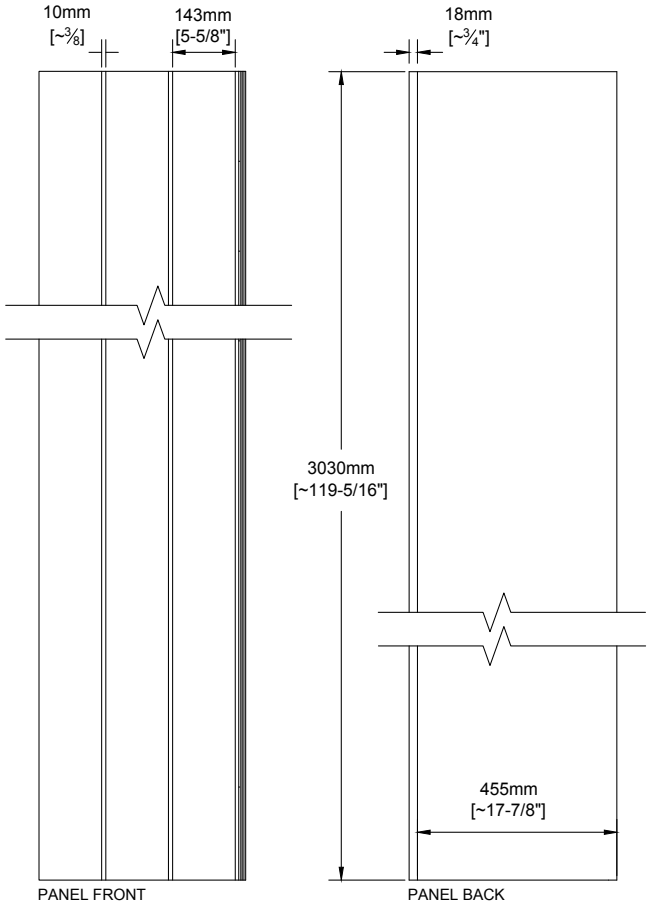
Inspect all products thoroughly prior to installation. Do not install any product which may have been damaged in shipment or appears to have a damaged or irregular finish. Should you have a question or problem with your order, contact your local dealer or Nichiha Customer Service, toll-free, at 1.866.424.4421. **Keep the products dry prior to installation. It is best to store the products indoors, otherwise keep them covered.** Do not stack pallets more than two high.

BASICS OF THE AWP3030 SYSTEM

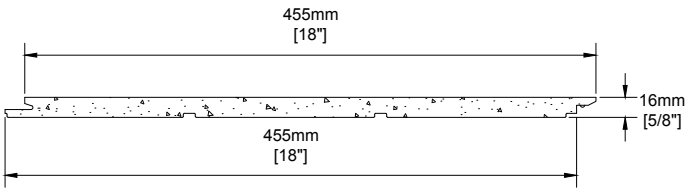
Nichiha AWP3030 dimensions are 455mm (h) x 3,030mm (l) x 16mm (t). It is important to keep in mind the actual metric dimensions when considering panel layout, placement of control and compression joints, and with respect to sizing window and door openings. Approximate Imperial dimensions are 17-7/8" (h) x 119-5/16" (l) x 5/8" (t).

AWP3030 panel edges are shiplapped on the long edges and a factory sealant gasket is included on one edge, providing a factory seal on all vertical joints. AWP attachment hardware engages the long edges, holding the panels off the substrate surface by 10mm (~3/8") and creating a closed-joint, drained/back-ventilated rainscreen system with concealed fastening. When accounting for the overall thickness of the AWP system, add this 10mm plus the thickness of the panel (16mm) for total system thickness of 26mm.

AWP3030 may be installed horizontally or vertically. See also *Horizontal Installation Guide AWP1818, AWP3030.*



VINTAGE WOOD PANEL DETAIL
SCALE: 1" = 1'-0"



PANEL SECTION

LIMITATIONS AND TECHNICAL DESIGN REVIEWS

Natural limitations on product usage are inherent to any cladding product's design, physical characteristics, and attachment system. Nichiha AWP are intended as a low-to-mid-rise cladding product.

Any project of more than three stories or 45 feet, as well as those located in high wind coastal areas (Exposure Categories C and D with Basic Wind Speed in excess of 130 mph), or those with any wall assembly not described in *Framing & Sheathing Requirements*, require a technical review by Nichiha to evaluate feasibility via our Technical Design Review process.

By evaluating a project's unique criteria and design, we can reference independently test-derived and calculated wind load performance data for our products to determine whether and how the panels can safely be installed on the project. Contact your local rep or Nichiha technical department for details or to initiate a Technical Design Review.

AWP are not to be used in any applications/uses not specified or described in this installation guide or other Nichiha technical documents. Any such use shall not be backed by the manufacturer's product warranty.

Do not use AWP on open screen walls.

Insulated Concrete Forms (ICFs) require additional measures.

Installation of AWP products on modular structures that are factory-constructed and then transported to a final site are not approved; and further, excluded from the Limited Product Warranty, per Section 2.F.

AWP installed as soffit is **not** covered by the Nichiha Product Warranty or the Nichiha Finish Warranty. Refer to pages 38-41 of the *AWP Horizontal Installation Guide*.

Please contact Nichiha Technical Services for assistance.

SAFETY

As with any natural stone, masonry, or concrete based product, when cutting, drilling, sawing, sanding, or abrading fiber cement cladding, proper safety measures must be taken due to the potential for airborne silica dust, an OSHA-identified hazardous substance that can pose serious medical risks.

Always wear safety glasses and a NIOSH/OSHA approved respirator with a rating of N, O, or P 100. Carefully follow the respirator manufacturer's instructions as well as applicable governmental safety regulations concerning silica. Refer to Nichiha's SDS for more information.

Always cut fiber cement panels outside and with a dust-collecting HEPA system. Do not cut the products in an enclosed area.

Use a dust-reducing circular saw with diamond-tipped or carbide-tipped fiber cement saw blades.

Always clean panels after cutting. Fiber cement dust can bind to the panel finish. Vacuum dust with a HEPA-filtered vacuum.

FRAMING AND SHEATHING REQUIREMENTS

Prior to Nichiha installation, closely inspect exterior wall substrate and correct any problems. Walls that are out of plumb, for example, can negatively impact the installation quality of AWP. Nichiha Spacer may be used in conjunction with panel attachment hardware if necessary to ensure a smooth, even substrate.

With conventional stud spacing, 7/16" or thicker APA rated OSB or Plywood sheathing ***must*** be used as the fastening base for Vertical AWP3030 as the panel size module will not align with framing. **If nail-base insulation sheathing is considered, please contact Nichiha Technical as additional measures may be required**. Alternatively, studs or furring may be spaced at 45.5cm (17-7/8") o.c. to allow fastening of AWP hardware directly to framing.

Refer to our third party building code certification(s) and/or state/local approvals for allowable wind design pressures at nichiha.com/resource-center.

Nichiha AWP cladding may be installed on vertical walls only. No tilted/sloped walls, nor true radius/ curved walls. Vertical AWP installations are not compatible with PEMBs. AWP may be installed on wood or steel framing, concrete/masonry with furring, and Structural Insulating Panels (SIP) meeting the following requirements:

WOOD STUDS

Structural Sheathing Method
Size: minimum 2"x4" studs
Spacing: 16" o.c. max
Sheathing: APA rated exterior grade minimum 7/16" plywood/OSB required

Custom Stud/Furring Spacing Method
Size: minimum 2"x4" studs
Spacing: 45.5cm (17-7/8") o.c.
Sheathing: APA rated exterior grade minimum 7/16" plywood/OSB, 1/2" or 5/8" gypsum

METAL STUDS

Structural Sheathing Method
Gauge: minimum 18
Spacing: 16" o.c. max
Sheathing: APA rated exterior grade minimum 7/16" plywood/OSB required

Custom Stud/Furring Spacing Method
Gauge: minimum 18
Spacing: 45.5cm (17-7/8") o.c.
Sheathing: APA rated exterior grade minimum 7/16" plywood/OSB, 1/2" or 5/8" gypsum

CONCRETE/MASONRY

Furring is required for installation of AWP over concrete and masonry structures.

Wood Furring: pressure treated lumber 2"x4", oriented vertically, spaced 45.5cm (17-7/8") o.c. max with additional vertical furring segments at Vertical Starter Track locations to enable 9" o.c. fastener spacing for track.

Metal Furring: hat channel, c-stud, or z-furring, minimum 18 gauge with 1"- 2" flanges, oriented vertically, spaced 45.5cm (17-7/8") o.c. max. with additional vertical furring segments at Vertical Starter Track locations to enable 9" o.c. fastener spacing for track.

Sheathing: exterior grade minimum 7/16" plywood/ OSB required with furring spacing other than 45.5cm (17-7/8") o.c.

STRUCTURAL INSULATING PANELS (SIP)

SIPs should be installed in accordance with manufacturer's instructions and local building codes. Additional special Nichiha installation requirements for SIPs are discussed in the Fasteners and Installing the First Course sections to follow.

For buildings greater than one story, contact Technical Department for assistance.

CONTINUOUS INSULATION

When exterior/continuous insulation is to be used with AWP3030 in vertical applications, please contact Nichiha *Technical Services* for assistance. Framing/sheathing/furring alternatives will be necessary.

Also refer to the Technical Bulletin: *Continuous Insulation and AWP* available at Nichiha.com/resource-center.

VERTICAL AWP3030 OVER C.I. ATTACHMENT REQUIREMENTS

When adding a furring grid* to enable AWP installation over c.i., the following general criteria are applicable:

Special attention must be paid to supporting the Vertical Starter Track, which bears the weight of AWP3030 in vertical applications. The clips do not share the dead loads for vertical panels.

1. Shaped metal furrings (Z, hat channel, C, etc.)

- Minimum 18 gauge
- Aligned vertically
- Spaced 16" o.c. (max)
- Min. 7/16" APA Rated OSB or Plywood

- or -

2. Pressure treated lumber

- Minimum 2x (1.5") thickness
- Aligned vertically
- Spaced 16" o.c. (max.)
- Min. 7/16" APA Rated OSB or Plywood

- or -

3. Shaped metal furrings (one layer)

- Minimum 18 gauge
- Aligned vertically at 17-7/8" o.c.
- Additional vertical furring segments at Vertical Starter Track locations to enable 9" o.c. fastener spacing for track

- or -

4. Shaped metal furrings (two layers)
   (Z, hat channel, C, etc.)
   - Layer One
     - Minimum 18 gauge
     - Aligned horizontally
     - Spaced per engineer's design
   - Layer Two
     - Minimum 18 gauge
     - Aligned vertically at 17-7/8" o.c.
     - Additional vertical furring segments at Vertical Starter Track locations to enable 9" o.c. fastener spacing for track.

- or -

5. CL-TALON® 300

- Base Track and Wall Mount T-Tracks (vertical) at 16" o.c. (aligned with framing), and Therme Clips spaced per project loading requirements

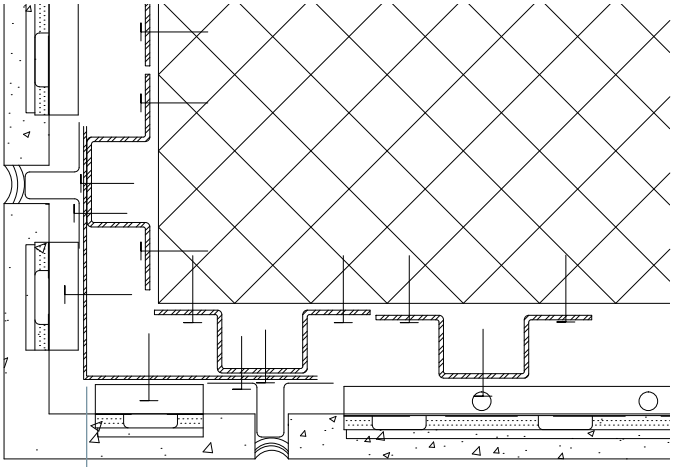
- Wall Mount Supports (horizontal) at 16" o.c.

**Consult a structural engineer to design the furring system to manage the AWP system dead load of minimum 4 psf and also meet the project wind load design criteria. Furring must account for expected building compression. Nichiha does not provide fastener design for anchoring the furring to structure. Refer to IBC 2015 Table 2603.12.2 for more info.*

ACCESSORY ATTACHMENTS

Nichiha Double and Single Flange Sealant Backers and metal trims, such as H-Mold and Corner Key, must be fastened to furring, blocking, or 18 gauge flat stock. Sealant backers must be fastened every 12”-14” vertically, so any use of flat stock must accommodate this fastening schedule.

Outside corners may be wrapped with 18 gauge flat stock fabricated to fit the corner. Attach the stock to furring on both sides of the corner. Corner Clips are used to secure Nichiha factory panel Corners and may be fastened to the flat stock wrapping, as can metal trim corners.



18 ga flat stock wrapping corner

IBC 2015 TABLE 2603.12.2

The model building code for 2015 includes information in Chapter 26 about foam plastic insulation/sheathing and furring minimum fastening requirements. Table 2603.12.2 shows various configurations depending upon framing gauge and spacing, fastener size and spacing, thickness of insulation and cladding weight. As an example, according to the table, 3 inches is the maximum thickness of foam sheathing on which a furring can be added directly on top, spaced at 16” o.c. and fastened with #8 screws every 12”-16” (into 18 gauge wall framing), that can support a cladding weight of 3 psf.

ENERGY CODE FRIENDLY MARKET OPTIONS

A number of engineered third party systems exist that are designed to solve the conflicts between energy code compliance and the safe installation of exterior claddings over continuous insulation.

Nichiha has direct experience with these products:

- Bracket and rail systems:
  - Cascadia Clips®
  - FERO Cladding Support
  - ISO Clip
  - Knight Wall MFI®
- CL-TALON®
- Knight Wall CI® and HCI™ Systems
- SMARTci GreenGirts

WEATHER RESISTIVE BARRIERS

A weather resistive barrier (WRB) is required when installing Nichiha panels over stud walls and SIPs. For CMU/concrete assemblies, Nichiha defers to local code requirements. Use an approved WRB as defined by the 2015 IBC. Refer to local building codes.

A permeable WRB is highly recommended when installing Nichiha panels for residential applications.

Permeable WRB is required for all commercial applications. A fluid applied WRB is acceptable.

Sheathings and insulations with an integrated code-compliant WRB such as ZIP System® and DensElement™ are acceptable.

All openings must have appropriate flashing to prevent moisture penetration. Follow manufacturer's guidelines and all local building codes.

STORAGE & HANDLING

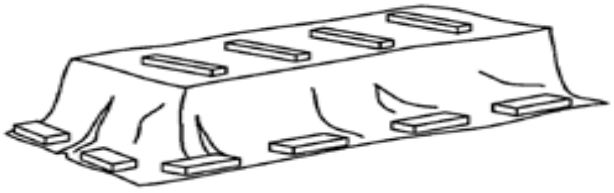
AWP are a finished product and care must be taken to protect them against damage prior to and during installation. Panels must be stored flat and kept dry. Indoor storage is best. Refer to the storage information included on product pallets.

Ensure panels are completely dry before installing. Direct contact between the panels and the ground must be avoided at all times. It is necessary to keep panels clean during the installation process.

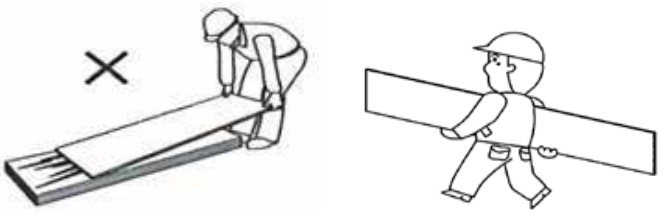
Cut panels face down.

Always clean panels with a clean, soft, dry cloth after cutting. Dust can bind to the finish.

When sidewalks are poured after awp installation, take steps to cover/protect panels near grade. Cement dried on AWP cannot be removed.



Always cover pallets with a tarp or store indoors!



Don't unpackage and re-stack panels!
Always carry panels on edge!

FASTENERS

All Applications

Fasteners must be **corrosion resistant**. Stainless steel or corrosion resistant screws such as hot-dipped zinc or ceramic coated are recommended. Comply with all local building codes for fastener requirements.

Number 10, pan-head screws (HD .365") were used as clip fasteners for AWP wind load testing. The minimum size for clip fasteners is #8. Ultimate Clip and Starter Track screws must have a pan, wafer, or hex type full head.

