Your utility bill last month included a copy of the Consumer Confidence Report (CCR) for the City's water system. There was an error in the table reporting the highest Total Trihalomethanes (TTHM) value detected. The value was reported as 0.653 parts per million (ppm) but the actual value detected was 0.0653 ppm. The actual value is 10 times **less** than the value reported. The corrected table should read as follows:

Disinfection By-Products – (All Sources)				
CONTAMINANT	MAXIMUM AMOUNT DETECTED	MAXIMUM CONTAMINANT LEVEL (MCL)	MAXIMUM CONTAMINANT LEVEL GOAL (MCLG)	SOURCE OF CONTAMINATION
Total Trihalomethanes (TTHM) mg/l	0.0653 mg/l	0.080 mg/l	N/A	Reaction between chlorine and organic matter in water
Total Haloacetic Acids (HAA5) mg/l	0.0853 mg/l	0.060 mg/l	N/A	Reaction between chlorine and organic matter in water

Please contact Mike Walker at 503-489-2162 if you have any questions regarding this error.