Min. Number 7 finish screws with a bugle or flat head (min. head diameter 0.255") are appropriate for face fastening locations. These must penetrate framing per the minimum requirements below. Refer to the ***Face Fastening Best Practices*** section for face fastening procedure.

When installing AWP with the Structural Sheathing Method, ensure clip fasteners are at least 1" in length to fully penetrate the plywood or OSB. Wherever possible when face fasteners are needed, screws must be long enough to penetrate all the way through the sheathing and into the framing.

For the Custom Stud Spacing Method, the fasteners must always penetrate the studs or furring with minimum 1" penetration for wood or 1/2" for metal.

FACE FASTENING BEST PRACTICES

To minimize the appearance of face fasteners, utilize the following steps:

1. Apply low adhesive tape such as painters tape to the panel at face fastening locations.
2. Pre-drill panels 1" from the cut edge to be face fastened. Use a countersink drill bit with chamfer matching the head diameter of the bugle-head type screws to be used for face fastening.
3. Fill counter-sunk fastener holes with exterior cementitious filler, such as MH Ready Patch® and later dab touch-up paint with cotton swabs or artist brush.
4. Remove the painter's tape only after applying patch and touch up paint.

INSTALLATION HARDWARE & ACCESSORIES

ULTIMATE VERTICAL STARTER TRACK

Ultimate Vertical Starter Track serves as the foundational support for the AWP system while also providing faster and greater ease of installation. *With Vertical AWP3030, the Starter Track carries the entirety of the dead loads and is required for each course.*

FA 710 T Vertical Starter Track – 10mm rainscreen

ULTIMATE CLIP II

Ultimate Clips are secured to the vertical panels' shiplaps, securing AWP to the wall while holding their back surface off the substrate to create the 10mm (3/8") rainscreen space. *In vertical applications, clips do not support panel weight.*

JEL 778 CLIP Compatible with all 3030mm AWP - 10mm rainscreen

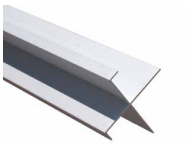
Joint Tab Attachments included with Ultimate Clips are not needed for vertical panel installations.

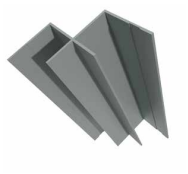
CORRUGATED SPACER

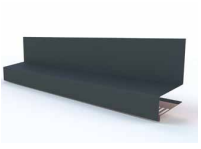
At termination points where Ultimate Clips cannot be used, Nichiha Corrugated Spacer is required to maintain the rainscreen space and prevent panel deflection at face fastening locations such as window jambs and outside corners.

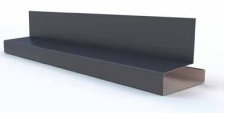
FS 1005 SPACER – 5mm rainscreen

FS 1010 SPACER - 10mm rainscreen









SEALANT BACKERS

Nichiha Sealant Backers provide exact spacing for expansion and termination joints and the recommended depth of sealant (75-80%).

They provide faster installation than a foam backer rod and require less sealant. At sealant joints, use a sealant that complies with ASTM C920, Class 35 (min.). Refer to the Sealant section on page 19 for more information.

Single Flange Sealant Backer: FHK 1015 – 10mm rainscreen
Double Flange Sealant Backer: FH 1015 – 10mm rainscreen

METAL TRIM OPTIONS

Nichiha metal trim provides aesthetically pleasing design options for corners, openings, and transitions.

TRIM	APPLICATIONS
Corner Key	Outside Corners
H-Mold	Vertical Joints
Open Outside Corner	Outside Corners
J-Mold	Terminations
Inside Corner	Inside Corners

ESSENTIAL FLASHING SYSTEM	APPLICATIONS
Starter*	Base/Clearance Concealment
Compression Joint	Horizontal/Compression Joints
Overhang*	Fascia-to-Soffit Transitions

* Inside and outside corner segments are available.

PLANNING AND PANEL LAYOUT

To ensure a successful installation, it is important to first plan how the panels will be laid out, where horizontal/compression joints will be located for each course, and line of sight regarding inside corners decided.

Reminder: AWP3030 actual dimensions are metric: 455mm (h) x 3,030mm (l). Imperial equivalents: 17-7/8" (h) x 119-5/16" (l).

Horizontal/Compression Joints (Page 25)***:*** 1/2" (min.) Horizontal, flashed break detail to allow for building compression at floor lines. ***Horizontal joints may not be staggered.***

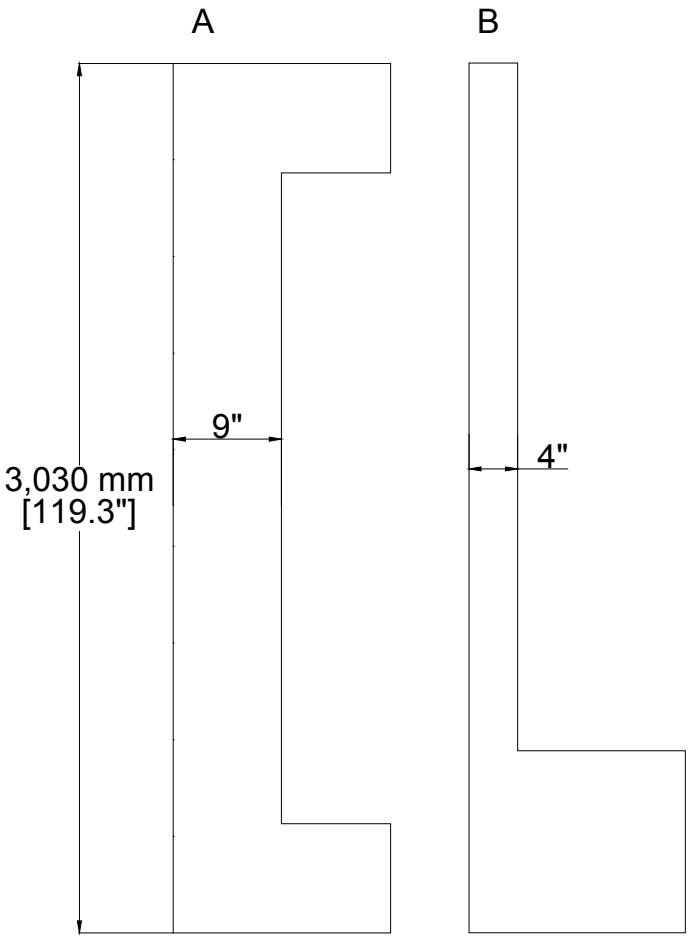
Inside Corner Line of Sight (Page 20)***:*** Sealant joints at inside corners can be placed out of view from the primary line of sight of a wall. Place the sealant joint on the less-viewed corner wall. Alternatively, utilize Inside Corner metal trim.

Cut Panels: In general, it is best to avoid cutting AWP to short or narrow strips and segments of less than 9". The hard minimum width or height is 4". Adjust the layout or use alternate materials when needed to avoid cutting AWP smaller than 4".

Specifically, when an individual panel is taller than a window or other opening and is used over the head or under the sill, do not cut it to less than 9" in width along the opening jamb. (see image A)

When an opening is taller than an individual panel and two or more are needed to cap over the header or cup the sill, do not cut the panel to less than 4" in width along the jamb. (see image B)

Design Wind Pressures: Refer to our code approval documents when determining the best vertical panel installation method for a specific project. The Structural Sheathing Method and Custom Stud Spacing methods result in different allowable design pressures, dependent upon thickness of wood sheathing or type/gauge of custom spaced studs/furring. Refer also to *Limitations, Technical Reviews* section regarding Nichiha's technical review process.



AWP3030 - VERTICAL: INSTALLING THE FA 710 T VERTICAL STARTER TRACK

All Applications

Without custom stud/furring spacing outlined in the Framing & Sheathing Requirements section, 7/16" or thicker APA rated OSB or plywood sheathing MUST be used to enable vertical installation of AWP3030. Plywood/OSB shall be secured to building framing in compliance with best practices and local building codes. *In any case, Vertical Starter Track must be secured to framing and never sheathing alone as it fully carries the weight of the vertical panels. With respect to nail-base insulation sheathings, please contact Nichiha Technical Services for guidance.*

Starter Track must remain continuous. Staggering of horizontal joints is not permitted.

MINIMUM CLEARANCES

The Starter must be level and attached at a minimum of 6" above finished soil grade or per local building codes (use a laser level to verify). When installing over a hard surface such as driveways or sidewalks, a 2" clearance is acceptable.

Keep AWP at least 1" above roofs.

Essential Starter Flashing may be installed prior to the Starter Track to conceal the clearance gap above hardscape and decking. Beginning with outside and inside corner segments, fasten trim at each stud location or every 10" o.c. to sill plate. Fasten inside and outside corner segments to framing on both sides of the trim, keeping at least 1" from trim vertical edges. Main segments will slide into/overlap the corner trim. Position Starter Track to leave 1/4" clearance between the panel edge and trim/flashing.

Vertical Starter Track fastened every 6" to 9" to framing.

ALL APPLICATIONS

To fully secure Vertical Starter Track, use corrosion resistant screws of sufficient length to ensure full penetration of the sheathing and into framing by 1" for wood or 1/2" for metal. ***Starter must be level.***

WOOD & METAL STUDS

Vertical Starter Track must be secured every 6"-9" into the sill plate or to the studs and, if applicable, halfway between into the wood sheathing.

CONCRETE/MASONRY

When installing over concrete construction, the wall must be furred out with pressure treated lumber, metal hat channel, or z-furring. Install APA rated 7/16" OSB or plywood to furring when the spacing is other than 45.5cm (17-7/8") o.c.. Starter Track must be secured at each furring location and halfway between into the sheathing or blocking at an overall fastener spacing of 6"-9" o.c.

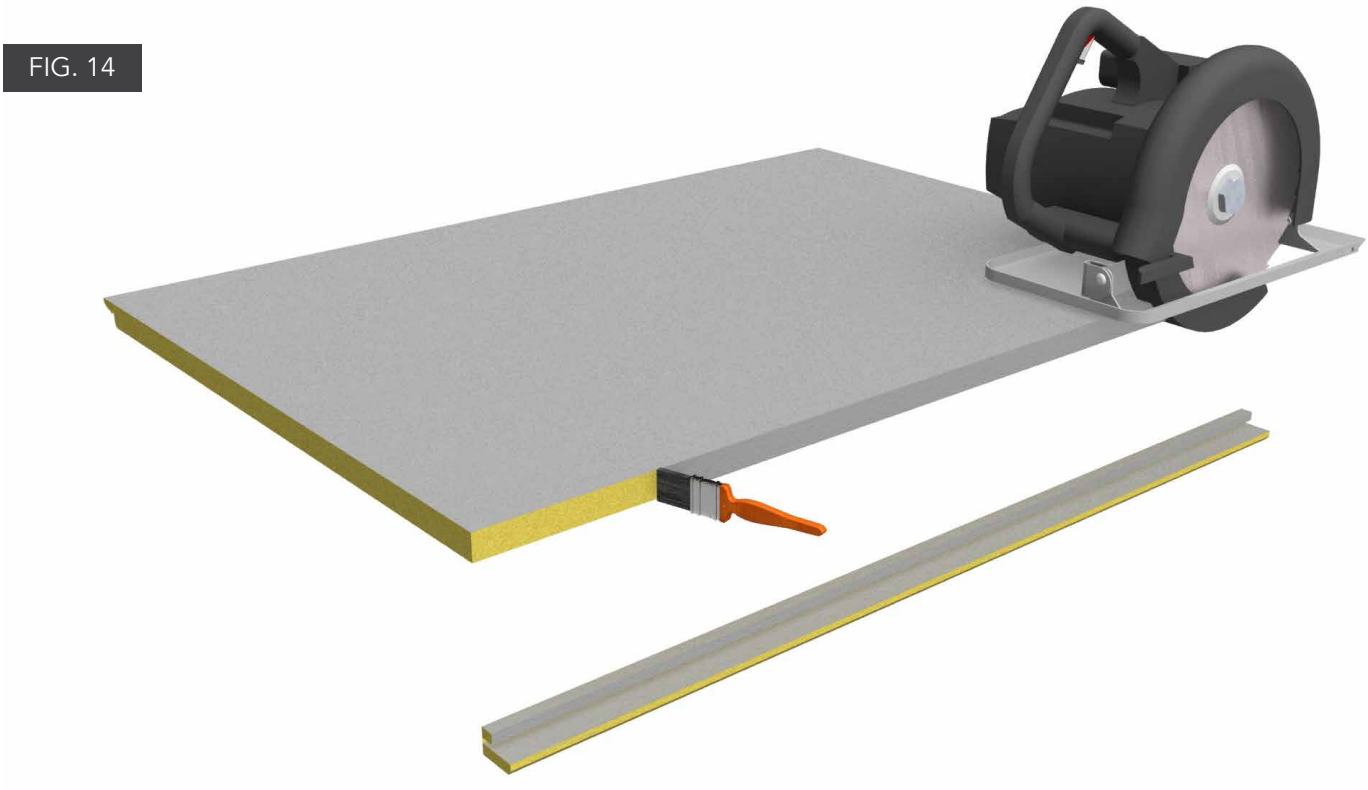
STRUCTURAL INSULATING PANELS (SIP)

Secure Starter Track every 6"-9" o.c. max into the sill/ horizontal base framing of the SIP.

NAIL-BASE INSULATION SHEATHING

Contact Nichiha Technical Services for guidance.

FIG. 14



GENERAL PANEL & ACCESSORY BASICS

PANEL SELECTION

Nichiha AWP are packaged with two panels in a pack, which are placed on pallets consisting of two stacks. Due to alternating patterns of texture and color between individual panels as well as how the panels are manufactured and packaged, it is best to install all panels from each individual stack before taking and installing panels from the second stack on the same pallet. Do not alternate installing from one stack and the second, which may result in undesirable patterns.

SEALING CUT PANEL EDGES

When cutting AWP, it is best to cut with the panel face down, except when cutting brick finish panels as it is easier to follow the simulated mortar lines.

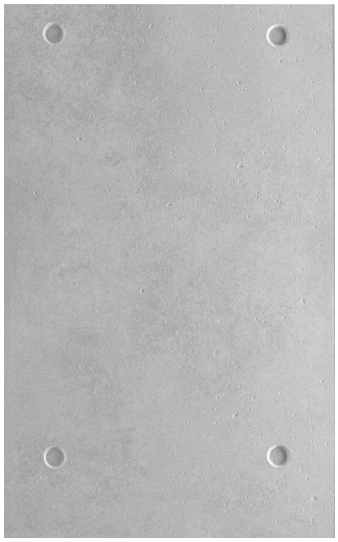
Cut and exposed panel edges must be primed or sealed with fiber cement sealer (e.g. DryLock®) or paint such as Kilz Premium® or Kilz Max®. Do not use supplied Illumination Touch-Up paint. (Fig. 14)

Be sure to clean panels with a dry, soft, clean cloth after cutting to prevent dust from bonding to the finish.

CUTTING ULTIMATE CLIPS

JEL778 Ultimate Clips are 26" long. Where full length clips can be used, they are required. However, there may be conditions where clips must be cut to accommodate panels in smaller areas or segments such as short columns, pilasters, or insets/recesses.

Notches on the upward panel engagement flanges indicate where clips can be cut evenly into thirds. These 1/3 segments can be further reduced evenly into two or four pieces each with weep holes serving as dividing points. The smallest segment must include at least one downward panel engagement flange. Always use the widest clip segment possible. Cut with a non-ferrous saw blade on a band or chop saw.



SEALANT

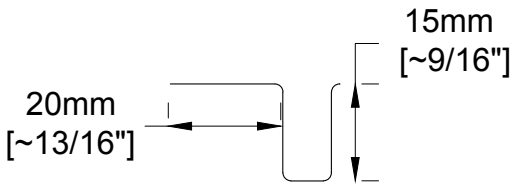
Sealants to be used with AWP must match the following requirements:

- Comply with ASTM C920
- Have a Class of 35, 50, or 100/50 (minimum 35% joint movement)
- Be a polyurethane, polyurethane hybrid, or Adfast Adseal 4580
- Provide two-sided adhesion at joints

OSI® QUAD® may not be used for Nichiha expansion joints:

- It is a class 25 product.
- QUAD® MAX is acceptable since it is a Class 50.

Refer to the Technical Bulletin: *Sealants* available at *nichiha.com/resource-center*.



Single Flange Sealant Backer (FHK1015R) (Galvalume)

SEALANT JOINTS/CAULKING

Fasten Single Flange Sealant Backers at inside corners (one wall at corner), along window and door jambs, and transition points with other cladding. Fasten to framing, blocking or plywood/OSB sheathing at 12”-14” o.c. with the 3/8” bump/ sealant portion butting the corner or jamb.

Sealant complying with ASTM C920, Class 35 (min.) is required where Single and/or Double Flange Sealant Backer is used.

Refer to the sealant manufacturer’s instructions or requirements.

Place low-adhesive tape (masking or painter’s) over the panel along the areas requiring sealant joints for a clean caulk line.

Fill the gap between the panels with a color-matched/coordinating ASTM C920, Class 35 (min.) sealant. The Nichiha Sealant Backer allows for the proper depth of sealant (75-80%).

Before removing tape, press the surface of the sealant with a caulk spatula or similar tool to ensure an even surface.

Remove masking tape before sealant cures.

If excess sealant adheres to panel, remove completely using a putty knife or soft cloth.

AWP3030 - VERTICAL INSTALLATION

Without custom stud/furring spacing outlined in *Framing & Sheathing Requirements* section, 7/16" or thicker APA rated OSB or plywood sheathing MUST be used to enable vertical installation of AWP3030. Wall surfaces must be flat.

Use corrosion resistant screws of sufficient length to ensure full penetration of wood sheathing (Structural Sheathing Method), or the 17-7/8" o.c. studs with the Custom Stud/Furring Spacing Method (minimum penetration 1" into wood, 1/2" into metal), to secure Ultimate Clips. Face fasteners must be at least 1-1/2" in length.

Single Flange Sealant Backer and metal trim should be installed before panels. Refer to ***Inside Corners, Windows & Doors*** and ***Outside Corners*** sections.

AWP installation proceeds by working from left to right.

If starting at an inside corner, predetermine which wall will include the Single Flange Sealant Backer. Consider the location to minimize the visibility of the sealant line. Clad the higher visibility wall without the sealant joint first so that the adjoining wall panels can terminate to it with the Single Flange Sealant Backer detail. Or utilize Inside Corner metal trim.

Prior to installing the first vertical panel, add 10mm corrugated Spacer at the left edge of the wall at the starting point. The Spacer should extend upwards to where the panel will end.

Looking at an AWP3030 oriented horizontally, remove the bottom ship-lapped edge and then rotate the panel 90 degrees clockwise to set the short panel edge on the FA 710T Vertical Starter Track. The freshly cut and sealed edge should butt to the corner/starting point and will cover the 10mm Spacer. Be sure to clean dust from cut panels with a dry, soft cloth or HEPA vacuum.

Pre-drill panels after applying low-adhesive tape to be removed after patching/touch-up. Fasten every 12"-16" o.c., spaced vertically, with a minimum 1" distance from the edge (***Fig. 19a***).

Fill counter-sunk fastener holes with exterior cementitious filler, such as MH Ready Patch® and later dab touch-up paint with cotton swabs. Remove painter's tape.

Whenever possible, use face fastening screws long enough to penetrate all the way through the sheathing and into the framing by 1/2" for metal, 1" into wood. Refer to the ***Touch-up Paint***, ***Minor Repairs*** sections for more info on patching face fasteners.

On the right, factory edge, add four Ultimate Clips evenly spaced along the full AWP3030 panel, with the first at the Starter Track edge. Add four fasteners per clip, evenly spaced (***Fig. 19b***). In the Structural Sheathing Method, the clips will be fastened only to the plywood/osb sheathing. With the Custom Stud Spacing, the clips will align with vertical framing and the fasteners will be secured to the studs or furring (***Fig. 19c***).

Working from left to right, install the next panel with its ship-lapped edges intact. A rubber mallet or block may be used to seat panels firmly in place and tighten together on vertical panel joints. Do not hammer directly on the panels as direct contact may cause cracks, gouges, or chipping. Install four Ultimate Clips as with the first panel, each with four screws. (*Continued p. 20*)

FIG. 19A

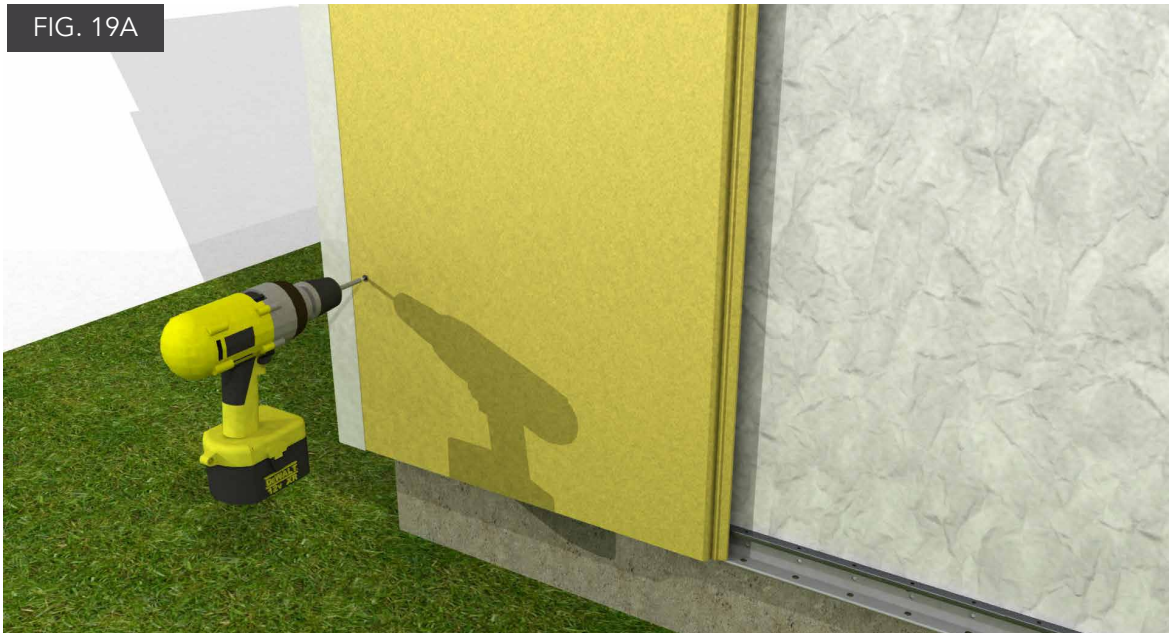


FIG. 19B

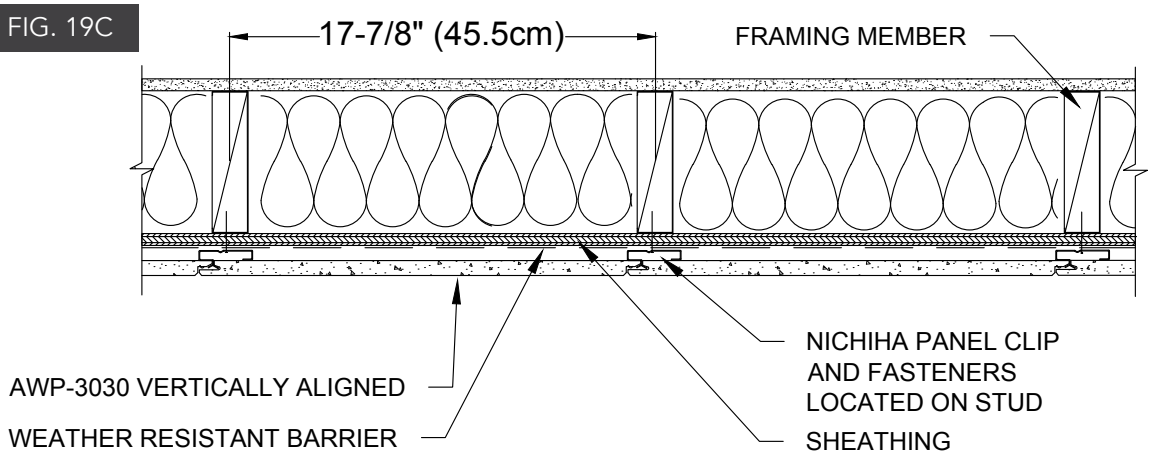
FIG. 19C



Continue likewise until reaching a termination or transition point. The factory edge must be removed from the last panel, and this cut edge must be face fastened over 10mm Spacer. Space the fasteners every 12”-16” o.c. vertically, with a minimum 1” distance from the edge. Again, whenever possible, use face fastening screws long enough to penetrate all the way through the sheathing and into the framing, 1/2” into metal, 1” into wood. Refer to ***Face Fastening Best Practices*** for info on patching face fasteners.

To begin a second course of panels, install appropriate horizontal joint flashing or Essential Compression Joint Flashing above the top edge of the bottom/first course of panels. Then repeat the steps beginning with FA 710 T Vertical Starter Track a minimum 1/2” above the top edge of the first course of panels (See *Horizontal/Compression Joint* section). ***Horizontal joints may not be staggered.***

INSIDE CORNERS, WINDOWS & DOORS

All Applications

Appropriate flashing should be used to prevent moisture penetration on all inside corners, doors, and windows. Refer to local building codes for best practices.

Cut and exposed panel edges must be coated with exterior acrylic latex paint.

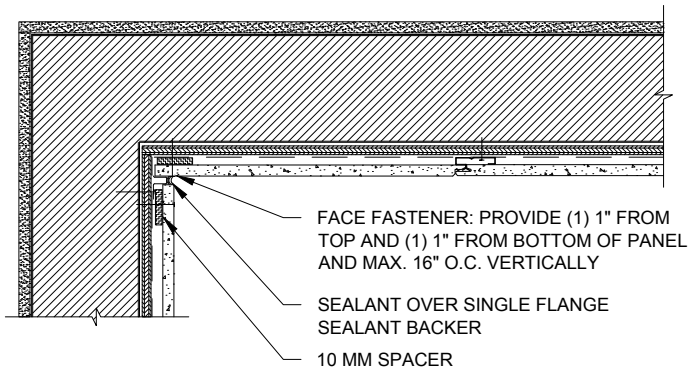
INSIDE CORNERS

Single Flange Sealant Backer (FHK 1015): Decide primary line of sight in order to minimize visibility of the sealant joint.

Install the panel on the front wall (more visible) first. Ensure panel is butted up tight to the inside corner wall. Fasten the Single Flange Sealant Backer onto the side wall right up against the front wall panel’s edge at 12”-14” o.c. to framing, plywood/osb sheathing, or blocking.

Add 10mm Spacer over the fastening flange of the Sealant Backer.

Install side wall panel, with factory edge removed and sealed, directly against the sealant backer, over the Spacer, and secure with face fasteners*. Fill space with ASTM C920, Class 35 (min.) sealant.



Inside Corner Metal Trim: Install Nichiha Inside Corner metal trim directly against the inside corner sheathing. Fasten metal trim every 12”-16” in a staggered fashion on alternating flanges.

Remove the shiplapped edges that will be inserted into the trim, treating the cuts, and install panels normally, butting to the Inside Corner trim in moderate contact.

Trim Boards: Install trim boards at inside corner first and then add Single Flange Sealant Backer. Add ASTM C920, Class 35 (min.) compliant sealant to the gap.

*Face fasteners should fully penetrate OSB or plywood sheathing and into the framing whenever possible. Refer to ***Face Fastening Best Practices*** for info on patching face fasteners.

WINDOWS AND DOORS

Window Sills (J-Mold optional): For recessed windows, add a flashing where the panels will terminate so that the top edge is covered or capped.

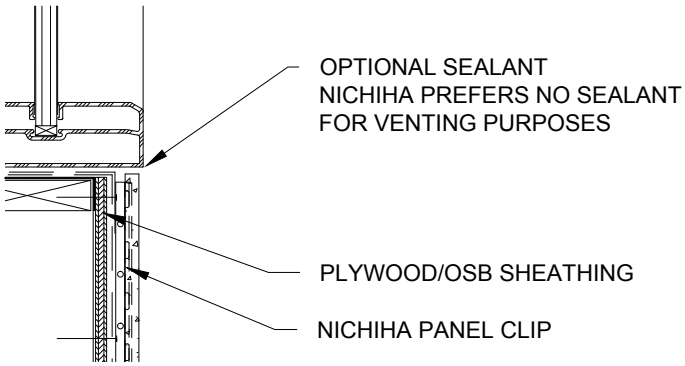
As needed, cut the panel to the required height to fit below the window sill, leaving a 1/4” gap between the top of the cut panel edge and the window sill or trim board.

Cut panel edges must be sealed with 100% acrylic latex exterior primer or paint, such as Kilz Premium or Kilz Max. ***Clean any dust off the panels with a dry, soft clean cloth***.

Fasten Ultimate Clips along the sides of the panel to sheathing, framing, or furring with a clip positioned within an inch of the top end of the panel meeting the sill and the lowest clip at Vertical Starter Track edge.

If the top edge of the panel is fully sheltered under the sill, it is not necessary to seal the 1/4” gap. For better system performance, Nichiha recommends the vented approach.

If desired, install J-Mold trim, fastened every 12”-16”, under the sill prior to panels.



WINDOW/DOOR JAMBS

A minimum gap of 1/4" is required when butting panels into windows, doors, and trim boards. Refer to window/door manufacturer guidelines for spacing trims around windows.

Single Flange Sealant Backer: Install the Single Flange Sealant Backer first, butting to the door/window jamb or trim pieces prior to installing the panels.

The Single Flange Sealant Backer must be fastened a minimum of 12" to 14" o.c. to framing, plywood/osb sheathing, or blocking.

Add 10mm Corrugated Spacer along the jamb.

Remove appropriate ship-lapped edge of panel, clean off dust with soft, dry cloth, and treat cut edge.

Install panels, face fastening through Spacer along the jamb edge every 12"-16", keeping a minimum 1" from panel edge. Use face fasteners long enough to penetrate framing.

Fill gap with recommended sealant.

J-Mold: Pre-install J-Mold trim, fastening every 12"-16", with a 1/4" gap between it and the jamb or per window/door manufacturer instructions

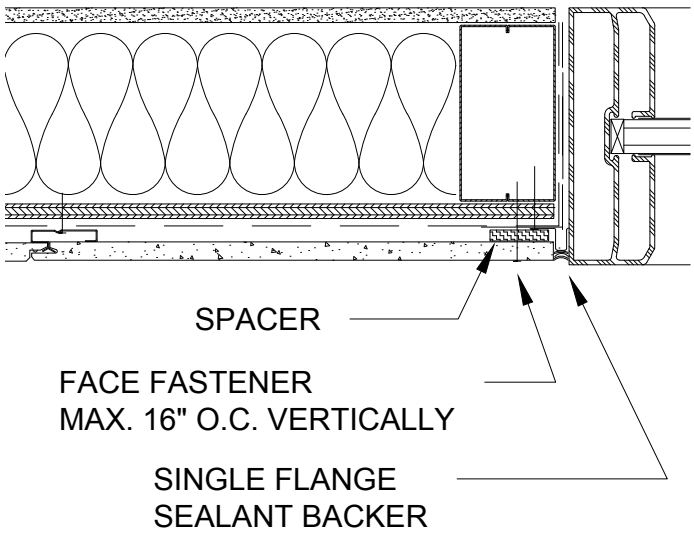
After installing the next-to-last panel, measure from the edge of the face of this panel to the J-Mold edge (the 90 degree angle edge). From this measurement, subtract 1/4" and cut the last panel to this width. Paint or prime cut edges and clean off dust from panel.

Install 10mm Corrugated Spacer next to the metal trim.

Install panels by inserting the cut edge into the metal channel and then shifting the panel over onto the side Ultimate Clips along the adjacent panel, fitting ship-lapped edges together.

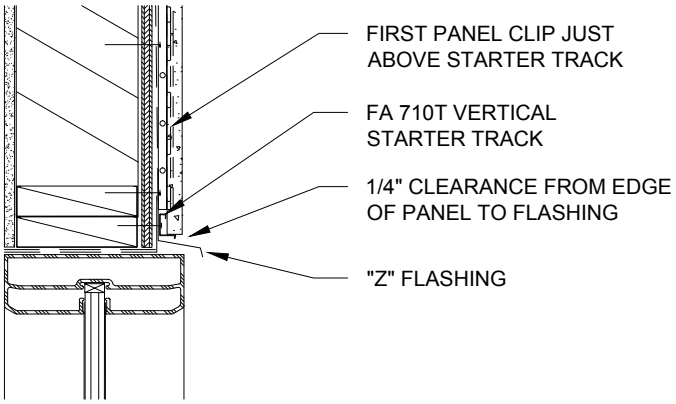
Face fasten through Spacer along the jamb edge every 12"-16". Use face fasteners long enough to penetrate framing.

Lastly, add foam backer rod and sealant to the 1/4" gap, if applicable, between the J-Mold and jamb.



WINDOW/DOOR HEADERS

Starter Track: When starting a course of vertical panels above a window or door, add flashing and FA 710 T Vertical Starter Track at the header, installed with fasteners every 6”-9” into the opening header.



OUTSIDE CORNERS

There are two primary outside corner installation options for vertical AWP3030:

Trim Boards: Fiber Cement, Wood, or PVC

Metal (Open Outside, Corner Key) or Vinyl Trim Channels.

Appropriate flashing must be used as required to prevent moisture penetration at outside corners.

FIBER CEMENT & PVC TRIM BOARDS

Nichiha manufactures a full line of fiber cement trim boards - NichiTrim™, which are available in the Southeast U.S. Refer to Nichiha.com for more information.

When panels are to be butted to fiber cement, wood or other trim pieces, use Nichiha Single Flange Sealant Backer.

Add 10mm Spacer, remove the appropriate panel shiplap, and face fasten panel edge every 12”-16”, vertically, keeping 1” from edge. Apply sealant to joint width. Sealant must be compliant with ASTM C920, Class 35 (min).

METAL & VINYL TRIM

(including Nichiha Corner Key and Open Outside Corner trim)

When installing Nichiha AWP3030 in a vertical orientation, pre-fasten corner trim channels, securing trim to framing every 12”-16”, alternating/staggering the fasteners on both flanges.

At the starting point, such as an outside corner, remove the panel edge, add 10mm Spacer to the wall at the corner. Set the panel on the Starter and into the corner trim channel, and then face fasten the panel as described at the beginning of the *AWP3030 Vertical Panel Installation* section.

Working from left to right, when reaching the next outside corner, follow the steps for the appropriate trim profile:

Corner Key: After installing the next-to-last panel, measure from the edge of the face of this panel to the Corner Key edge (the 90 degree corner angle edge). From this measurement, subtract 1-3/8” and cut the panel to this width. Paint or prime cut edges and clean off dust from panel. (*Fig. 24a*)

Open Outside Corner: After installing the next-to-last panel, measure from the edge of the face of this panel to the Open Outside Corner edge (the 90 degree angle edge). From this measurement, subtract 1/4” and cut the panel to this width. Paint or prime cut edges and clean off dust from panel.

Install 10mm Spacer next to the metal trim. Install panels by inserting the cut edge into the metal channel, rotating into the wall plane, and then shifting the panel over onto the side clips along the adjacent panel, fitting ship-lapped edges together.

Face fasten panels through Spacer along the corner edge every 12”-16”(*Fig. 24b*). Use face fasteners long enough to penetrate framing.

Fit panels into channel trim so that panel edges are not exposed.

Nichiha metal trim pieces are each 10’ in length. To cut metal trim, use a non-ferrous carbide miter saw blade. When butting/stacking metal trim pieces, add a bead of polyurethane sealant at the seam/joint.

Metal trim can be pre-finished when purchased to match Nichiha Color Xpressions color(s). Otherwise, for field painting primed metal trim refer to Tamlyn’s XtremeTrim Painting Guide.

FIG. 24A

FIG. 24B

NON-90 DEGREE CORNERS

Corners other than 90 degrees can be achieved with custom metal trim, butting panels to trim board with a minimum 1/4" sealant gap, or with the use of Double Flange Sealant Backer to set cut panel edges at the desired corner angle. Please contact Nichiha Technical.

VERTICAL CONTROL/EXPANSION JOINTS

All Applications

Because thermal expansion occurs in the long (3030mm) dimension of the panels, Vertical Control/ Expansion Joints are not required for vertical installations of AWP3030.

HORIZONTAL/COMPRESSION JOINTS

All Applications

The module of Vertical AWP3030 necessitates a continuous Horizontal/Compression Joint every 119-5/16" (repeating after each course).
Do not stagger horizontal joints.

Do not span floor lines with panels.

INSTALLING A HORIZONTAL COMPRESSION JOINT

Install Essential Compression Joint Flashing or heavy gauge z-shaped metal flashing or drip cap over the top edge of the course of panels terminating under the Horizontal Compression Joint location. Fasten Essential Flashing at each stud location.

Install Vertical Starter Track over the flashing and check for level. Place Vertical Starter at least 1/2" above the course below and 1/4" above flashing/ trim. A best practice is to add flashing tape to cover the fasteners of the flashing, sealing it to the WRB.

Continue to install panels according to these guidelines with compression joints every 119-5/16" (max).

LARGE OPENINGS

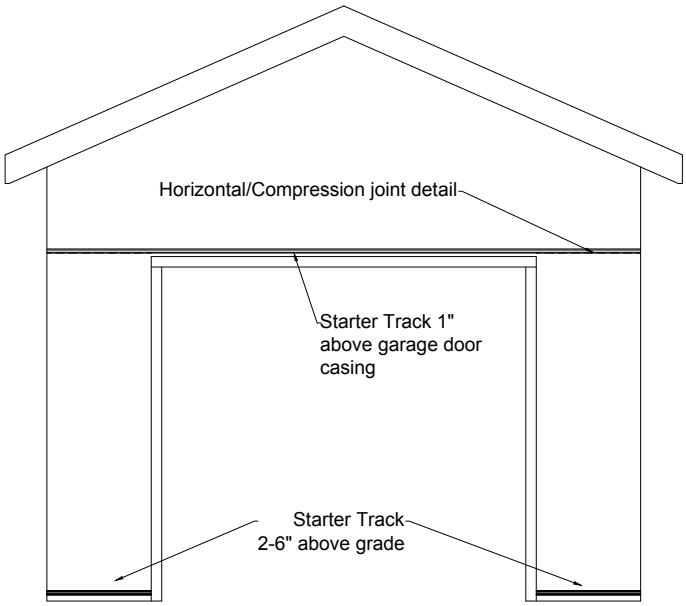
All Applications

Install Vertical Starter Track at the wall base in keeping with standard instructions on both sides of the opening.

Install Vertical Starter Track at the head of the opening, either the width of the opening or all the way across the wall.

Add panels per the standard procedure as in a typical *Window or Door Opening* for the jamb conditions.

Do not span floor lines with panels. Plan for a *Horizontal/Compression Joint* at the head of the opening or above, at the same level where the panels along the sides of the opening terminate, assuming the garage or other large opening is shorter than full length panels.



PENETRATIONS, RAILINGS, AND SIGNAGE

Openings for small penetrations for pipes or conduits may be cut through a panel with the hole sealed with ASTM C920 compliant sealant. For larger penetrations greater than 1-1/2", it is best to block or frame out the opening. Treat the penetration like a small window.

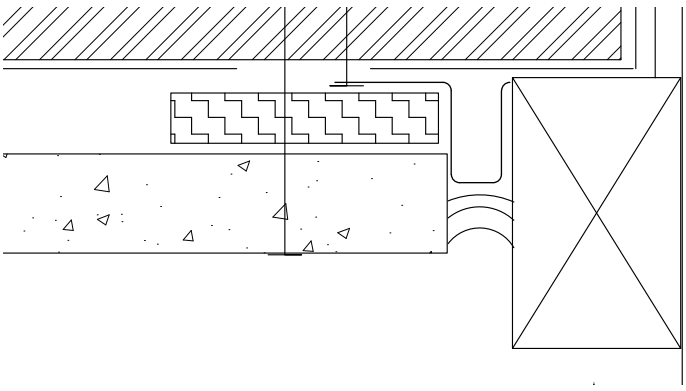
Along the jambs of the opening install Single Flange Sealant Backer. Cut panel edge as needed to butt to Sealant Backer and add recommended sealant.

Underneath the opening block out, terminate panel with 1/4" gap. Sealant here is optional, depending on the depth of the blocking.

Above the penetration, add flashing and install FS1010 Spacer as needed for face fastening panel edge at framing locations. Ensure minimum 1/4" gap between bottom of panel edge and penetration blocking.

Keep any face fasteners 1" away from panel edges.

If installing railings or signage over AWP, ensure fasteners are secured through to framing or other structural support. Do not fasten any attachments solely to panels. Add a small spacer (up to 10mm) between the signage and AWP to prevent moisture pooling on top of the attachment and seeping between it and the AWP, becoming trapped.

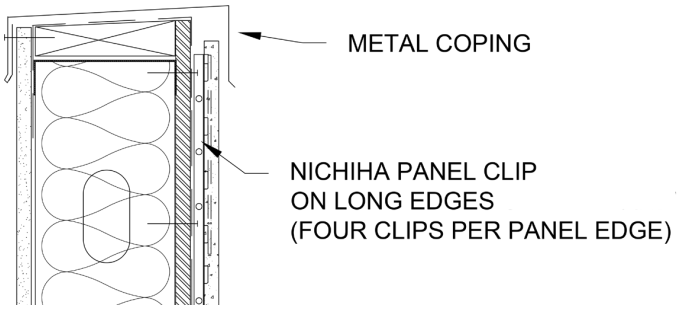


LAST COURSE

All Applications

Cut panels (horizontally) to properly fit at the roof line under soffit or parapet cap (or at the proper transition point). Ensure Ultimate Clips along factory edges are secured no more than 1”-2” from the top of the panels.

Cover top panel row edge with roof cap/coping, where applicable.



GABLE & OVERHANG

Allow a minimum of 1” clearance (as per local building codes) above the roof line.

At the top, cut the panel to follow the slope of the gable or overhang.

When installing soffit, the wall panels should be installed first, with the soffit installed over the panels.

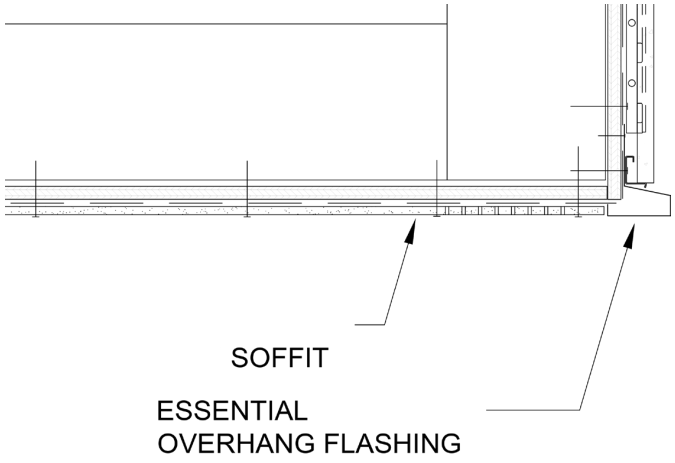
Seal all cut panel edges with 100% acrylic primer or paint. Do not leave any panel edges exposed.

Essential Overhang Flashing may be used at the base of overhangs/bump-outs or porte-cocheres.

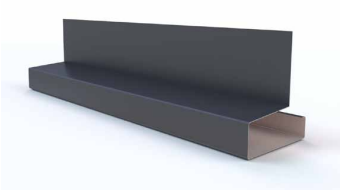
Prior to panel installation, fasten Overhang Flashing at each stud location, beginning with corner segments. Main segments will slide under/overlap corner segments.

Use Joint Clip segments to join main segments together. After first piece is secured, add a Joint Clip, fastening through both it and the first main segment. The next main segment will slide behind the Joint Clip.

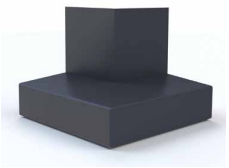
Position Overhang so that its bottom/return flange butts to or overlaps soffit. The bottom return portion must extend beyond the face of the fascia substrate.



Essential Overhang Flashing & Joint Clip



Outside Corner



Inside Corner

TRANSITIONS WITH HORIZONTAL AWP

On projects also utilizing horizontally-installed AWP, expansion and compression type joints will be required as there is no way to naturally joint horizontal and vertical AWP directly.

VERTICAL JOINTS

A Double Flange Sealant Backer or H-Mold trim is necessary at vertical joints/transitions between horizontally oriented panels and vertically oriented ones.

HORIZONTAL JOINTS

A horizontal/compression joint style detail is necessary to transition between horizontal and vertical AWP. Please refer to *Horizontal/Compression Joints* on page 25.

Horizontal panel to Vertical panel Transitions
Face fasten the top, cut edge of the horizontal AWP, cap it with Essential Compression Joint Flashing or Z-flashing. To then install vertical AWP, add the Vertical Starter Track following the standard procedure and fastening requirements.

Vertical panel to Horizontal panel Transitions
Install vertical panels to the desired transition level and cap with Essential Compress Joint Flashing or Z-flashing. Install the Horizontal Starter Track 1-1/4" above the flashing, following the standard procedure and fastening requirements. Refer to the ***Horizontal Installation Guide AWP1818, AWP3030***.

CLEANING & MAINTENANCE

CLEANING PANELS

After completion of the installation or for periodic maintenance, it may be necessary to clean panels.

When cleaning panels, use no more than 400 psi of water pressure at 10" to 12" away. Do not pressure wash custom color panels.

To clean heavily soiled areas, a mild household detergent and/or soft bristle brush may be required.

Do not allow any detergent/cleaner to dry on panels. Rinse immediately after cleaning.

PAINT TOUCH-UP

Touch up paint must be exterior grade 100% acrylic latex and can be color matched by taking a panel sample to your local paint or home improvement store.

A small amount of touch-up paint is supplied with your custom color panel order. Do not use touch-up paint for edge treatment/sealing due to the limited quantity provided.

Utilize low-adhesive tape to isolate patching and touch-up locations such as face fastened areas. Where face fasteners have been used and patched by cementitious filler, use a cotton swab to lightly dab touch-up paint.

For scratches, use a cotton swab for small ones or 1" foam brush for longer ones, again using a dabbing motion rather than brushing in order to minimize the amount of paint applied.

REMOVAL OF EXTERIOR ACRYLIC LATEX PAINT

Wet Paint Removal - While the paint is still wet, flush the area with clean water, using mild abrasion with a clean cloth or soft brush.

Semi-Dry Paint Removal - If paint has set, but not dried, flush and clean as above, followed by light scrubbing with alcohol to remove any remaining paint residue. Rinse with water and a clean cloth.

Dry Paint Removal - Please refer to paint-removal guide in the next section.

OTHER PAINT & GRAFFITI REMOVAL

The following products have been tested on Nichiha panels to aid in the removal of graffiti type markings.* These citrus-based products can also be used for basic panel cleaning purposes. The panels were sprayed with an indoor/outdoor aerosol spray paint and left to dry overnight, and then the paint removal products were applied following the manufacturer's guidelines.

All products tested achieved good results. However, the outcome may vary depending on the amount of paint that needs to be removed. Be sure to follow all manufacturer's guidelines and first test in an inconspicuous area before working on a larger area.

*Do NOT use these cleaners with custom color panels. *Nichiha is not liable for any damage caused by the use of these cleaners.*

CITRISTRIP

www.citristrip.com

Products tested:
Citristrip Striping Gel - One Quart container
Citristrip Stripping Aerosol - 18 oz. spray can

GOOF OFF GRAFFITI REMOVER

www.goof-off.com

Products tested:
Goof Off Aerosol - 16 oz. spray can
Goof Off - 22 oz. trigger spray bottle

TAGAWAY

www.tagaway.com

Product tested:
Tagaway - 32 oz. trigger spray bottle

REPAIRING MINOR DAMAGE

Isolate the blemish with a low adhesive tape such as painters tape. This will help protect the surrounding area of the panel and aide in creating a more polished, clean repair.

Lightly brush/abrade the surface within the taped off area in order to remove any loose material.

Carefully fill and smooth the resultant prepped area with cementitious patching material such as MH Ready Patch. Allow to dry/cure fully.

Gently smooth the patch and then apply touch-up paint to the affected area. Allow touch-up paint to dry and remove the tape.

PANEL REPLACEMENT

Set the depth of the circular saw blade slightly deeper than the panel so the saw blade does not cut into the building wrap or sheathing.

Make cuts into the damaged panel and break into pieces for easier removal.

Remove damaged panel.

If necessary, cut new panel to appropriate height.

Looking at the panel oriented horizontally, cut the top ship-lapped edge off the panel (*Figure 33a*).

Clean off dust and seal the cut edge.

Add 10mm Spacer along the right side of the uncovered wall surface. (*Figure 33b*)

Set the new panel in place on the Vertical Starter Track with the intact factory edge fitting on the exposed clips on the left side of the uncovered space.

Pre-drill and face fasten the right edge of panel through the Spacer with a screw every 12”-16” into framing, furring, or blocking (*Figure 33c*). When only wood sheathing is available for the face fasteners, reduce the screw spacing to 6”-8” o.c.

Fill countersunk screw heads per *Paint Touch Up* and *Minor Repairs*.

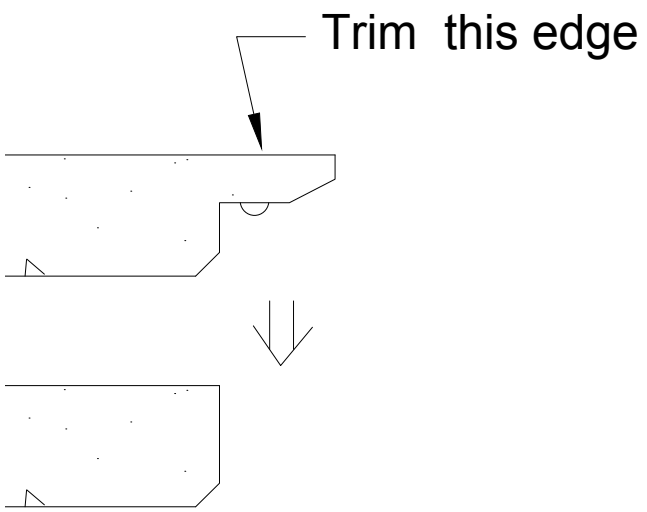

FIG. 33B

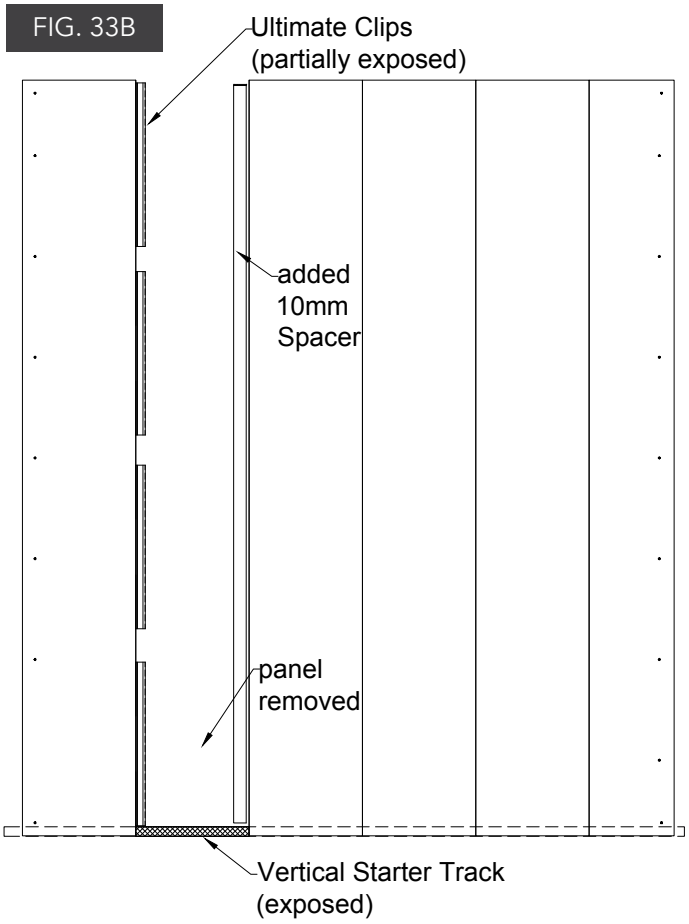

FIG. 33C

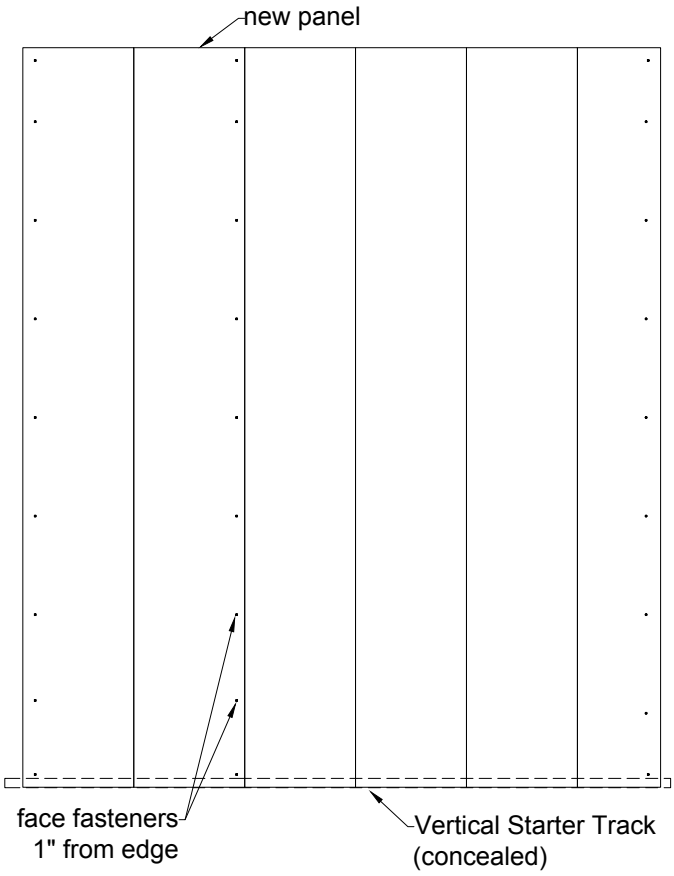


Behind our Architectural Wall Panels is SOME SERIOUS TECHNOLOGY.

EASY INSTALLATION

Time-saving Clip Installation System that reduces construction time and minimizes mistakes.

NO MORTAR, NO MESS

Pre-finished panels that eliminate the need for messy mortar or costly masonry-skilled labor.

ANY WEATHER PRODUCT

Products that can be installed year round in any climate across the country. No geographical restrictions means more possibilities.

LOW MAINTENANCE

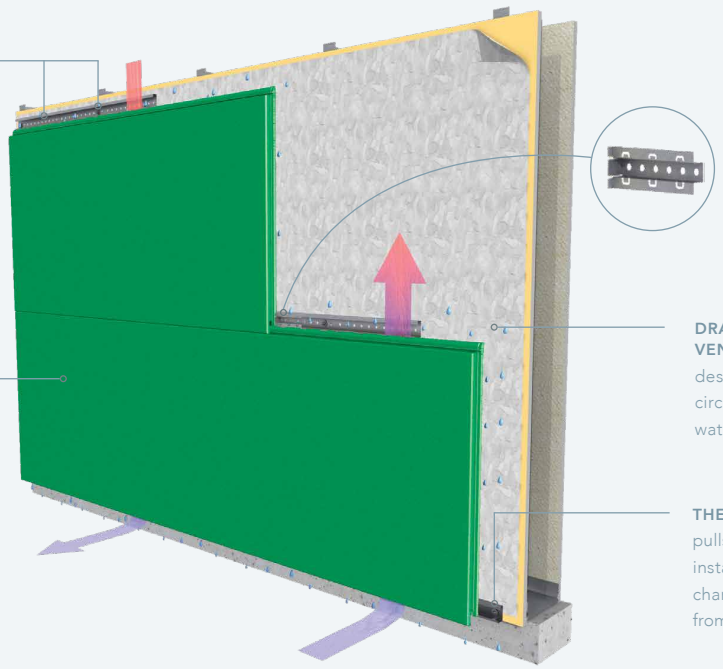
No-fuss products. Little ongoing cleaning or regular maintenance needed. You get to bring your vision to life and ensure it looks great for a long time.

ENGINEERED FOR PERFORMANCE

Go beyond our durable panels and discover a meticulously engineered moisture management system that provides a vertical drainage point for air and moisture to exit.

THE ULTIMATE CLIP
creates a hidden fastening system that all but eliminates face fastening. Installation is quick and easy and never requires specialty subcontractors.

NICHIHA ARCHITECTURAL WALL PANELS
are lightweight, easy to handle and available in a virtually endless color palette and a diverse offering of textural finishes.



NICHIHA'S JOINT TAB ATTACHMENT
is designed to support panel lateral stability, helping vertical joints stay tightly closed. The tab fits in place easily and is fastened to the Ultimate Clip with provided screw.

DRAINED AND BACK VENTILATED RAINSCREEN
design allows water to escape and air to circulate, reducing the risk of mold and water damage inside the building.

THE ULTIMATE STARTER TRACK
pulls double-duty. It ensures a fast, level installation and its patented drainage channel directs water out and away from the base of the wall.

Never underestimate the power of REALLY GOOD TOOLS.

Whether you are an architect, a builder or a contractor, Nichiha wants to ensure that you have all the information you need to make your project go as smoothly as possible. The way we see it, we are partners. Our website offers a comprehensive collection of technical information, installation videos, Architectural details, in-depth specifications and everything you'll ever need to know about installing Nichiha products.

THE POWER OF POSSIBILITIES AND PARTNERSHIPS

Your creative vision is unique. That's why Nichiha wants to offer you the power of cooperation to help your project move from conception to completion. Our ever-expanding offering of textures and finishes lift buildings to new and unexpected places and we want to share them with you. We place a high value on our relationships and are proud to work with our dedicated partners across the country. Join us and discover the power of possibilities and partnerships with Nichiha.

NICHIHA WARRANTIES

- ILLUMINATION SERIES PANELS
  15-year limited warranty* on panels,
  15-year limited warranty* on finish.
- ARCHITECTURAL WALL PANELS
  (Brick, Block, Stone, Wood, Kurastone)
  15-year limited warranty* on panels,
  15-year limited warranty* on finish.
- METAL TRIM
  Tamlyn warrants defective-free products for a period of 10 years for the original purchaser. Please visit tamlyn.com for detailed information on terms, conditions and limitations.

CRYSTALLINE SILICA DUST WARNING: Nichiha products may contain some amounts of crystalline silica [a.k.a. sand, silicone dioxide], which is a naturally occurring mineral. The amount will vary from product to product. Inhalation of crystalline silica into the lungs and repeated exposure to silica can cause health disorders, such as silicosis, lung cancer, or death depending upon various factors. To be conservative, Nichiha recommends that whenever cutting, sawing, sanding, sniping, or abrading the product, users observe appropriate safety protocols. For further information or questions, please consult Nichiha SDS, your employer, or visit osha.gov/silica and cdc.gov/niosh/topics/silica. The SDS for Nichiha products are available at nichiha.com/resources, at your local Nichiha dealer, or through Nichiha directly at 1.866.424.4421. FAILURE TO ADHERE TO OUR WARNINGS, SDS, AND OTHER INSTRUCTION MAY LEAD TO SERIOUS PERSONAL INJURY OR DEATH.

Regarding: Traffic Impact Analysis Letter
Sandy Health Clinic
39831 Highway 26
Sandy, Oregon 97055
PBS Project 71524.000

Dear Mr. Kelley:

This document represents a traffic impact analysis (TIA) letter to meet the submittal requirements of the City of Sandy (City) and the Oregon Department of Transportation (ODOT). The TIA letter was scoped based on consultation with the City, ODOT, and Clackamas County.

PROJECT DESCRIPTION

The Clackamas County Health Department proposes to consolidate its health services from two offices in Sandy, Oregon, to one location. The existing offices are Sandy Health Clinic located at Sandy High School, 37400 Bell Street, and Clackamas County Health Center, located downtown at 38872 Proctor Boulevard. The proposed site has an existing 6,300-square-foot building used as a warehouse that will be replaced with a 9,600-square-foot health clinic. See Figure 1 for a vicinity map.

The site is within the city under its jurisdiction at the northeast corner of the Highway 26/Ten Eyck Road intersection, and the site will send all of its trips through the Highway 26/Ten Eyck Road intersection. See Figure 2 for the site plan. ODOT recommended a TIA be prepared to determine if a right-turn lane is warranted on westbound Highway 26 at Ten Eyck Road. The intersection of Highway 26 and Ten Eyck Road is under ODOT authority, and Ten Eyck Road is under Clackamas County jurisdiction. After contacting each of the three public agencies and holding discussions with Ankrom Moisan Architects, Inc., the TIA was focused toward two intersections: Highway 26 and Ten Eyck Road, related to the need for a westbound right-turn lane, and Pleasant Street and Ten Eyck Road, related to queueing on southbound Ten Eyck Road.

ODOT recommended that, as a condition of approval, a TIA be prepared to determine if a right-turn lane is warranted for westbound Highway 26 at Ten Eyck Road. If a right-turn lane is not warranted, ODOT recommended that the sidewalk along the site frontage of Highway 26 be extended into the roadway in such a way as to eliminate the existing slip lane and define the bicycle lane through the intersection. Figure 3 shows the existing lane configuration of the intersections in the vicinity of the project.

City staff directed PBS to include an evaluation of queueing on Ten Eyck Road to verify it will not block access to Pleasant Street.

TRAFFIC VOLUMES

PBS contracted with All Traffic Data to collect AM and PM peak hour traffic counts for the adjacent streets at Ten Eyck Road/Highway 26, Ten Eyck Road/Pleasant Street (east leg), and Ten Eyck Road/Pleasant Street (west leg). The traffic data were collected on February 19, 2020. Detailed traffic volume reports are provided in Appendix A

Background Growth

Background growth is a generic increase in traffic volumes that either is not attributable to specific developments in process (in process) or is attributable to influences outside the study area. No in process projects contributed trips to the studied intersections. A linear background growth rate of 2.0% per year was applied to 2020 peak hour volumes between public roadways at the studied intersections. The 2.0% growth rate was based on evaluation of ODOT count volumes on Highway 26 through traffic east and west of Ten Eyck Road between 2013 and 2018. The background growth volumes are included in the 2022 build-out year and the 2029 forecast year traffic volumes. Details of the background growth rate estimate are in Appendix A

Seasonal Adjustment Factor

A 28% seasonal adjustment factor (SAF) was applied to the through movements on Highway 26 based on the ODOT *Analysis Procedure Manual*, Version 2 (APMv2). Since no ODOT automatic traffic recorders (ATRs) are located within the study area, and no ATRs offer similar characteristics or reasonable adjustments, the seasonal trend table method was used. The 28% SAF was calculated based on the average of the commuter and summer trends, adjusting from the mid-February counts to the seasonal peak period.[1] Figure 5 presents the 30th highest-volume hour, including the SAF. Details of the seasonal adjustment factor estimate are in Appendix A

Baseline Volumes

The 2020, 2022, and 2029 baseline volumes represent the study area traffic volumes without the Sandy Health Clinic project development trips. The baseline volumes are calculated as the sum of existing traffic, background growth, and season factors. The 2029 forecast year is used to compare to the City of Sandy's Transportation System Plan (TSP).

TRIP GENERATION AND DISTRIBUTION

The following section relies on data provided in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual,* 10th Edition (2017). Detailed trip generation calculations are provided in Appendix B.

Trip Generation

The proposed Sandy Health Clinic will utilize a site with an existing building. The net new trips to the site are based on the replacement of a 6,300-square-foot building used for food distribution and warehouse space with a 9,600-square-foot health clinic. Figure 2 provides a site plan for the proposed site. Trip generation for both the existing warehouse and the proposed health clinic are based on an independent variable of 1,000 square feet in the respective buildings. The trip generation estimates were calculated using the ITE weighted average trip rates for the peak hours of the adjacent streets. Table 1 summarizes the trip generation calculations.

[1] Noting that Highway 26 is a primary route connecting between the Portland metro area and the Mount Hood winter recreation areas, the recreational summer-winter seasonal trend was also evaluated. Averaging the commuter and recreational summer-winter trends, while not an approved blend per ODOT APMv2, also yields a 28% SAF.

Table 1. Trip Generation

ITE Land Use:	Existing Warehouse Code 150		Proposed Clinic Code 630		Net New Trips	
Independent Variable:	1,000 square feet		1,000 square feet			
Size:	6.3		9.6			
Weekday ADT:	11		366		355	
Total Peak Hour Trips:	AM	PM	AM	PM	AM	PM
In:	1	0	27	9	26	9
Out:	0	1	8	22	8	21
Total:	1	1	35	31	34	30

Findings: The proposed Sandy Health Clinic project will generate 355 net new trips on an average weekday, 34 net new trips in the AM peak hour of the adjacent streets, and 30 net new trips in the PM peak hour of the adjacent streets

Proposed Trip Distribution

The proposed distribution of new trips is based on a review of the land uses within the study area, consultation with Clackamas County health clinic staff, and on engineering judgment. See Appendix B for correspondence on the trip distribution of the existing Sandy Health Clinic. All trips from northwest, southwest, and west of the site intersect Highway 26, and approach from the west of the site on Highway 26. All traffic southeast, northeast, and east of the site will approach the site from the east on Highway 26. The overall distribution pattern is proposed as follows:

- 90% to and from the site via Highway 26 from the west
- 10% to and from the site via Highway 26 from the east

The distribution pattern above represents an external distribution of the net new trips entering and exiting the study area. The distribution and assignment of the project's net new trips are shown on Figure 4.

INTERSECTION OPERATIONS AND ROADWAY CAPACITY ANALYSES

Operation Standards

The *City of Sandy Minimum Requirements for Traffic Analysis* cites a minimum level of service (LOS) D for signalized intersections and for stop conditions. The LOS is based on the volume-to-capacity ratio (v/c) for signalized intersections when the development is in full service. ODOT has a mobility standard of a v/c ratio 0.85 for highways categorized as Freight Route on a statewide highway for locations inside an urban growth boundary and a posted speed equal to or under 35 miles per hour (mph).

Analysis Methodology

Traffic impacts were estimated to determine the extent of change in traffic conditions caused by future development. In order to make this determination, the following assumptions were employed:

- The individual peak hour volumes were analyzed for 2020 existing year, 2022 assumed full operation, and 2029 forecast year.
- The analysis is based on the AM and PM peak hour of the adjacent streets.
- No in-process trips were included in the analysis.

- An SAF of 28% increase was applied to the through movement volumes on Highway 26 based on the ODOT APMv2 Seasonal Trend Table method.
- The peak hour factor (PHF) for the overall intersection, as calculated from the count data, was applied for each analysis scenario.
- A minimum value of 2.0% was assumed for each movement in the future conditions for heavy vehicle percentage (HV%).
- As noted previously, trip generation, distribution, and assignment estimates for the project were prepared for the weekday AM and PM peak hours on the surrounding street system.
- Cumulative traffic impacts of the proposed project were determined by superimposing the project-generated traffic onto the baseline volumes for the weekday AM and PM peak hour at studied intersections. This sum is termed the "With Project" conditions.
- The LOS for the signalized intersection was calculated with Trafficware's Synchro software, Version 10, based on *Highway Capacity Manual* (HCM) 6th Edition (2016) methodologies. The ODOT protocol for Synchro analysis at signalized intersections was used to calculate the intersection v/c ratio.
    - Signalized intersection results are reported as the v/c ratio for the intersection.
    - ODOT right-turn lane warrants at a signalized intersection are based on volume threshold and LOS standards per ODOT APMv2.
    - Traffic signal timing values were supplied by ODOT and used throughout the LOS analysis without modification.
    - The analysis includes a 2029 With Project alternative with a right-turn lane for westbound Highway 26.
- No site driveways were analyzed for this report.
- The queueing was estimated for 2029 conditions with and without the project using SimTraffic following ODOT APMv2.
- Right-turn lane impacts on bicycle safety are based on bicycle level of traffic stress (LTS) methodology, noted in APMv2.
- The results of the TIA were compared to the City's TSP related to the Highway 26/Ten Eyck Road improvements.

Level of Service Analyses

Table 2 presents the LOS analysis for the Highway 26/Ten Eyck Road intersection for 2020 existing conditions during the studied peak hours. Detailed LOS calculation reports are provided in Appendix C.

Table 2. Estimated Level of Service at Study Area Intersection for 2020 Existing Conditions

INTERSECTION	AM Peak Hour			PM Peak Hour		
	LOS	Delay (sec/veh)	Intersection v/c Ratio	LOS	Delay (sec/veh)	Intersection v/c Ratio
Highway 26/Ten Eyck Road	A	9.1	0.56	C	20.8	0.67

Finding: The existing Highway 26/Ten Eyck Road intersection operates above LOS standards.

Table 3 presents the LOS analysis for the Highway 26/Ten Eyck Road intersection for 2022 without the project during the studied peak hours. Detailed LOS calculation reports are provided in Appendix C.

Table 3. Estimated Level of Service at Study Area Intersection for 2022 Without Project Conditions

INTERSECTION	AM Peak Hour			PM Peak Hour		
	LOS	Delay (sec/veh)	Intersection v/c Ratio	LOS	Delay (sec/veh)	Intersection v/c Ratio
Highway 26/Ten Eyck Road	A	9.5	0.58	C	21.4	0.70

Finding: In 2022 without the project, the Highway 26/Ten Eyck Road intersection will operate above LOS standards.

Table 4 presents the LOS analysis for the Highway 26/Ten Eyck Road intersection for 2022 with the project during the studied peak hours. Detailed LOS calculation reports are provided in Appendix C.

Table 4. Estimated Level of Service at Study Area Intersection for 2022 With Project Conditions

INTERSECTION	AM Peak Hour			PM Peak Hour		
	LOS	Delay (sec/veh)	Intersection v/c Ratio	LOS	Delay (sec/veh)	Intersection v/c Ratio
Highway 26/Ten Eyck Road	B	10.2	0.59	C	21.8	0.72

Finding: In 2022 with the project, the Highway 26/Ten Eyck Road intersection will operate above LOS standards.

Table 5 presents the LOS analysis for the Highway 26/Ten Eyck Road intersection for 2029 without the project during the studied peak hours. Detailed LOS calculation reports are provided in Appendix C.

Table 5. Estimated Level of Service at Study Area Intersection for 2029 Without Project Conditions

INTERSECTION*	AM Peak Hour			PM Peak Hour		
	LOS	Delay (sec/veh)	Intersection v/c Ratio	LOS	Delay (sec/veh)	Intersection v/c Ratio
Highway 26/Ten Eyck Road	B	11.1	0.64	C	24.0	0.81

*This TIA evaluates the intersection in its existing configuration. The northbound and southbound left-turn lanes called for in City of Sandy's TSP are not evaluated.

Finding: In 2029 without the project, the Highway 26/Ten Eyck Road intersection will operate above LOS standards.

Table 6 presents the LOS analysis for the Highway 26/Ten Eyck Road intersection for 2029 with the project during the studied peak hours. It includes the LOS results with a westbound right-turn lane. Detailed LOS calculation reports are provided in Appendix C.

Table 6. Estimated Level of Service at Study Area Intersection for 2029 With Project Conditions

INTERSECTION*	AM Peak Hour			PM Peak Hour		
	LOS	Delay (sec/veh)	Intersection v/c Ratio	LOS	Delay (sec/veh)	Intersection v/c Ratio
Highway 26/Ten Eyck Road	B	12.0	0.66	C	24.4	0.84
Highway 26/Ten Eyck Road With Westbound Right-Turn Lane	B	11.4	0.66	C	23.0	0.83

*This TIA evaluates the intersection in its existing configuration and with the addition of a westbound right-turn lane. The northbound and southbound left-turn lanes called for in City of Sandy's TSP are not evaluated.

Findings: In 2029 with the project, the Highway 26/Ten Eyck Road intersection will operate above LOS standards. The operation of the Highway 26/Ten Eyck Road intersection will not significantly improve with the installation of a westbound right-turn lane on Highway 26.

Recommendation: Do not install a right-turn lane for westbound Highway 26 at Ten Eyck Road.

The City's TSP calls for left-turn lanes on Ten Eyck Road and Wolf Drive at Highway 26, project M8. This improvement alternative was not evaluated for LOS, but the findings of the evaluation without M8 improvements did not support this relatively expensive improvement. The applicant is advised to maintain the existing 39-foot street width on Ten Eyck Road frontage to allow this improvement in the future.

Finding: Maintain the width of 39 feet on Ten Eyck Road to provide the necessary width a for future left-turn lane.

Queueing Analysis

Table 7 presents the 95th percentile queue analysis for the Highway 26/Ten Eyck Road and Ten Eyck Road/Pleasant Street intersections to verify the queuing at the intersections do not conflict with each other and that the existing lane storage is not exceeded. The queue analysis is based on procedures and settings outlined in ODOT APMv2 when using Trafficware's SimTraffic (Version 10) simulation software. Table 7 includes a column with queue model results with the inclusion of the southbound left-turn lane on Ten Eyck Road, City TSP project M8, between Highway 26 and the east segment of Pleasant Street. The detailed queuing reports are provided in Appendix C.

Table 7. 95th Percentile Queue Analysis for 2029 Conditions

Intersection	Lane/Lane Group	Available Storage[2] (ft)	Weekday AM Peak Hour Queue (ft)			Weekday PM Peak Hour Queue (ft)		
			2029 Without Project	2029 With Project	*Add SB LT Lane*	2029 Without Project	2029 With Project	*Add SB LT Lane*
Highway 26/Ten Eyck Road	EB LT	120	100	125	125	**225**	**250**	**250**
	EB TH	400	250	275	275	375	**475**	**450**
	EB TH	1,000	200	200	200	350	425	400
	EB RT	100	75	50	50	**175**	**175**	**175**
	WB LT	100	0	0	0	50	75	75
	WB TH	1,200	275	275	300	500	500	500
	WB TH+RT	1,200	250	250	275	475	475	475
	NB	275	175	175	175	275	250	250
	SB	120	**200**	**200**	**175**	**325**	**350**	**225**
Ten Eyck Road/Pleasant Street[1]	EB	120	75	50	50	75	100	75
	WB	120	0	50	50	50	125	75

BOLD font indicates the queue exceeds the noted available storage.

[1] The queue lengths are reported for both intersections.

[2] For exclusive turn lanes, the available storage noted represents the length of the full-width lane, exclusive of the taper or transition. For continuous lanes, the available storage noted represents the distance from the intersection stop bar to the next upstream intersection or major driveway.

Eastbound left-turn queues at the Highway 26/Ten Eyck Road signal are anticipated to spill beyond the 120 feet of available storage lane during the PM peak hour, both without and with the project trips. The queue will block the eastbound-to-westbound Highway 26 connector and the ARCO gas station driveway. These queues will be made slightly longer by the addition of the Sandy Health Clinic project trips due to the eight new PM peak hour trips turning left on to Ten Eyck Road.

Eastbound through queues at the Highway 26/Ten Eyck Road signal are anticipated to spill beyond several driveways during the PM peak hour; with the addition of the Sandy Health Clinic project trips, the queues could spill beyond the Revenue Avenue intersection, likely due to the eastbound left-turn lane overflow.

Eastbound right-turn queues at the Highway 26/Ten Eyck Road signal are anticipated to spill beyond the 100 feet of available storage lane during the PM peak hour, both without and with the project trips. The Sandy Health Clinic project trips will have negligible effect on these queues.

Southbound queues at the Highway 26/Ten Eyck Road signal are anticipated to spill beyond the upstream intersections, both without and with the project trips. The queue will routinely block the driveways closest to the intersection (serving the lot on the northwest intersection corner) and the east segment of Pleasant Street. During the PM peak hour, the west segment of Pleasant Street also will be blocked by the southbound queue. The southbound queues will be made slightly longer by the addition of the Sandy Health Clinic project trips due to most trips turning right in the PM peak hour (19 of 21 trips). The queueing is much more impacted by the 2.0%

growth for each turning movement over the next nine years. This may be overly conservative as the 2.0% growth used in this report was based on ODOT through movements on Highway 26.

Finding: The trips from the Sandy Health Clinic do not significantly contribute to the queueing. The addition of a southbound left-turn lane to Ten Eyck Road with the future City project may reduce southbound queues at Highway 26. However, the 95th percentile queues will still extend beyond the east segment of Pleasant Street.

Recommendation: Collect additional turning movement counts in the future to verify the intersection volumes, especially the eastbound left-turn and southbound traffic movements, are growing at 2.0% annually. Reevaluate the queuing with the next TSP update.

SAFETY EVALUATION

The safety evaluation focused on crash history at the existing intersection, bike evaluation, pedestrian safety, and Americans with Disabilities Act (ADA) access.

Traffic Safety

The proposed Sandy Health Clinic was evaluated for traffic safety based on the existing crash history of the Highway 26/Ten Eyck Road intersection, sight distance of driveways, and driveway/intersection spacing. The crash history was reviewed for the last available 5-year period (January 1, 2014 to December 31, 2018). The records show 11 crashes at the Highway 26/Ten Eyck intersection with 6 rear-end crashes (5 of those on Highway 26) and 2 right-angle crashes. None were related to the right-turning vehicles and none were related to bicycles. The intersection crash rate per million vehicles entering is 0.26. The mean critical crash rate for a four leg, signalized intersection in an urban area is 0.40. See Appendix D for the crash history and crash rate calculations.

Finding: The intersection crash rate is lower than the mean critical crash rate. No further investigation is necessary.

The stopping sight distance necessary is based on the existing speed limit and the likely travel speeds on the east leg of Pleasant Street. As a local street, Pleasant Street is assumed to have a 25 mph speed limit, but based on the dead end 450 feet to the east of the proposed site driveway and an intersection of Ten Eyck Road 150 feet to the west of the proposed site driveway, speeds are assumed to be 20 mph approaching the driveway. The stopping sight distance is adequate for looking east and west, but care should be taken not to install landscaping or signs along the site frontage that may restrict sight distance below 200 feet.

Finding: The proposed driveway will meet stopping sight distance standards.

Recommendation: The site plan should take care to maintain approximately 200 feet of sight distance in both directions on Pleasant Street.

The applicant proposes elimination of an existing site driveway on Ten Eyck Road. No crashes were noted associated with this driveway, but removing it will likely reduce risk of crashes in the future. The driveway's proximity to the Highway 26 signal (70 feet) may have contributed to past crashes. The same is true of eliminating the existing driveway on Pleasant Street that is close to Ten Eyck Road but is much less likely to be a safety concern due to the low traffic volume on Pleasant Street.

Finding: The project should improve safety on Ten Eyck Road and Pleasant Street by eliminating two driveways.

Bicycle Safety
The multi-model safety evaluation is related to the bike lane and motor vehicle lane interaction at the westbound bike lane approaching the Highway 26/Ten Eyck Road intersection. The existing and future conditions are evaluated using the bicycle LTS. The westbound Highway 26 approach to Ten Eyck Road has a 135-foot-long taper (slip lane) with a dropped bike lane. The right-turn lane is approximately 50 feet long with a dashed merge area approximately 50 feet long. Based on ODOT APMv2: "*A roadway with no marked bike lanes and a right-turn lane will be a high stress location unless the right-turn lane is short and rarely used. This condition will also occur if a bike lane is dropped ahead of an intersection. If the turn lane is short (less than 75') then there is no impact on the LTS*."

With the development, the right-turn volume will increase from 16 vehicles per hour to approximately 22 vehicles in the AM and PM peak hour. In the AM hours only one bicycle used the westbound bike lane. In the PM peak hours, no bicycles were counted. With the short length of the right-turn lane, there is no impact on the bicycle LTS.

Finding: No mitigation is necessary for the existing slip lane and bike lane due to short length of the lane and the low turning movement volumes.

Recommendation: Make no change to the existing westbound slip lane.

Pedestrian Safety
The current site does not have a sidewalk on the east side Ten Eyck Road. The City has a sidewalk project in process to install a sidewalk on Ten Eyck Road and Pleasant Street, referred to as the *SE Ten Eyck Road & Pleasant Street Curb and Sidewalk Improvements*. The project will provide ADA access to the Sandy Health Clinic.

The project may be modified to reduce the turning radius on northeast corner of the Highway 26/Ten Eyck Road intersection. This will reduce vehicle speeds and provide more area for ramp improvements at the corner. This should improve pedestrian safety.

Finding: The proposed modification to the City's sidewalk project will improve pedestrian safety but not reduce the width of Ten Eyck Road below 36-feet to allow future installation of a left-turn lane.

FINDINGS
The TIA findings are summarized below:

- The proposed Sandy Health Clinic project will generate 355 net new trips on an average weekday, 34 net new trips in the AM peak hour of the adjacent streets, and 30 net new trips in the PM peak hour of the adjacent streets.
- The existing Highway 26/Ten Eyck Road intersection operates above LOS standards.
- In 2022 without the project, the Highway 26/Ten Eyck Road intersection will operate above LOS standards.
- In 2022 with the project, the Highway 26/Ten Eyck Road intersection will operate at above LOS standards.
- In 2029 without the project, the Highway 26/Ten Eyck Road intersection will operate above LOS standards
- In 2029 with the project, the Highway 26/Ten Eyck Road intersection will operate above LOS standards.
- In 2029 with the project, the operation of the Highway 26/Ten Eyck Road intersection will not significantly improve with the installation of a westbound right-turn lane on Highway 26.

- The trips from the Sandy Health Clinic do not significantly contribute to queueing at the Highway 26/Ten Eyck Road intersection.
- Maintain the width of 39 feet on Ten Eyck Road to provide the necessary width a for future left-turn lane.
- The intersection crash rate is lower than the mean critical crash rate. No further investigation is necessary.
- The proposed driveway on Pleasant Street will meet stopping sight distance standards.
- The project should improve safety on Ten Eyck Road and Pleasant Street by eliminating two existing driveways (one on each roadway).
- No mitigation is necessary for the existing slip lane and bike lane due to its short length and low turning movements.
- The proposed modification to the City's sidewalk project will improve pedestrian safety but not reduce the width of Ten Eyck Road below 36-feet to allow future installation of a left-turn lane.

RECOMMENDATIONS

The TIA recommendations are summarized below:

- Do not install a right-turn lane for westbound Highway 26 at Ten Eyck Road.
- Make no change to the existing westbound slip lane.
- Collect additional turning movement counts in the future to verify the intersection volumes, especially the eastbound left-turn and southbound traffic volumes, are growing at 2.0% annually. Reevaluate the queuing with the next TSP update.
- The site plan should take care to maintain approximately 200 feet of sight distance in both directions on Pleasant Street.

CLOSING

Please feel free to contact me at 360.567.2117 or John.Manix@pbsusa.com with any questions or comments.

Sincerely,

John Manix, PE
Senior Traffic Engineer

Subject: RE: PBS Engineers - Traffic Study Question(s)

Hi John
Here are estimates for staff members:

25% trips originate from within the City limits of Sandy
50% trips originate from the west of Sandy
8% trips originate from the north of Sandy
8% trips originate from the east of Sandy
9% trips originate from the south of Sandy

James

Subject: RE: PBS Engineers - Traffic Study Question(s)

James: This is good. Thank you

I will assume that the origin of staff trips will be about the same. If you have anything similar for staff trips that will be helpful.

Subject: RE: PBS Engineers - Traffic Study Question(s)

Hi John
Here are estimates of where patients and clients of the new clinic will originate.
These are based on current patient demographics, information from the Health Resources and Services Administration (HRSA), and information from Medicaid / Oregon Health Plan insurance networks.

If you need anything more, please let me know.

45% trips originate from within the City limits of Sandy
8% trips originate from the west of Sandy (Kelso, Boring)
5% trips originate from the north of Sandy
12% trips originate from the east of Sandy (Mt Hood Village, and Mountain Communities)
30% trips originate from the south of Sandy (Estacada / Eagle Creek)

Have a great morning
James

To: Cockrell, Deborah <DCockrell@clackamas.us>
Subject: RE: PBS Engineers - Traffic Study Question(s)

Deborah: I understand the data will not be easy to produce. If you or the staff can give me a rough estimate of the origin of patrons and/or staff, I would appreciate the effort. It would be best to revise my estimate below in the February 13, 2020 email.

Subject: RE: PBS Engineers - Traffic Study Question(s)

Unfortunately this data will not be easy to produce. We will have to survey staff. JAMES: Can you pull this data for us?
Also, dental is the only new traffic. BH and PC already have a presence in Sandy

Subject: RE: PBS Engineers - Traffic Study Question(s)

Deborah: Thank you. This is good information but more important is the were in the community do the trips to your clinic come from. Please edit my estimate below based on your experience.

For example do most patients and staff live in the Sandy or do they live north, east, west or south of town. This is not an exact process but based on residential density and my experience with the community, here is my estimate:

50% trips originate from within the City limits of Sandy,
10% trips originate from the west of Sandy
10% trips originate from the north of Sandy
20% trips originate from the east of Sandy
10% trips originate from the south of Sandy

For the proposed clinic at Hwy 26 and Ten Eyke Road, I need to know which direction the staff and patience approach the clinic. Feel free to call if you have questions.

Thanks

John Manix, PE
Senior Traffic Engineer

Subject: RE: PBS Engineers - Traffic Study Question(s)

MD will see 18 people per day, 4 days a week.
DMD will see 14 people per day, 4 days a week.
Probably 40 people per day for the therapists.

From: Kelly, Steve
Sent: Tuesday, February 11, 2020 11:33 AM
To: Cockrell, Deborah <DCockrell@clackamas.us>
Subject: PBS Engineers - Traffic Study Question(s)
Importance: High

John Manix of PBS.

Wants to know if we have information of any kind that determines visitors (patients) that are driven to the sites in Sandy. He would need them if they are available for counts for vehicular usage to both clinic sites presently (high school and other location). I am assuming someone else has these numbers or data.

He is getting me a letter with a price today he said.
I will provide him our Professional Services Contract and use his letter as an Exhibit A.

Thanks.

Steve Kelly, Project Coordinator
Clackamas County Community Development

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

RE: SIX SHARED PARKING SPACES ALIGNED ON THE PROPERTY LINE BETWEEN OUR PROPERTIES

Dear Chief Roberts:

This letter is to communicate openly with your office regarding the six shared parking spaces, along your west property line. At the time of our interest in the vacant building (i.e. property) adjacent to your precinct, we were informed by the seller(s) of the existing six shared parking spaces agreement that was established some time ago. The City of Sandy Design Review Process requires the County to maintain the use of the existing six shared parking spaces.

Our architectural firm, Ankrom Moisan Architects, Inc. on our behalf is working with the City of Sandy Planning Office to meet their requirements for our new building design. At this point, we are unaware of an exact start of our construction schedule for the New Sandy Health Clinic. However, the construction project will occur sometime in 2020-2021. As soon as our project is released to the public via the bidding process to contractors, we will alert your office of our planned steps and keep you apprised of an established construction schedule, once we receive bids. Once a general contractor is hired, we will need to use the parking spaces between our property lines for staging for the project. We are hopeful this is an allowable request.

In regards to the shared parking spaces, no employee will park there in the future, once the new building opens to the public. Only patients will be parking in our new lot and periodically using the shared parking spaces. Attached please find the proposed building site plan, which includes the shared parking spaces.

It is the County's full intention to be good neighbors of the Sandy Police Department. If you have questions, I can reach me at my office phone number 503-742-5495. The assigned Project Coordinator is Steve Kelly and his phone number is 503-650-5665. Thank you for your valuable time.

Sincerely,

Deborah Cockrell

GENERAL NOTES - SITE PLAN

1. REFER TO SHEET A0.01 FOR 'PROJECT NOTES' APPLICABLE TO ALL PORTIONS OF THE WORK.
2. GENERAL CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND CONDITIONS PRIOR TO CONSTRUCTION, CONFLICTS ARE TO BE BROUGHT TO THE ATTENTION OF THE ARCHITECT PRIOR TO THE START OF CONSTRUCTION RELATED TO SUCH.
3. REFER TO CIVIL DRAWINGS FOR GRADING AND UTILITY INFORMATION.
4. CONTRACTORS SHALL VERIFY ALL LOCATIONS OF EXISTING UTILITIES, CARE SHOULD BE TAKE TO AVOID DAMAGE TO OR DISTURBANCE OF EXISTING UTILITIES.
5. REFER TO CIVIL AND LANDSCAPE DRAWINGS FOR ALL PUBLIC RIGHT-OF-WAY IMPROVEMENTS.
6. THE CONSTRUCTION SHALL NOT RESTRICT A FIVE-FOOT CLEAR UNOBSTRUCTED ACCESS TO ANY WATER OR POWER DISTRIBUTION FACILITIES (POWER POLES, PULL BOXES, TRANSFORMERS, VAULTS, PUMPS, VALVES, METERS, APPURTENANCES, ETC.) OR THE LOCATION OF THE HOOK-UP.
7. THE CONSTRUCTION SHALL NOT BE WITHIN 10' OF ANY POWER LINES - WHETHER OR NOT THE POWER LINES ARE LOCATED ON THE PROPERTY. FAILURE TO COMPLY MAY CAUSE CONSTRUCTION DELAYS OR ADDITIONAL EXPENSES.

PARKING SPACE LEASE AGREEMENT

This agreement is made and entered into this___ day of_____ , 2020, by and between **Immanuel Lutheran Church** ("Owner") and **Clackamas County** ("County") for the lease of Seventeen (17) parking spaces, in the south parking lot across Pleasant Street from property described as Lots One (1) to including Lot Twelve (12), Block Two (2), Minnie Meinig's Pine View Tracts and commonly known as 39901 Pleasant Street, Sandy OR 97055 (map attached).

Owner represents that it has the right to lease these parking spaces to the County for the County's exclusive use, subject to the following terms and conditions.

1. Term. The lease shall commence on _____, 2020 and shall end on _____, 2027. County shall be allowed use of the spaces between the hours of 6am to 8pm, Monday through Friday.

2. Hold Over. If County shall hold over and remain in possession of said premises after expiration of this Lease without any written lease actually being made, such holding over shall not be deemed to operate as a renewal or extension of this Lease but shall only create a tenancy which may be terminated at any time by Owner upon sixty (60) days written notice to County.

3. Renewal. This Lease may be renewed for successive seven (7) year terms ("Renewal Term") by mutual written agreement of the parties, executed not less than six (6) months prior to the expiration of the Initial Term or any Renewal Term, as applicable.

4. Use. County will use the leased parking spaces only for the parking of vehicles. Owner will provide County with exclusive use of the leased parking spaces, and Owner will provide signage indicating that these spaces are reserved for County use during the hours of operation noted in 1. Above. County shall be entitled to full use and possession of the parking spaces for the entire lease term.

5. Fees and Payment. The annual fee will be $6,000 per year. Payment is due on the first day of _____ and is payable by the 14th day of _____. A late fee of $100 will be assessed on the 15th day of _____ if payment has not been received by the 14th day. No deposit is required. Checks for payment should be made payable to:

Immanuel Lutheran Church
39901 Pleasant Street

Sandy, Oregon 97055

6. Property Taxes and other expenses. Owner is solely responsible for property taxes or other expenses such as electric bill for lighting (if any) on the leased parking spaces.

7. Maintenance. County shall be responsible for any necessary trash collection, sweeping, or maintenance of the leased parking spaces. Owner shall be responsible for all other necessary maintenance of the leased parking spaces.

8. Termination.

a. Either party may terminate the Lease upon occurrence of an event of default. An event of default shall be deemed to occur should any of the following events happen:

1. Failure of County to pay lease fees within 30 days from written notice by Owner to County that lease fees are overdue;
2. Repeated failure of County or its employees to obey reasonable rules of the Owner concerning matters of security, safety, or preservation of the Owner's facilities, during the term of the Agreement; or
3. Failure of either party to comply with any term or condition of this Agreement.

In the event of default, the defaulting party shall be given notice of the default in writing by the other party. The party which has been given notice of default shall have 30 days to correct said default. If the default is not corrected within the 30 day notice period, the other party shall have the right to terminate this lease by giving written notice of uncorrected default and termination to the defaulting party. Any notice shall be given by in writing through certified mail, and shall be effective upon receipt. Notice shall be sent to the address for the receiving party as designated herein.

b. County may terminate this Lease in the event the County fails to receive expenditure authority sufficient to allow County, in the exercise of its reasonable administrative discretion, to continue to make payments for performance of this Lease, or if federal or state laws, regulations or guidelines are modified or interpreted in such a way that County is prohibited from performing under the Lease.

c. Any termination of this Lease shall not prejudice any rights or obligations accrued to the parties prior to termination.

9. Constitutional Debt Limitation. This Lease is expressly subject to the debt limitation of Oregon Counties set forth in Article XI, Section 10 of the Oregon Constitution, and is contingent

upon funds being appropriated therefor. Any provisions herein which would conflict with law are deemed inoperative to that extent.

10. **No Attorney Fees:** In the event any arbitration, action or proceeding, including any bankruptcy proceeding, is instituted to enforce any term of this Lease, each party shall be responsible for its own attorneys' fees and expenses.

11. **Warrant of Authority:** Owner warrants and represents that it is the sole owner of the leased premises subject to this Lease, and that Owner has full authority to execute this Lease. The undersigned warrants and represents that he/she has full authority to sign on behalf of Owner.

ENGINEERING

MEMORANDUM

DATE: 03/23/2020
BY: Norm Scheg
SUBJECT: Stormwater Utility Narrative
PROJECT: Sandy Health Clinic
PROJECT NO.: A19188.10

This memorandum is to outline the stormwater requirements for the Sandy Health Clinic project located at 39831 Highway 26, Sandy, OR 97055. The project consists of construction of a 10,940SF building, 5,291SF of pervious parking lot with associated pedestrian pathways and utilities. The total site is 20,204SF and is predominately impervious with an existing building and parking lot. Post construction we will be collecting roof runoff in downspouts that will be hard piped to a drywell. This drywell is "authorized by rule" by Oregon DEQ as it will infiltrate runoff from roofs and a parking lot of less than 50 vehicles. We will be constructing pervious pavement for the parking area as well. Both of these facilities have been modeled utilizing 2" per hour as a basis for storage sizing. Once the site has been cleared, and before construction of any utilities, a Geotechnical Engineer will be retained to test the actual infiltration rates of the native soils to assure they have at least a design infiltration rate of 2" per hour or more. The drywell sizing will be reviewed at that time to see it the annulus of rock can be reduced. The rock under the pervious pavement is the minimum thickness for structural integrity. Attached are HydroCAD calculations verifying the infiltration systems meets the stated requirements. A comprehensive stormwater plan will be submitted with the next submittal.

RE: CITY OF SANDY
SANDY HEALTH CLINIC (File # 20-006 DR//VAR/DEV/ADJ)
PRELIMINARY REVIEW

Dear Emily:

We have reviewed the preliminary submittal for the above noted development and have the following comments/ recommendations:

1. All earthwork activities shall follow the requirements of the most current edition of the Oregon Structural Specialty Code. Site grading shall not in any way impede or impound or inundate the surface drainage flow from the adjoining properties without a proper collection system. The earthwork activities shall be observed and documented under the supervision of the geotechnical Engineer.

2. The proposed driveway accesses on Pleasant Street shall be Concrete Commercial Driveway Approach constructed in conformance with the applicable City of Sandy driveway detail and meeting PROWAG requirements.

3. Where the existing driveway is removed on Pleasant Street, it shall be replaced with sidewalks and an ADA ramp shall be constructed at the intersection with Ten Eyck Road to current PROPWAG requirements.

4. Ten Eyck Road is a County road, we recommend the county requires sidewalks to be constructed along the entire site frontage to match the existing sidewalks on Hwy 26.

5. A demolition permit shall be required from the City prior to demoing the existing building.

6. We have reviewed the preliminary stormwater calculations that was provided with this submittal. The calculations were found not meeting the water quality/quantity criteria as stated in the City of Sandy Development Code (SDC) 13.18 Standards and the 2016 City of Portland Stormwater Management Manual (SWMM) Standards, that were adopted by reference into the Sandy Development Code. The water quality shall be designed based on 0.19 in/hr rate for 5 minutes time of concentration. While the water quality shall be designed for 2, 5, 10 and 25 year storm events and not 25 and 100 year storm events only. A detailed final report stamped by a licensed professional shall be resubmitted for review with the final construction plans.

7. The proposed 6" sanitary sewer service should be adequate to serve this building, unless the City public works department determines a sanitary sewer service exists and a new one is not needed.

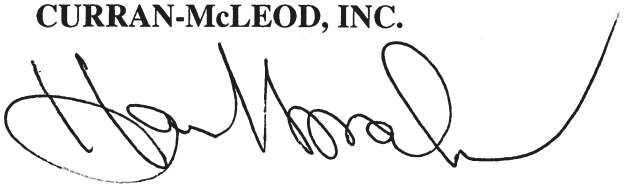
8. The final construction plans shall be submitted to Sandy Fire Department for review and approval to ensure that the proposed vault has adequate fire protection and also acceptable access is provided to the building.

9. The final construction plans shall verify the domestic 2" meter size is adequate based on the meter flow and the building fixture counts found in the 2017 Oregon Plumbing Specialty Code, if larger than 2" meter size is needed shall be verified in the AWWA series 700 and the Oregon Plumbing Specialty Code.

We have no concerns about the proceedings with this project subject to the above stated comments.

Sincerely,

CURRAN-McLEOD, INC.



Hassan A. Ibrahim, P.E.

Hi Emily,

The only comment I have regarding this application is that the new fire department connection (FDC) be relocated to the Mt. Hood Highway side of the proposed fire vault and to be as close as possible to the existing fire hydrant located in that area as possible.

Thank you,

Gary Boyles

SUBJECT: REVIEW OF TRANSPORTATION IMPACT ANALYSIS – SANDY HEALTH CLINIC

Dear Emily:

In response to your request, I have reviewed materials submitted in support of the Sandy Health Clinic in the northeast quadrant of Highway 26 and Ten Eyck Road in the east part of Sandy. The Transportation Impact Analysis (TIA), dated March 12, 2020, was prepared under the direction of John Manix, PE of PBS.

The site, currently occupied by a warehouse, is proposed to have a 9600-square foot health clinic. Access will be on Pleasant Street.

Overall

I find the TIA addresses the city's requirements and provides an adequate basis to evaluate impacts of the proposed development.

Comments

1. ***Study Area.*** The study addresses the appropriate intersections. It includes analyses of:

   - Highway 26 at SE Ten Eyck Road;
   - Ten Eyck Road at Pleasant Street.

2. ***Traffic Counts.*** The AM and PM peak hour traffic counts were conducted during February 2020. The engineer adjusted the traffic counts to account for seasonal variations. The engineer adjusted the February counts by 28 percent to estimate the 30th highest hour traffic volumes. The methodology appears consistent with the procedures defined by the Oregon Department of Transportation (ODOT). The adjusted counts appear reasonable.

3. ***Trip Generation.*** The TIA uses trip generation for a medical clinic and for a warehouse (land use code 630 and 150, respectively) from the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*. The warehouse calculation was used to calculate traffic from the existing use. After accounting for the warehouse, the engineer calculates that the medical clinic would produce 34 net new AM peak hour trips; 30 net new PM peak hour trips; and 335 net new daily trips. The calculation of trips generated by the development appears reasonable.

4. ***Trip Distribution.*** The TIA provided information about trip distribution from the site. Among other resources, the engineer consulted with county medical staff about clients. The engineer assumed 90 percent of the traffic would travel to and from the west on US 26 and 10 percent would travel to and from the east on US 26. The trip distribution seems reasonable.

5. ***Traffic Growth.*** The TIA uses a 2.0 percent annual increase for Highway 26 based on projected volumes from the Transportation System Plan. No adjustments were made for in process developments. The future year background traffic volumes appear reasonable.

6. ***Analysis.*** Traffic volumes were calculated for the intersections cited in #1, above. Intersection level-of-service (LOS) and the volume-to-capacity (v/c) ratio were provided. The intersection of US 26 with SE Ten Eyck Road is signalized; the intersection of Ten Eyck Road and Pleasant Street is stop-controlled. The analyses were conducted for existing 2020 conditions, 2022 background conditions, 2022 with the development, 2029 background conditions, and 2029 with the development.

   The engineer calculated that the intersection of Highway 26 and Ten Eyck Road would operate at LOS B or better and a v/c ratio of 0.66 or better during the AM peak hour. For the PM peak hour, he calculated the intersection would operate at LOS C or better and a v/c ratio of 0.84 or better under all conditions. This meets ODOT's performance standard.

   The engineer did not report the LOS or v/c ratio for the intersection of Ten Eyck Road with Pleasant Street. Both the east leg and west leg approaches of Pleasant Street with Ten Eyck Road were analyzed in a simulation that showed the anticipated queues and blockage time. Due to the low traffic volumes and short predicted queues on Pleasant Street, it is apparent that operations of the intersection will be good even with the proposed development. My own calculations using Synchro indicated the intersection will operate at LOS A, meeting city operational standards.

The engineer provides a thorough discussion of queuing issues using traffic volumes for 2029. During the PM peak hour, eastbound left-turn and eastbound right-turn queues are calculated to exceed available storage both with and without the development. In addition, southbound queues on Ten Eyck Road are expected to block nearby driveways and intersections both with and without the development. The engineer notes that the addition of a southbound left-turn lane may shorten queues. He recommended tracking volumes and queues over time to assess queuing storage needs.

The engineer also evaluated the effect of a westbound right-turn lane on Highway 26 at the intersection with Ten Eyck Road. He determined the performance of the intersection is not significantly different with a turn lane and meets v/c standards without it. He recommends against a westbound right-turn lane. He recommends retaining the existing configuration that features a slip lane.

7. ***Crash Information.*** The TIA provides information on crashes for the most recent available five-year period covering 2014 through 2018.

   At the intersection of US 26 and SE Ten Eyck Road, there were eleven reported crashes. Rear-end crashes were the most common type. This is typical of signalized intersections in an urban area. The intersection has a relatively low crash rate of 0.26 crashes per million entering vehicles. The engineer concluded that no further investigation or mitigation is required. I concur.

8. ***Site Plan and Access.*** The site plan provides for a single access on Pleasant Street near the parcel's east boundary. The TIA indicates safety will be improved by the elimination of two existing driveways serving the site, including one on Ten Eyck Road. The site access is an improvement relative to existing conditions.

9. ***Sight Distance.*** The engineer analyzed sight distance at the proposed access and concludes stopping sight distance is met. He recommends maintaining 200 feet of sight distance at the access.

10. ***Conclusions and Recommendations.*** The engineer concludes that the intersections will meet ODOT and city operational standards for the study area intersections either with or without the development. He also indicates that queuing is not significantly different with or without the development, but that queue storage will be exceeded by 2029 for some movements.

    He found crash rates at the intersection of Highway 26 and Ten Eyck Road to be low and did not recommend further investigation. He concluded that a right-turn lane for

Highway 26 westbound was not warranted and recommended retaining the existing slip lane.

He concluded the reduction in accesses to the site, including the elimination of a driveway to Ten Eyck Road, would be beneficial and improve safety.

He recommended monitoring traffic volumes and queuing at the Highway 26 and Ten Eyck Road intersection and reevaluating the intersection in connection with a future Transportation System Plan update.

I concur with the engineer's conclusions.

Conclusion and Recommendations

Based on the information provided by the applicant, I find the TIA meets city requirements. The engineer used appropriate methods and documents his procedures and conclusions.

The intersections of Highway 26 and Ten Eyck Road and Ten Eyck Road and Pleasant Street are calculated to meet ODOT and city performance standards. I do not find a need for mitigation measures to address traffic impacts of the development or to address safety issues.

To the extent that the developer may be required to implement projects or participate in projects involving facilities under the jurisdiction of ODOT, conditions of approval should be included requiring that the development comply with the requirements standards and procedures specified by ODOT. I recommend that that ODOT requirements and standards associated with frontage improvements where the development abuts Highway 26 be made conditions of approval for the development.

If you have any questions or need any further information concerning this review, please contact me at replinger-associates@comcast.net.

Sincerely,

John Replinger, PE
Principal

Updated ODOT Response

Project Name: Sandy Health Clinic	**Applicant:** Steve Kelly
Jurisdiction: City of Sandy	**Jurisdiction Case #:** 20-006 DR/VAR/DEV/ADJ
Site Address: 39831 US Hwy 26, Sandy, OR 97055	**Legal Description:** 02S 04E 13ad **Tax Lot(s):** 01000
State Highway: US 26	

The site of this proposed land use action is adjacent to US 26. ODOT has permitting authority for this facility and an interest in ensuring that this proposed land use is compatible with its safe and efficient operation. ODOT has reviewed the Traffic Impact Analysis for the proposed medical clinic development and determined that a westbound right turn lane at the US 26/SE Ten Eyck Rd intersection is not warranted.

☒ ODOT has determined there will be no significant impacts to state highway facilities and no additional state review is required.

Please send a copy of the Notice of Decision including conditions of approval to:

M E M O R A N D U M

TO: EMILY MEHARG, ASSOCIATE PLANNER
FROM: MIKE WALKER, PUBLIC WORKS DIRECTOR
RE: FILE 20-006 CLACKAMAS COUNTY HEALTH CLINIC
DATE: JUNE 18, 2020

The following are Public Works' comments on the above-referenced application:

Transportation

The applicant shall improve the US 26 frontage of the site in compliance with ODOT requirements including modifying the existing slip/right-turn lane to reduce the curb radius at the corner to accommodate east-west and north-south ADA compliant ramps if required by ODOT. This may require right-of-way dedication at the NE corner of US 26 and Ten Eyck Rd.

The existing driveway approach onto Ten Eyck Rd. from the site does not meet the minimum spacing standards in 17.98.80(A) of the Sandy Municipal Code (SMC). The applicant shall abandon the existing driveway approach and improve the Ten Eyck Road frontage of the site including but not limited to: curbs, sidewalks, storm drainage, streetlighting, street trees per the requirements in sections 15.20 and 17.84.30 of the SMC. This section of Ten Eyck Rd. is under the jurisdiction of Clackamas County. The applicant shall coordinate with Clackamas County DTD to determine the required section for Ten Eyck. This may include relocating the existing fire hydrant at the intersection of Ten Eyck Rd. and Pleasant Ave. to install ADA compliant access ramps. Ten Eyck Road is a minor arterial street. Both Clackamas County and City of Sandy require minimum 6 ft. wide sidewalks on arterial streets. The County standard and the proposed ultimate section for Ten Eyck Road will only permit a curb tight sidewalk in the available right-of-way.

The City recently designed a pedestrian improvement project on Ten Eyck Rd. at the subject site. The Clackamas County DTD plan review fee has been paid and the plans have been approved by DTD. The applicant will be responsible for these improvements and is welcome to use the approved planset for this work.

The applicant shall dedicate sufficient right-of-way at the SW corner of the site to accommodate the required street section and pedestrian improvements including ADA-compliant ramp(s) at the intersection with US 26. The exact dedication area shall be determined during construction plan review. The applicant shall be responsible for providing legal descriptions and sketch maps of the dedication area, dedicating the right-of-way using the City's standard documents, and pay all recording costs.

The applicant shall remove the existing west driveway approach onto Pleasant St. The existing driveway approach doesn't to meet the minimum spacing standard in 17.98.80(A) SMC or the maneuvering standard in 17.98.70(B). The applicant shall

improve the Pleasant St. frontage of the site including but not limited to: curbs, sidewalks, storm drainage, streetlighting, street trees per the requirements in sections 15.20 and 17.84.30 of the SMC. The sidewalk shall be curb-tight, minimum 8 ft. in width with street trees specified by the City in tree wells on XX foot centers. The sidewalk shall be five feet wide separated from the curb with a five foot wide planter strip including street trees specified by the City on XX foot centers.

Street tree and landscaping placement shall conform to the sight distance recommendations in the traffic impact analysis submitted by the Applicant.

Utilities

The site is served by the existing 16" water main in US 26 and the existing 8" sanitary sewer main in Pleasant St. The applicant is proposing a drywell for stormwater disposal. Typically, the soils in Sandy do not permit treatment and discharge of stormwater in this manner. Stormwater management shall conform to the requirements in the City of Portland Stormwater Management Manual and the requirements in section 13.18 and 13.20 SMC.

Utility and right-of-way improvement plans are submitted with the land use application solely for conformance with the submittal requirements in Section 17.100.60(D). Land use approval does note connote approval of public improvement plans.

Please let me know if you have any questions or need more information.

Hi Emily,

Here is the credit card authorization form.

For the vertical Nichiha siding, Section 17.90.110(B.3.d) allows composite-wood (concrete fiberboard, panels or shingles). The vertical ribbed Nichiha product is a panelized fiber cement product with 1 5/8" vertical slats and 3/8" reveals between each slat which add depth and rustic texture to the façade. The product is available in custom colors that can match any selected Miller or Sherwin Williams paint. The ribbed fiber cement is not the same as board-and-batten siding or T1-11 sheet siding.

The product can be installed either vertically or horizontally. In terms of design, the vertical siding is a darker earth tone and is the bulk of the siding. The vertical orientation was selected to distinguish it from the horizontal redwood Nichiha material pops of warm color at the bumpouts and recesses in the facade. Both siding products are Nichiha so all the siding can come from a single source manufacturer. This will make the construction process smoother and simplify the detailing. The vertical siding has been selected as the main siding, because the vertical orientation is better for cleaning and maintenance over time.

NOTES

1. CURB INLET CATCH BASIN SHALL CONFORM TO CURRENT ODOT/APWA SPECIFICATION. THE INLET SHALL HAVE AN 8" CURB EXPOSURE AT THE GRATE.
2. GRATED INLET SHALL BE POURED IN PLACE. A SHALLOW PRECAST INLET, OR A COMBINATION INLET GUTTER PLATE WITH LID (NEENAH R-3335-B CURB PIECE OR APPROVED EQUAL)
3. CONNECT THE GRATED INLET TO THE CATCH BASIN BY A MINIMUM 12" DIAMETER CONCRETE PIPE GROUTED INTO BOTH SECTONS. A SLOT MAY BE USED IF THE CURB INLET SECTION IS PRECAST AND DESIGNED TO CARRY THE LOADING. A METAL CURB PIECE MAY BE USED.
4. THE CURB INLET CATCH BASIN MAY USE A GB INLET WITH A SINGLE GRATE.
5. AN 18" SUMP IS REQUIRED.
6. ALL METAL PARTS MUST BE HOT DIPPED GALVANIZED AFTER FABRICATION.
7. THE LATCH SPRING MUST HAVE 50 LB. OF COMPRESSIVE STRENGTH.
8. SPECIFICATIONS FOR CONCRETE AND MISC. MATERIALS USED IN CONSTRUCTION SHALL CONFORM TO THE CURRENT ODOT/APWA STANDARD SPECIFICATIONS.
9. CONCRETE SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 3300 PSI IN 28 DAYS.

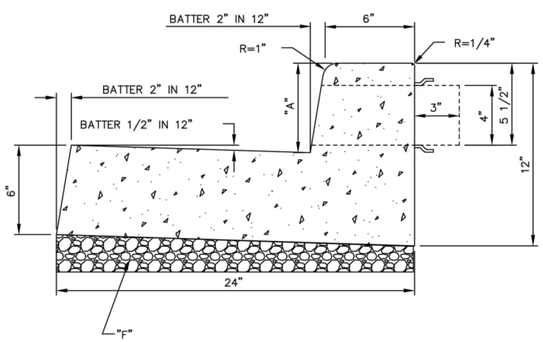
N.T.S.



NOTES

1. SPECIFICATIONS FOR CONCRETE AND MISCELLANEOUS MATERIALS USED IN CONSTRUCTION SHALL CONFORM TO CURRENT OREGON STANDARD SPECIFICATIONS FOR CONSTRUCTION.
2. CONCRETE SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 3300 PSI IN 28 DAYS, 2" TO 4" SLUMP.
3. 4" PLASTIC PIPE SHALL HAVE A BELL OR A 3" EXTENSION, FOR FUTURE HOOK-UP.
4. EXPANSION JOINTS, MAX. 45' SPACING AND AT BEGINNING AND END OF CURVES OR AS DIRECTED.
5. CONTRACTION JOINTS, MAX. 15' SPACING AND AT LOCATIONS AS DIRECTED.

NOTES

1. CONCRETE AND MISC. MATERIALS USED IN CONSTRUCTION SHALL CONFORM TO CURRENT OREGON STANDARD SPECIFICATIONS FOR CONSTRUCTION. DETECTABLE WARNINGS ON WALKING SURFACES AS PER ADA REQUIREMENTS.
2. DETECTABLE WARNINGS SHALL CONSIST OF RAISED TRUNCATED DOMES WITH A DIAMETER OF NOMINAL 0.9 in (23 mm) A HEIGHT OF NOMINAL 0.2 in (5 mm) AND A CENTER-TO-CENTER SPACING OF NOMINAL 2.35in (60mm) AND SHALL CONTRAST VISUALLY WITH ADJOINING SURFACES, EITHER LIGHT-ON-DARK, OR DARK-ON-LIGHT. THE MATERIAL USED TO PROVIDE CONTRAST SHALL BE AN INTEGRAL PART OF THE WALKING SURFACE. DETECTABLE WARNINGS USED ON INTERIOR SURFACES SHALL DIFFER FROM ADJOINING WALKING SURFACES IN RESILIENCY OR SOUND-ON-CANE CONTACT.
3. EXPANSION JOINT SPACING EVERY 45' MIN. OR AT EQUAL INTERVALS CORRESPONDING TO CURB LINE. CONTRACTION JOINT EVERY 15'. TOOLED JOINT EVERY 5 FEET.
4. THE SURFACE FINISH SHALL BE CROSS BROOMED.
5. CONCRETE SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 3300 PSI IN 28 DAYS.
6. APPROVAL MUST BE OBTAINED FROM ENGINEERING FOR SIDEWALK AT ANY LOCATION IN THE PUBLIC ROAD R/W.
